

## Central Statistics Office Waste Generation Survey 2016

### Survey Booklet

This survey booklet has been prepared by the CSO to assist you with identifying the List of Waste (LoW) code for each type of waste your company generates.

This document should provide you with the information you need to find waste codes for each of your waste streams. The document contains various tables to help you to code your waste as well as general notes on completing the survey return. The CSO has used material from the Environment Protection Agency (EPA) and the U.K. Environment Agency (Thesaurus) in preparing the booklet.

#### General notes

- Please read these general notes before starting to complete the survey.

#### Table 1: Steps to find the correct List of Waste code

- Please use this table to become familiar with the recommended approach for identifying the correct list of waste code for each waste stream generated by your business.

#### Table 2: List of Waste chapters

- This table gives a summary listing of the 20 List of Waste codes chapters.

#### Table 3: Weight estimates for various bins and liquids

- This table outlines average weights in tonnes for various bins and for liquids. Please use the more precise information on your invoice if your waste collector weighed the bins collected.

#### Table 4: Recovery and Disposal Operations Codes

- This table gives more precise descriptions for recovery and disposal operations for waste that was treated on an enterprise's own premises.

#### Table 5: Detailed List of Waste codes and descriptions

- The waste codes listed are the List of Waste (LoW) codes. They include both hazardous and non-hazardous wastes. The table presents the full six-digit codes in each chapter along with the detailed text describing the waste streams relating to each code.

#### Table 6: Alphabetical waste stream look-up list

- This table contains a list of commonly used descriptions for waste streams. The table can be used as an aid to identifying the possible LoW codes for a particular waste but it is not a complete list and should not be relied upon as the sole means of coding. The correct code will depend on the precise origin and nature of the waste and should be determined using the steps set out in Table 1. It can be used to help you short-list possible LoW codes for each waste stream. If you find a matching description then check the detailed description of the waste stream code in Table 5. Please bear in mind whether the chapter corresponds with the activity your company engages in.

#### CSO Helpline

- If you are not able to identify a 6-digit code for a waste item, please contact the CSO Helpdesk for the survey at **01 4984213** or email us at **wgs@cso.ie**

## 1. General notes

### 1.1 Using invoices from your waste operator

You should use invoices from your waste operators to identify the waste streams generated on your premises during 2016. These invoices should provide details such as the six-digit waste code for each waste stream. The invoices may include a weight for the waste collected. Normally these weights are provided in kilograms (to convert to tonnes divide by 1,000).

### 1.2 A building management company collects the waste

If there is no separate invoice available for your company then please use the bin weights in Table 3 to make an estimate of the quantity of waste generated by your company.

### 1.3 Construction and demolition waste

If a contractor carried out C&D work at your company, the contractor, and not your company is to report the C&D waste generated. However, if your company carried out the construction and demolition work on its own premises, then you should include details of the C&D waste generated in your survey return.

### 1.4 Local Authority returns

Local Authorities should only include their own waste generation including street sweepings. Exclude waste generated by activities carried out by contractors on your behalf, material collected at civic amenity sites and bring banks (as the material is only stored there); and information on sludges from wastewater treatment plants.

### 1.5 Waste Electrical and Electronic Equipment (WEEE) returns by customers

Retailers should include WEEE returns in their figures.

### 1.6 Survey questions

- **CSO reference number:** You can find this number on your covering letter. It begins with the letters *EN*.
- **List of Waste Codes::** See Table 1 for information on how to identify these codes.
- **Description of waste:** This will help the CSO to validate each waste code.
- **Tonnes:** Please report all quantities in tonnes (three decimal places can be used). See Table 3 for methods for estimating the weight.
- **Location of waste treatment:** This question ascertains where the waste was treated.
- **On-site treatment operation:** If the waste was treated on your premises then complete this question to indicate the treatment method used.

**Table 1: Steps to find the correct List of Waste code**

Step	Action
1	<p>All waste streams are represented by a six digit code. The first two digits represent chapters. There are 20 waste stream chapters (see Table 2). Hazardous wastes have an asterisk (e.g. 03 01 04*, 03 02 01*) after the sixth digit. To find a correct code, you need to know the following details about the waste:</p> <ul style="list-style-type: none"> <li>➤ the type of business that produced the waste (e.g. manufacture of pharmaceuticals);</li> <li>➤ how the waste arose, i.e. the process/activity that produced it (e.g. emptying kegs of inert filler for tablet manufacture);</li> <li>➤ a full description of the waste (e.g. empty cardboard kegs);</li> <li>➤ what the constituents of the waste are (e.g. 80% cardboard, 15% steel, 5% polythene);</li> <li>➤ the concentration of any dangerous substances and descriptions of the risks associated with each substance; and</li> <li>➤ the hazards that are associated with the waste.</li> </ul>
2	<p>Look at chapters 1-12 and 17-20 to identify the source generating the waste. If the production unit that generated the waste is classified in one of those chapters then examine the sub-chapters (digits 3-4) descriptions and the most detailed headings (digits 5-6) to identify the appropriate six-digit code for the particular waste stream. Avoid miscellaneous codes if possible i.e. those ending with 99.</p> <p>Not all waste streams from the same production unit should be coded to the same chapter. For example, a car manufacturer may produce wastes belonging to chapter 12 (wastes from shaping and surface treatment of metals), 11 (inorganic wastes containing metals from metal treatment and the coating of metals), and 08 (wastes from the use of coatings).</p> <p>Chapters 06-08 include many wastes from the supply and use of chemicals and coatings in addition to wastes from their production. General wastes and materials not specifically associated with a single process may belong in other chapters.</p> <p>Chapter 17 lists construction and demolition wastes and this chapter could be relevant for waste streams from all business sectors, although take note of point 1.3 above.</p> <p>Chapters 18 and 19 cover wastes produced from healthcare, waste management, and water treatment activities. Wastes that are treated onsite at the point of production (unless it is an authorised waste management facility) should not use codes from chapter 19 of the LoW. Healthcare wastes are listed under chapter 18 of the LoW. Clinical waste is not a category in the LoW but it is likely to pose a risk of infection or physical injury. If the waste requires specialist treatment or disposal (including heat treatment or incineration) due to the infection risk posed it should be considered Hazardous Infectious Waste and coded as <i>18 01 03* - wastes whose collection and disposal is subject to special requirements in order to prevent infection</i>.</p> <p>Animal carcasses arising from veterinary activity are a healthcare waste. Those that pose no infection risk, and are therefore not clinical waste, should be listed as <i>18 02 03 - wastes whose collection and disposal is not subject to special requirements in order to prevent infection</i>. Those that are a clinical waste, due to a risk of infection, should be listed as <i>18 02 02* - wastes whose collection and disposal is subject to special requirements in order to prevent infection</i>.</p> <p>Animal and human hygiene wastes that arise from activities that are not related to</p>

	<p>healthcare should not be coded using chapter 18, for example:</p> <ul style="list-style-type: none"> <li>(i) non-clinical, municipal wastes, such as feminine hygiene waste from shops and offices and dog faeces from collection bins, should be coded using <i>20 01 99 – other fractions not otherwise specified</i> but should be described fully e.g. feminine hygiene waste not from healthcare not subject to special requirements in order to prevent infection; and</li> <li>(ii) sharps waste arising from non-healthcare activities, such as tattooing, cosmetic ear or body piercing and from substance abuse (where not arising from healthcare) should also be coded 20 01 99. Other sharps such as those that have been used by diabetics are a healthcare waste and should be coded under chapter 18.</li> </ul> <p>Chapter 20 lists municipal wastes but some of these codes can apply to other business sectors if a similar material does not appear in chapters 01-15. <b>Mixed Residual Waste should be reported under code 20 03 01. Mixed dry recyclables should be reported under code 20 03 01.</b> Care should be taken when using code 20 03 01 to accurately describe the waste as either mixed residual waste or mixed dry recyclable waste. Use code 20 01 08 for food waste from retailers and restaurants including left-overs (chapter 02 only applies to food produced in a factory).</p>
<b>3</b>	<p>If an appropriate waste code cannot be found in chapters 01-12 or 17-20, then the next step is to examine chapters 13-15.</p> <p>Chapter 13 lists oil and fuel waste. For non-municipal arisings of waste oil, this chapter should be referred to before using LoW code 20 01 26*.</p> <p>Chapter 14 lists solvents, refrigerants and propellants. However, chapter 07 should be reviewed first for solvents arising from chemical production, formulation, supply or use. Chapter 08 should be referred to for solvents arising in paints and adhesives. Chapter 14 is the preferred chapter for all other, non-municipal, arisings of solvents.</p> <p>Chapter 15 lists packaging, filters, absorbents and protective clothing. <b>All packaging should be recorded under chapter 15, irrespective of the sector from which it arose, and not in 20 01.</b> Chapter 15 also includes codes for absorbents, contaminated wiping cloths and protective clothing. These wastes could arise from any business sector.</p>
<b>4</b>	<p>If none of those waste codes properly describes the waste, try to identify whether the waste is described in chapter 16.</p> <p>Chapter 16 lists a number of miscellaneous wastes, including sub-chapters for end-of-life vehicles, waste electrical equipment, batteries, transport tank washings, explosives, catalysts, oxidants, lab chemicals and gases, refractories and unused or off specification products. Again, these wastes can have matching codes e.g. in the municipal chapter (chapter 20), so if e.g. batteries arising from your company are similar to those from a household, use a chapter 20 rather than a chapter 16 code.</p>
<b>5</b>	<p>If a suitable code still cannot be found, choose a 99 code from the chapter identified in Step 1. The List of Wastes contains many 'codes ending in 99' which are described as 'not otherwise specified'. '99' codes must only be used where no other suitable six-digit code can be found.</p>

**Table 3: Weight estimates for various bins and liquids**

Converting litres to tonnes requires knowing the specific gravity of the liquid. A 1,000 litres of a liquid with density of 737 kg/m<sup>3</sup> will have a mass of 737 kg. Water has a density of 1,000 kg/m<sup>3</sup> so 1 litre weighs 1 kg.

Websites such as <http://www.thecalculatorsite.com/conversions/weighttovolume.php> may be of assistance if your waste operator cannot tell you.

The weight in the table below is given in kilograms. Please divide by 1,000 to convert to tonnes which is the unit that should be entered in the questionnaire.

Type	Bin size	Typical weight when full
General residual waste	80 litres	18 kg
General residual waste	140 litres	20 kg
General residual waste	240 litres	30 kg
Recyclables (highly variable)	140 litres	8 kg
Recyclables (highly variable)	240 litres	16 kg
Recyclables (highly variable)	1100 litres	60kg
Organic bin	140 litres	38 kg
Organic bin	240 litres	100 kg
Bag of mixed waste		3.5 kg to 6.5 kg

Estimates of skip weights are included in the table below.

Skip size	Average weight when collected
Small	700 kg
Medium	1,000 kg
Large	1,400 kg

**R11a Backfill** (including infill or use of waste as daily cover at landfills).

EU legislation defines backfilling as *a recovery operation where suitable waste is used for reclamation purposes in excavated areas or for engineering purposes in landscaping and where the waste is a substitute for non-waste materials*. It is very important to give the breakdown between Soil and stone (List of Waste code 17 05 04) and any other construction and demolition waste materials that may have been backfilled. For example, if crushed concrete was backfilled along with Soil and stone, the two must be reported separately under their respective List of Waste codes.
