Output, Input and Income in Agriculture 2012 – Advance Estimate

| | Goods Output | Intermediate Consumption | Net Subsidies | Operating Surplus |
|------------------------------|--------------|--------------------------|---------------|-------------------|
| 2010 | €5,397m | €4,277m | €1,649m | €1,868m |
| 2011 | €6,308m | €4,853m | €1,814m | €2,437m |
| 2012 | €6,535m | €5,189m | €1,649m | €2,183m |
| % change ('11 on '10) | +16.9% | +13.5% | +10.0% | +30.5% |
| % change ('12 on '11) | +3.6% | +6.9% | -9.1% | -10.4% |

Agricultural operating surplus estimated to decrease by 10.4% in 2012

The CSO's first estimate of operating surplus in agriculture in 2012 shows an annual decrease of 10.4%. This follows a 30.5% increase in 2011. The estimate for 2012 is based on the data currently available for the year. *See table 1.*

Comparing 2012 with 2011 shows the following changes in estimated value:

- ◆ Goods output at producer prices increased by 3.6% or €226.9m
- ◆ Milk output decreased by 13.0% or €238.0m
- ◆ Cattle output increased by 15.8 % or €282.8m
- ◆ Pigs output increased by 9.8% or €38.5m
- ◆ Cereals output decreased by 4.9% or €14.2m
- ◆ Total intermediate consumption increased by 6.9% or €335.7m
- ◆ Feedingstuffs increased by 15.1% or €177.9m

The value of *subsidies less taxes on production* decreased from €1,825m in 2011 to an estimated €1,661m for 2012. Note this figure includes subsidies already paid and those scheduled to be paid by the Department of Agriculture, Food and the Marine by year end.

The figures for 2012 are an advance estimate which is provisional and is based on the latest available data. They are subject to revision once the complete set of data for the full year becomes available. The Final Estimate of Output, Input and Income in Agriculture for 2012 will be available in June 2013.

Background notes

Introduction This release contains advance estimates of agricultural accounts for 2012. Three estimates are prepared in each 12-month period for the agricultural accounts. The first or advance estimates are generally released in early December of the reference year for which the accounts are prepared. In February of the year following the reference year preliminary estimates are prepared. These update the first estimates using the results of the December Livestock Survey and other updated data sources. In June of the year following the reference year the final estimates of the agricultural accounts are prepared. The estimates are based on a methodology arising from the revision of the System of National Accounts in 1995. For details of this methodology see the “Output, Input and Income in Agriculture” release of 2 July 2002. For details of data sources see the corresponding release of 24 June 2004.

http://www.cso.ie/releasespublications/documents/agriculture/2003/oiifin_2003.pdf

Producer price This is the price received by the farmer for his agricultural produce. It is sometimes referred to as the farm-gate or ex-farm price. It excludes VAT.

Subsidies and taxes on products Subsidies and taxes on agricultural products are those paid or levied per unit on a good or service produced or imported. Examples of subsidies on products are the suckler cow premium and the special beef premium. The bovine disease eradication levy is an example of a tax on products. These subsidies and taxes are included in the calculation of agricultural output.

Other subsidies and taxes on production Other subsidies on production are subsidies other than those on products. Examples are the single payment scheme, the rural environmental protection scheme and the area based compensatory allowance scheme. Taxes on production consist of VAT over-/under-compensation from farmers who have opted for the flat rate VAT system, and motor taxation paid by farmers. Other subsidies less taxes on production are not included in the calculation of output, but are included in the calculation of operating surplus.

Net subsidies Net subsidies are subsidies on products plus subsidies on production less taxes on products and taxes on production.

Basic price The basic price corresponds to the *producer price* plus any subsidies directly linked to a product minus any taxes on products. VAT is excluded.

Valuation of stock changes For each category, the difference between closing year stocks and opening year stocks is valued at the average producer price for the year.

Forage plants The production of forage plants is valued as part of output. Silage and hay are the main items in this category. Direct sales of cereals between farms and use of cereals within farms are also included under forage plants. These items are also treated as intermediate consumption with minor exceptions, such as sales of straw to racing stables.

Contract work Activities performed by agricultural contractors directly linked to the production of agricultural products (for example harvesting) are an integral part of agriculture. The value of such work is included as output and also as intermediate consumption. Estimates of the input costs incurred by agricultural contractors in the provision of their agricultural service are included under the appropriate intermediate consumption categories, as well as in the compensation of employees figure.

FISIM Financial intermediaries (mainly banks) charge explicit commissions and fees for their services to customers, as well as implicit ones by paying and charging different rates of interest to borrowers and lenders. The revenue from the margin on lending and borrowing by financial intermediaries is described as financial intermediation services indirectly measured (FISIM). The inclusion of FISIM in the table is in line with recommended EU national accounting conventions. It is a reallocation to intermediate consumption of part of the interest paid by farmers. While the inclusion of FISIM will increase intermediate consumption and decrease gross value added, it will decrease, by the same amount, the figure shown for interest paid.

| | |
|----------------------------------|---|
| Fixed capital consumption | This relates to the foreseeable wear and tear and obsolescence of fixed capital goods. It is calculated on the basis of the probable economic life of the asset. It is not calculated for breeding livestock or for non-produced assets such as land. |
| Compensation of employees | This includes remuneration in cash and in kind. It does not include the remuneration of work undertaken by the farmer or by non-salaried family farm members. |
| Operating surplus | The operating surplus figure is comprised of the operating surplus earned by farmers and that earned by agricultural contractors. It is calculated before deductions for interest payments on borrowed capital and before deductions for land annuities and for rent paid by farmers to landowners for the use of their land. |
| Entrepreneurial income | Entrepreneurial income is comprised of operating surplus less interest payments on borrowed capital and land rental paid by farmers to landowners. |
| Volume indices | These are calculated by first applying base year prices (2005) to current year quantities for 2011 and 2012. Then the volume index for 2012 is calculated by comparing the total value in 2012 at 2005 prices against the total value in 2011 at 2005 prices. |
