## CÚNNNTAS

DO

RISTEÁRD UA MAOLCHATHA, AIRE UM RIALTAS ÁITIÚIL.

A CHARA,

I have the honour to submit my Annual Report on the Marriages, Births and Deaths registered in Saorstát Éireann, during the year 1926.

In this Report, as in the Reports for each year since 1923, the Births and Deaths shown for the various administrative areas are corrected for those occurring in institutions.

## GENERAL SUMMARY.

The results for 1926 show reductions in the numbers of marriages, births and deaths registered, and in the net number of emigrants returned, as compared with the preceding year.

The marriages registered during the year under review numbered 13,570, being 250 less than the number in 1925.

There were 61,176 births, showing a reduction of 893 as compared with the preceding year.

The number of deaths was 41,740, being 1,910 under the number for 1925.

Tuberculosis caused 4,362 deaths, this number being the lowest ever recorded for Saorstát Éireann area.

The deaths from cancer, on the other hand, numbering 3,021, show an increase of 118 over the annual number previously the highest ever recorded, viz., 2,903 in 1924.

To heart diseases 4,656 deaths were attributed. This number is 309 below that registered in 1925.

Deaths from bronchitis numbered 2,433 or 221 below those recorded for 1925. Pneumonia caused 2,314 deaths, being 24 below the low number registered in 1925.

The infant mortality in 1926 for the entire area was 74 per 1,000 births, which was 6 per 1,000 above the rate for 1925, viz., 68 per 1,000. The rate for rural areas was 56 per 1,000 and for urban areas 110 per 1,000 births.

TABLE I.—Showing for each of the years 1916-26 the estimated Population\* of SAORSTÁT ÉIREANN area; the number of MARRIAGES, BIRTHS and DEATHS registered, with the rates per 1,000 of the estimated Population represented thereby; and the averages for the ten years, 1916-1925; also particulars relating to Northern Ireland for the year 1926.

### EMIGRATION AND IMMIGRATION.

From returns kindly furnished by the Ministry of Industry and Commerce (Department of Statistics) Saorstát Éireann, it would appear that the number of emigrants from Saorstát Éireann to "places out of Europe and not within the Mediterranean Sea" during the year 1926 was 30,359 and that the number of immigrants was 1983, resulting in a net migration of 28,376 persons from Saorstát Éireann in 1926. The 30,359 persons include 26,367 bound for the United States, 1,994 for British North America, 1,268 for Australia, 236 for New Zealand, 166 for British South Africa, 109 for India, and 219 for other countries.

The number of emigrants from Saorstát Éireann in 1925 was 30,302, of whom 26,546 left for the United States.

### MARRIAGES.

During the year 1926 the marriages registered in Saorstát Éireann numbered 13,570, being equivalent to a rate of 4·57 per 1,000 of the estimated population; this rate is 0·06 below that for the previous year, and 0·45 below the average for the ten years, 1916-25.

Of the 13,570 marriages, 12,600 were of Roman Catholics, as compared with 12,897 in 1925, the remaining marriages numbering 970, as against 923 in 1925. Included in the 970 marriages are 672 celebrated according to the rites and ceremonies of the Church of Ireland, as against 671 in 1925; 144 as compared with 112 in 1925, were in Presbyterian Meeting-houses; 48 as against 70 in 1925 in "Registered Buildings" belonging to various religious denominations; 87 by civil contract in the Registrars' offices, as against 54 in 1925; one was according to the usages of the Society of Friends; and 18 as compared with 14 in 1925, were according to the Jewish rites.

The rate per 1,000 of the estimated Roman Catholic population represented by the number of marriages of Roman Catholics was 4·74, or 0·39 below the corresponding average rate for the preceding ten years, and the rate for other marriages was equivalent to 3·13 per 1,000 of all persons other than Roman Catholics in the population, this rate being 0·93 below the corresponding average rate for the ten years, 1916-25.

TABLE II.—MARRIAGES registered in Saorstát Éireann area in 1926, and in each of the previous ten years, according to the MODES OF CELEBRATION; with the rate per 1,000 of the population represented thereby.

1925 ...	671	112	70	54	2	14	923	12,897	13,820	2.97	4.82	4.63
Yearly Average 1916-1925	920	176	77	109	2	11	1,295	14,023	15,318	4.06	5.13	5.02
1926 ...	672	144	48	87	1	18	970	12,600	13,570	3.13	4.74	4.57

It will be found from the figures given in the Abstract of Marriages, pages 6-7, that 91.5 per cent. of the total marriages were those of bachelors and spinsters; that 5.3 per cent. were those of widowers and spinsters; that 2.2 per cent. were marriages of bachelors and widows; and that those of widowers and widows formed 1.0 per cent. of the total marriages. Thus, of the men married 6.3 per cent. were widowers, and of the women 3.2 per cent. were widows, or in 85 instances in every 1,000 marriages, one or both of the contracting parties had been in the married state before.

A rough test of the progress of elementary education in Saorstát Éireann is afforded by the signatures of the contracting parties in the marriage registers or certificates. In the year 1926 there were 13,275 or 97.8 per cent. of the husbands, and 13,396, or 98.7 per cent. of the wives, who wrote their names, and the remainder signed by "mark."

Table XIV supplies the rates per 1,000 of the population represented by marriages in the provinces, counties and county boroughs.

### BIRTHS.

The number of births registered in Saorstát Éireann during the year 1926 was 61,176 (boys 31,382 and girls 29,794) equivalent to 20.60 per 1,000 of the estimated population, this rate being 0.22 above the average of the ten years, 1916-25.

The rate represented by the births registered in Northern Ireland was 22.5 per 1,000 of the estimated population; in England and Wales, 17.8; and in Scotland, 20.9.

For the combined county boroughs and urban districts in Saorstát Éireann, the rate per 1,000 of the population during the year 1926 was 24.2, and for all rural districts it was 19.1 (Table XV).

In 1926 the proportion of male infants born alive in Saorstát Éireann to every 1,000 females was 1,053; in 1925 it was 1,052; in 1924, 1,066; in 1923, 1,065; in 1922, 1,065; in 1921, 1,056; and in 1920 it was 1,067.

Of the 61,176 births registered during the year 59,460 or 97.2 per cent. were legitimate, and 1,716, or 2.8 per cent. were illegitimate.

For the province of Leinster illegitimacy in 1926 amounted to 3.4 per cent. of the total number of births for that province; Munster 2.9 per cent.; Connaught 1.3 per cent., and Ulster (part of) 2.8 per cent., as compared with 3.2 per cent., 2.7 per cent., 1.1 per cent., and 3.0 per cent. respectively, in 1925.

The male children born in wedlock numbered 30,533 and the female 28,927 or 1,056 of the former to every 1,000 of the latter, and of the illegitimate children 849 were males and 867 females, or 979 boys to every 1,000 girls.

It should be stated that the illegitimate birth-rate for Saorstát Éireann compares favourably with that for most other countries.

The following statement shows the total number of infants, by sexes, whose births were registered in Saorstát Éireann during each quarter of 1926 :—

—	1st Quarter.	2nd Quarter.	3rd Quarter.	4th Quarter.	Total.
Males ... ..	7,637	8,284	8,066	7,395	31,382
Females ... ..	7,187	7,944	7,534	7,129	29,794
Total ... ..	14,824	16,228	15,600	14,524	61,176

Of the total births 50·8 per cent. were registered in the first six months (181 days) and 49·2 per cent. in the second six months (184 days).

For the province of Leinster the birth-rate was 22·20 per 1,000 of the population (Census 1926); for Munster 19·89; for Connaught 19·14, and for Ulster (part of) 19·25.

#### MULTIPLE BIRTHS.

The number of twin births registered in Saorstát Éireann during the year 1926 was 762 and the number of triplet births 7. The twin births were 1·25 per cent. of the total births, 1·28 per cent. of the single births and 1·26 per cent. of the total mothers, the respective percentages in the preceding year being 1·10, 1·12, and 1·11.

The infants born in wedlock (59,460) as registered in 1926, include 745 twins, a number equivalent to 1·27 per cent. of the 58,701 married mothers, and 7 triplets, while the illegitimate infants (1,716) include 17 twins, equivalent to 1·00 per cent. of the 1,699 unmarried mothers.

Of the 1,545 infants born alive resulting from multiple births, 825 were males and 720 females.

#### DEATHS.

The deaths registered in Saorstát Éireann during the year 1926 numbered 41,740, affording a rate of 14·05 per 1,000 of the estimated population. The deaths of males amounted to 20,844, or 13·85 per 1,000 of the estimated male population, the deaths of females numbering 20,896, equivalent to 14·26 per 1,000 of the estimated female population.

The mortality from all causes in 1926 is 0·57 per 1,000 below that for 1925, and 1·58 per 1,000 below the average for the ten years 1916-25.

The death rate from all causes for Northern Ireland was 15·0 per 1,000, for England and Wales, 11·6 per 1,000 and for Scotland, 13·0 per 1,000.

Table XIV. gives the rates from all causes for Saorstát Éireann by provinces, counties and county boroughs.

From this it will be seen that the rate for the province of Leinster was 14·64 per 1,000 of the population of the province, for Munster 14·18 per 1,000, for Connaught 12·56 per 1,000 and for Ulster (part of) 14·04 per 1,000.

The rates for counties and county boroughs varied from 11·55 for Mayo county to 19·17 for Limerick county borough.

For urban areas (county boroughs and urban districts) the mortality from all causes in 1926 was 15·52 per 1,000 of the population and for the rural districts 13·44 per 1,000 (Table XV.).

The following statement shows, by sexes, the number of deaths of persons registered during each quarter of the year 1926.

—	1st Quarter.	2nd Quarter.	3rd Quarter.	4th Quarter.	Total.
Males ... ..	5,744	5,428	4,381	5,291	20,844
Females ... ..	5,804	5,470	4,365	5,257	20,896
Total ... ..	11,548	10,898	8,746	10,548	41,740

Of the total deaths 22,446, or 53·8 per cent., were recorded during the first six months and 19,294, or 46·2 per cent., in the second six months.

The annual rate per 1,000 of the population represented by deaths registered in the first quarter of the year was 15·6; in the second quarter, 14·7; in the

third, 11·8; and in the fourth, 14·2, as compared with 18·8, 16·6, 12·4, and 14·6, respectively, for the first, second, third and fourth quarters of the ten years, 1916-25.

DEATHS IN INSTITUTIONS.

The Abstract commencing on page 28 gives particulars relating to deaths by certain causes in institutions in Saorstát Éireann and for each county and county borough. Of the 41,740 deaths, 3,357 took place in general and special hospitals, 1,112 in mental hospitals, 6,089 in county homes and hospitals or in workhouse hospitals, county infirmaries and district hospitals, and 31,182 occurred elsewhere. Of the total deaths, 25·3 per cent. occurred in the above-named institutions (8·0 per cent. in general and special hospitals, 2·7 per cent. in mental hospitals and 14·6 per cent. in county homes and hospitals, infirmaries and district hospitals), and 74·7 per cent. occurred elsewhere.

CAUSES OF DEATH.

In the table which follows, the numbers of deaths from some of the principal diseases are shown for the years 1925 and 1926, also the averages for the ten years, 1916-1925.

CAUSES.	Number of Deaths registered			CAUSES.	Number of Deaths registered		
	Years.		Average 10 years 1916-25		Years.		Average 10 years 1916-25
	1926.	1925.			1926.	1925.	
Enteric Fever ...	126	105	151	Tuberculous Disease ...	4,362	4,673	5,375
Typhus ...	8	9	22	Cancer ...	3,021	2,801	2,676
Measles ...	519	198	252	Heart Disease ...	4,656	4,965	4,828
Scarlet Fever ...	134	70	87	Bronchitis ...	2,433	2,654	3,514
Whooping-cough	258	429	440	Pneumonia ...	2,314	2,338	2,760
Diphtheria ...	197	158	259	Diarrhœa and Enteritis under two years of age ...	815	640	627
Dysentery ...	6	13	16	Puerperal Septic Diseases ...	115	105	110
Influenza ...	654	1,171	2,299	Other Accidents and Diseases of Pregnancy and Childbirth ...	184	186	201
Encephalitis Lethargica ...	43	51	19				
Meningococcal Meningitis ...	17	12	27				

The number of deaths from all causes in 1926 shows a decrease of 1,910 as compared with 1925. Deaths from influenza decreased by 517, tuberculosis by 311, heart disease by 309, bronchitis by 221, whooping-cough by 171, pneumonia by 24, encephalitis lethargica by 8, dysentery by 7, other accidents of pregnancy and childbirth by 2, and typhus by one.

On the other hand, deaths from measles in 1926 show an increase of 321, deaths from cancer an increase of 220, deaths from diarrhœa and enteritis of children under 2 years an increase of 175, deaths from scarlet fever an increase of 64, deaths from diphtheria an increase of 39, deaths from enteric fever an increase of 21, deaths from puerperal septic diseases an increase of 10, and deaths from meningococcal meningitis an increase of 5.

According to Table XIV., which gives the information by provinces, counties and county boroughs, deaths from the principal epidemic diseases\* in Saorstát Éireann in 1926 are represented by a rate of 0·69 per 1,000 of the population, the rates varying from 0·16 per 1,000 for Kildare county; 0·21 per 1,000 for Mayo county, 0·23 per 1,000 for Leix county, 0·23 per 1,000 for Clare county and 0·23 per 1,000 for Leitrim county to 2·45 per 1,000 for Cork county borough, 2·29 per 1,000 for Waterford county borough, 2·17 per 1,000 for Limerick county borough, 1·53 per 1,000 for Dublin county borough, and 1·05 for Kerry county.

Table XV. shows that the mortality rate from this group of causes for all urban areas (county boroughs and urban districts) was 1·35 per 1,000 of the population, being more than 3 times the rate for rural districts—0·43 per 1,000.

\* See note (\*) on p. xxxii.

TABLE III.—Showing the number of Deaths from all Causes, from some of the EIREANN during each of the eleven years, 1916-1926, with the average of the estimated Population represented by the number of Deaths from also particulars relating to Northern Ireland for the year 1926.

NOTE.—The Classification of Causes of Death adopted for 1921-6 is in accordance with the International as far as possible, in order to afford comparison with those for 1921-6. The numbers in brackets

YEAR.	Total Number of Deaths.	Enteric Fever (1)	Typhus (2)	Small-pox (6)	Measles (7)	Scarlet Fever (8)	Whooping-cough (9)	Diphtheria (10)	Dysentery (10)	Influenza (11)	Encephalitis Lethargica (23)	Meningococcal Meningitis (including Cerebro-spinal Fever), (24)	Tuberculosis of the Respiratory System (31)	Other Tuberculosis (32-7)	Cancer, Malignant Disease (43-9)	Diabetes (57)	Cerebral Haemorrhage (74)

\* Deaths from Phlegmasia Alba Dolens and Puerperal Embolism were formerly included with deaths from Puerperal Sepsis, i.e., in the Annual Reports for the years 1916-1925. They are in the above table included with deaths from other diseases of Parturition.

† Per cent. of total deaths.

**ENTERIC FEVER.**—There were 126 deaths (of males 76 and of females 50), including 2 from paratyphoid fever, recorded during the year 1926. The 126 deaths are 21 above the number (105) recorded in 1925, and 25 below the average (151) for the ten years 1916-25. Twenty-four appertained to urban areas and 102 to rural (see abstract commencing on page 60).

**TYPHUS.**—Eight deaths from typhus were registered, as against 9 in 1925 and an average of 22. Of the 8 deaths in 1926, 6 were those of males and 2 of females.

**SMALL-POX.**—No case of this disease was reported during the year, nor during any of the preceding ten years.

**MEASLES.**—The fatal cases of this disease numbered 519 (of males 263 and of females, 256). This number, which is 321 above the number recorded during the preceding year, is 267 above the average for the ten years, 1916-25, viz., 252. Of the 519 deaths, 409 were those of children under 5 years of age, including 274 under 2 years.

**SCARLET FEVER.**—Deaths from this disease amounted to 134 during the year 1926, as compared with 70 in 1925, and an average of 87 for the ten years ending with the latter year. Of the 134 deaths, 60 were those of males and 74 of females.

**WHOOPING-COUGH.**—Deaths from whooping-cough, which declined from 795 in 1920 to 216 in 1921 and 201 in 1922, and rose to 454 in 1923, and still further to 621 in 1924, fell in 1925 to 429, and in the year 1926 to 258, or 182 under the average (440) for the ten years, 1916-1925.

Of the 258 deaths (of males 122 and of females 136) 237 were those of children under 5 years of age, 111 of the latter being deaths of infants under one year of age.

The deaths recorded for urban areas numbered 117 and for rural areas 141, as compared with 164 and 265 respectively, in 1925.

**DIPHTHERIA.**—The number of deaths from this disease (197), which is 39 above the number (158) registered during 1925, is 62 below the average (259) for the ten years 1916-25. The deaths in 1926 comprise 88 of males and 109 of females; of the total number, 98 deaths were those of children under 5 years of age and 53 were between 5 and 10 years, so that 151 or 77 per cent. of all the deaths from diphtheria were those of children under ten years of age.

**DYSENTERY.**—To this cause 6 deaths were attributed, as compared with an average of 16 for the preceding ten years.

**DIARRHŒA AND ENTERITIS (Children under 2 years).**—The number of deaths of children attributed to this cause during the year 1926 was 815, which number is 175 above that recorded in 1925, and 188 above the average (627) for the decennium, 1916-25.

Of the 815 deaths (462 of males and 353 of females) 308, or 39 per cent. appertained to Dublin county borough.

The mortality among children in 1926 from diarrhœa and enteritis for urban areas based on the births recorded therefor was 26·6 per 1,000 and for rural areas the corresponding rate was 6·4 per 1,000, the respective rates for the preceding year being 22·8 and 3·8. (See Abstract on page 60).

**INFLUENZA.**—The number of deaths from influenza registered during the year 1926 was 654—deaths of males, 286, and of females, 368—the rate per 1,000 of the population represented by these figures being 0·22, 0·19 and 0·25, respectively. In 1920 the number of deaths from this cause was 696, in 1921 it was 648, in 1922 it rose to 1,812, falling in 1923 to 621, followed by a rise to 2,073 in 1924, and again falling in 1925 to 1,171. The number (654) in 1926, in 1,645 under the average (2,299) for the ten years, 1916-25.

It should be noted, however, that the highest annual mortalities from influenza ever recorded in the Saorstát Éireann area, viz., those for the years 1918 and 1919, during which 6,788 and 7,468 deaths, respectively, occurred, are included in this average, and if the average be taken for the deaths in 1916-25 exclusive of those for the two years referred to it will be found that the annual average for the 8 years is 1,092, which is 438 above the number recorded for the year 1926.

Of the deaths from influenza in 1926, 29 per cent. were registered during the first quarter of the year, 41 in the second, 11 in the third and 19 in the fourth quarter.

Of the 654 deaths from influenza, 163 related to urban and 491 to rural areas.

Among the 654 deaths from influenza in the entire area, 184 were associated with pulmonary complications, and 470 were returned as from influenza without qualification or were from that disease complicated with maladies other than pulmonary.

**ERYSIPELAS.**—There were 42 deaths (19 of males and 23 of females) from this cause, as compared with 39 in 1925.

**ACUTE POLIOMYELITIS.**—Eleven deaths were ascribed to this disease, being one under the number recorded in the preceding year.

**ENCEPHALITIS LETHARGICA.**—The fatal cases of this disease, which numbered 4 in 1919, 17 in 1920, 31 in 1921, 19 in 1922, 16 in 1923, 55 in 1924, and 51 in 1925, fell to 43 in 1926. Twenty-one of the latter were those of males and 22 of females.

**MENINGOCOCCAL MENINGITIS.**—This disease caused 17 deaths (11 of males and 6 of females) or 5 above the number for 1925, and 10 under the average for the 10 years 1916-25.

**OTHER EPIDEMIC DISEASES.**—There were 2 deaths (both of males) from malaria, one death (a female) from mumps, one death (a male) from cholera nostras, 7 deaths (3 males and 4 females) from epidemic rose rash, 3 deaths (2 males and one female) from varicella, one death (a female) from rubella, and one death (a male) from Malta fever.

**TETANUS.**—The number of deaths from this disease was 24, those of males being 18 and of females 6, as against a total of 17 (16 of males and one of a female) in 1925.

## TUBERCULOSIS.

Deaths from all forms of tuberculous disease registered in Saorstát Éireann during the year 1926 numbered 4,362, and of these 2,167 were deaths of males and 2,195 of females. The total number is equivalent to a rate of 1.47 per 1,000 of the total population, the number of deaths of males affording a rate of 1.44 per 1,000 of the estimated number of males, and the deaths of females 1.50 per 1,000 of the estimated number of females in the population, as will be seen from the following Table.

The corresponding rates for all deaths from tuberculosis were, in Northern Ireland 1·47 per 1,000 of the estimated population, in England and Wales 0·96 per 1,000 and in Scotland 0·99 per 1,000.

TABLE IV.—Showing by sexes the mortality from tuberculosis during each of the years 1916-26.

\* Decrease in 1925 as compared with 1916.

It will be observed from this table that a continuous reduction in the mortality from tuberculosis took place in the Saorstát Éireann area each year from 1918 to 1923, the rate for the latter year being 1·48 per 1,000. This mortality was followed by an increase in 1924, amounting to 114 deaths (42 of males and 72 of females) and by a further increase of 91 (43 males and 48 females) in 1925; but in 1926 deaths from tuberculosis again show a decrease, amounting to 311, so that the deaths for 1926 are the fewest ever recorded for the Saorstát Éireann area.

Of the 4,362 deaths, 3,369 (of males 1,667, and of females 1,702) were caused by tuberculosis of the respiratory system, 227 (of males 111 and of females 116) by tuberculosis of the meninges, 260 (of males 103 and of females 157) by tuberculosis of the intestines and peritoneum, 76 (of males 44, and of females 32) by tuberculosis of the vertebral column, 39 (of males 22 and of females 17) by tuberculosis of the joints, 96 (of males 52 and of females 44) by tuberculosis of other organs, and 295 (of males 168 and of females 127) were caused by disseminated tuberculosis.

The deaths from tuberculosis of the respiratory system in 1926 show a decrease of 298 (120 males and 178 females) as compared with 1925, and those from other forms of tuberculous disease, numbering 993 (500 deaths of males and 493 of females) a decrease of 13, consisting of a decrease of 20 deaths of males and an increase of 7 in the deaths of females.

Included in the 4,362 deaths from tuberculous diseases are 1,610 deaths of persons belonging to urban areas and 2,752 to rural, as compared with 1,760 urban and 2,913 rural deaths in 1925, showing a decrease of 150 in the urban deaths in 1926, and a decrease of 161 in the deaths appertaining to rural areas.

The abstracts commencing on page 28 give the details regarding deaths from tuberculosis, by provinces, counties, county boroughs, and urban and rural districts, while Tables XIV. and XV. supply the rates per 1,000 of the population for these areas.

It will be seen from Table XIV. that the highest tuberculosis mortality for county or county borough areas related to the following:—Cork county borough (2·24 per 1,000), Waterford county borough (2·10 per 1,000), Dublin county borough (2·01 per 1,000), and Westmeath county (1·81 per 1,000) the counties having the lowest rates in 1926 being Roscommon (0·75), Longford (0·80), Cavan (1·03) and Sligo (1·08).

SYPHILIS, &c.—Thirty-one deaths (17 of males and 14 of females) were ascribed to syphilis as compared with 25 in 1925. Of the 31 deaths, 17 (8 of males and 9 of females) were those of infants under one year of age.

Four deaths (all males) were ascribed to other venereal affections.

There were 36 deaths (34 of males and 2 of females) from general paralysis of the insane; 6 deaths (of males 5 and of females one) from locomotor ataxy, and 26 deaths (of males 18, and of females 8) from aneurysm.

PURULENT INFECTION, SEPTICÆMIA.—Under this heading 111 deaths were returned, (68 being those of males, and 43 of females), as against 88 in the preceding year.

OTHER INFECTIOUS DISEASES.—One death (that of a male) from anthrax occurred, and 3 deaths (1 male and 2 females) from mycoses were also registered.

CANCER.—A distinctly upward tendency in the mortality from cancer was one of the notable features of the death statistics of the years 1923 and 1924, as will be seen from Table III., which shows that while the mortality for the years 1916-22 fluctuated but slightly, that for the year 1923 gave an increase of 8 per cent. as compared with 1922, and that for 1924 an increase of 6 per cent. as compared with 1923; but in the year 1925 a decrease, amounting to 102 deaths (3·5 per cent.), as compared with the preceding year, occurred.

In 1926, however, the increase in deaths from cancer again continued, the deaths recorded numbering 3,021, showing an increase of 220, or 8 per cent., as compared with 1925.

During the years 1882 to 1890, the average annual rate per 1,000 of the mean population of those years, represented by the number of deaths from cancer registered in the Saorstát Éireann area was 0·37, followed by a rate of 0·48 per 1,000 for the ten years, 1891-1900, by 0·68 per 1,000 for the decennium, 1901-10, by 0·84 per 1,000 for the decennium, 1911-1920, and by 0·92 per 1,000 for the six years, 1921-26.

It is not possible to say to what extent the increase shown in the mortality from this cause results from faulty description of the cause of death in the records of the earlier years. It is improbable, however, that any appreciable proportion of the increase shown in the average annual mortality from cancer for the six years 1921-6, as compared with that for the decennium 1901-10, can be ascribed in this way to improved diagnosis.

Consequently, the mortality from cancer in the Saorstát Éireann area during the six years, 1921-26, viz., 0·92 per 1,000, shows a real increase of 35 per cent. as compared with the average annual rate (0·68 per 1,000) for the ten years, 1901-10.

Of the 3,021 deaths in 1926, those of males numbered 1,558, and of females 1,463. These figures are represented by rates of 1·02 per 1,000, 1·04 per 1,000, and 1·00 per 1,000, respectively.

As compared with 1925 (0·99 per 1,000) the mortality among males in 1926 shows an increase of 5 per cent., the increase among females being 14 per cent. on the rate (0·88 per 1,000) in 1925.

Deaths from cancer in urban areas numbered 995 or 1·15 per 1,000 of the population, and in rural areas, 2,026, equivalent to 0·96 per 1,000, as compared with 963 urban deaths (rate 1·12 per 1,000) and 1,838 rural (rate 0·87 per 1,000) in 1925.

Of the 3,021 deaths from cancer, 1,488 were returned as from carcinoma, 134 as from sarcoma, and 1,399 as from cancer, malignant disease.

In Northern Ireland the rate for both sexes was 1·12 per 1,000, for males 1·02, and for females 1·22.

For England and Wales the mortality from cancer in 1926 was 1·36 per 1,000 of the population and for Scotland 1·36 per 1,000.

Table V. shows the number of deaths from cancer, by sexes, ages, and parts affected.

\* Including Carcinoma, Sarcoma, and Cancer, Malignant Disease.

**TUMOURS.**—Only tumours either definitely stated to have been non-malignant, or as to which, as the result of special enquiries regarding their nature, further information was not obtainable, are included under this heading.

There were 28 deaths from cerebral tumour (of males 11 and of females 17); 15 from tumours of the ovary; 23 from tumours of the uterus; and 59 from tumours of other or unstated sites (27 of males and 32 of females).

The latter included 17 returned as from tumour of the abdomen, 5 of bladder, 6 of intestine, 3 of neck, 3 of side, 3 of spine, 2 of lung, 2 of mediastinum, 2 of spleen, 2 of throat, one of each of the following:—breast, ilium, kidney, larynx, liver, pancreas, pylorus, thyroid, and urethra, and 5 were tumours of which the site was unstated.

**RHEUMATISM.**—There were 109 deaths (61 of males and 48 of females) from rheumatic fever and 277 deaths (111 of males and 166 of females) from chronic rheumatism, osteo-arthritis and gout.

**DIABETES.**—To this cause 226 deaths were attributed, 111 being deaths of males and 115 of females. The total deaths are 4 above the number (222) for the year 1925, and the same as the average for the 10 years 1916-25.

**ALCOHOLISM.**—Nine deaths were ascribed to alcoholism, and of these 8 were those of males. Cirrhosis of the liver caused 113 deaths, 72 being those of males and 41 of females. All except 3 males and one female were aged 30 years and upwards.

**OTHER GENERAL DISEASES.**—Among these were 2 deaths (of males) from scurvy, 32 deaths from rickets, 212 from pernicious anæmia (98 of males and 114 of females), 83 from other anæmias and chlorosis (26 of males and 57 of females), 36 (one male and 35 females) from exophthalmic goitre, 24 from other diseases of the thyroid gland (6 deaths of males and 18 deaths of females), 8 from tetany (3 of males and 5 of females), 2 from diseases of thymus (one male and one female), 11 (6 of males and 5 of females) from diseases of the adrenals, 3 from disease of the spleen, 27 from leukæmia, 22 from lymphadenoma (Hodgkins' disease) and one from chronic poisoning by mineral substances. Among 43 other deaths under this heading 29 (15 males and 14 females) were returned as occurring from purpura; 4 (3 males and one female) from hæmophilia; one (a female) from amyloid disease, one (a male) from diabetes insipidus, and one (a female) from pellagra.

**MENINGITIS AND ENCEPHALITIS.**—Deaths from meningitis (not returned as cerebro-spinal or tuberculous) amounted to 351 (deaths of males numbering 182, and of females, 169) as compared with 307, 167, and 140 respectively, in 1925.

The number of deaths from encephalitis (not returned as encephalitis lethargica), was 42 as against 59 in 1925.

**CEREBRAL HÆMORRHAGE.**—The number of deaths returned under this heading was 1,339, comprising 576 deaths of males and 763 of females. These figures include the deaths of 41 males and 62 females from cerebral thrombosis and embolism.

The 1,339 deaths are 27 above the number recorded in 1925, and 22 under the average for the 10 years, 1916-25.

**EPILEPSY.**—There were 149 deaths (of males 97, and of females 52) from epilepsy, as compared with 155 in the preceding year.

**CONVULSIONS.**—The number of deaths ascribed to convulsions was 645 (of males 361, and of females 284) and of the 645 deaths, 513, or 79·5 per cent. were those of infants under one year of age, constituting 11·3 per cent. of the deaths from all causes of infants under one year of age registered in Saorstát Éireann during the year 1926.

**HEART DISEASE.**—To this group, 4,656 deaths (of males 2,248, and of females 2,408) were assigned, equivalent to a rate of 1·57 per 1,000 of the estimated population, and contributing 11·2 per cent. to the mortality from all causes. The number of deaths from heart disease during the year under review is 309 below that for 1925, and 172 below the average (4,828) for the ten years 1916-25.

Of the 4,656 deaths, 26 were ascribed to pericarditis, 117 to acute endocarditis and myocarditis, 73 to angina pectoris, and 4,440 to other diseases of the heart.

**ARTERIO-SCLEROSIS.**—Deaths from arterio-sclerosis, of which 145 were those of males, and 76 of females, numbered 221, the number recorded for 1925, being, 197.

**BRONCHITIS.**—The deaths from this cause numbered 2,433 (of males, 1,178, and of females, 1,255), being equivalent to a rate of 0·82 per 1,000 of the population, or 5·8 per cent. of the total number of deaths from all causes. The number of deaths (2,433) is 221 below the number for 1925, and 1,081 under the average for the ten years, 1916-25, and is the lowest mortality from bronchitis recorded for the Saorstát Éireann area.

**PNEUMONIA.**—Of 2,314 deaths from pneumonia (all forms), affording a rate of 0·78 per 1,000 of the population, 945 were from broncho-pneumonia, 271 from lobar pneumonia, and 1,098 from pneumonia (not otherwise defined).

The 2,314 deaths include 1,281 deaths of males and 1,033 of females, and are 446 under the average for the ten years, 1916-25.

**PLEURISY ; EMPYEMA.**—The number of deaths classed to pleurisy, including deaths from empyema regarding which the originating cause other than pleurisy could not be ascertained, was 104, the males numbering 57, and the females 47.

As the result of inquiries into the causes of 12 deaths returned as having been caused by empyema, sufficient information was obtained to enable 8 of these to be classified to other causes, viz., 5 to tuberculosis, one to heart disease, one to lobar pneumonia, and one to pneumonia (not otherwise defined).

**ULCERS OF THE STOMACH AND DUODENUM.**—To this cause 264 deaths were attributed, 171 being those of males and 93 of females. The total number is 25 above the average (239) for the ten years, 1916-25.

**APPENDICITIS.**—The deaths so classified numbered 189 (of males 101, and of females 88) being 45 above the average (144) for the ten years preceding.

**CIRRHOSIS OF THE LIVER.**—Deaths from this cause, viz., 113 (of males 72, and of females 41) are 5 under the average for the ten years 1916-25.

**ACUTE AND CHRONIC NEPHRITIS.**—The number of deaths from acute nephritis was 155 (86 of males and 69 of females) and from chronic nephritis 990 (514 of males and 476 of females). The total number of deaths from the acute and chronic disease was 1,145, which number is 17 above that for 1925, and 48 above the average for the ten years 1916-25.

## PREGNANCY AND CHILDBIRTH.

The mortality of women during pregnancy and childbirth is classified under three headings, namely (1) septic conditions (2) intrinsic accidents and diseases of pregnancy and childbirth, and (3) diseases or causes associated with pregnancy and childbirth. To the first group 115 deaths were attributed in the year 1926, to the second, 184, and to the third 30; altogether the deaths in Saorstát Éireann of childbearing women numbered 329. This number, which is 17 above that for the year 1925, represents a rate of 5·38 per 1,000 of the total births registered, as compared with 5·03 in the year 1925, and with 5·59 per 1,000, the average rate for the decade, 1916-25.

Table VII. shows that in the mortality from puerperal septic diseases there was an increase, viz., from 105 in the year 1925 to 115 in 1926, but a slight decrease in the mortality from accidents of pregnancy and childbirth, which fell from 186 in 1925 to 184 in 1926. The deaths of women from causes associated with pregnancy and childbirth, which were 21 in the year 1925, rose to 30 in the year under review.

[TABLE

Tables XIV. and XV. give the rates per 1,000 births for (1) and (2) by provinces, counties and county boroughs and groups of urban and rural areas.

TABLE VI.—Showing the number of deaths of women in 1926 definitely returned as either caused by or associated with PREGNANCY or CHILDBEARING.\*

## VIOLENCE.

Deaths caused by violence, as registered in Saorstát Éireann during the year 1926, amounted to 889, a number equivalent to 0·30 per 1,000 of the estimated population, and 73 more than that recorded for 1925, and 388 below the average (1,277) for the ten years 1916-25.

Of the 889 deaths, 97 were classed to suicide, 44 to homicide, and one to execution, leaving 747 to other deaths by violence, the majority of which were definitely stated to have been accidental.

The suicidal cases comprise the deaths of 78 males and 19 females.

Of the 44 homicidal cases, 27 were deaths of males (including 11 infants under one year old) and 17 of females (including 9 infants one year old).

The deaths other than those classed to homicide, suicide or execution, include 12 (6 of males and 6 of females) caused by poisons or poisonous gases, and 185 (67 of males and 118 of females) by burns or scalds. Of the 185 deaths caused by burns or scalds, 72 were those of children under 5 years of age. The number also includes 46 deaths which resulted from a conflagration.

There were 131 deaths (of males 112, and of females 19) from accidental drowning, 12 deaths caused by injuries due to firearms, of which 11 were those of males and one of a female, and there were 131 deaths caused by crushing and other injuries by vehicles, etc., (105 of males and 26 of females), including 70 (males 52, and females 18), as compared with 53 in 1925, by motor driven vehicles, and 15 by railway trains.

Of the 12 accidental deaths attributed to poisons or poisonous gases, 3 were caused by carbon-monoxide; one by strychnine; one by copper sulphate; one by carbolic acid; one by prussic acid; one by potassium chloride; one by sea grass; one by sheep dip; one by coal gas; and one by a gas of which the name was not stated.

The suicidal deaths include 12 by poisoning; 3 were stated to have been caused by phosphorus (rat poison), 2 by strychnine, 2 by carbolic acid, one by lysol, one by paraldehyde and carbolic acid; one by morphia; one by corrosive poison; and one by "poisonous gas."

## UNCERTIFIED CAUSES.

Among the 41,740 deaths registered, 10,577 were not certified by medical practitioners, nor were inquests into their causes held. They constitute 25·3 per cent. of the total mortality in 1926, as against an average of 26·5 for the ten years, 1916-25. The number of uncertified deaths in urban areas in 1926 was 4·5 per cent. of the total number of deaths registered therein, the corresponding percentage for rural areas being 35·2.

## INQUESTS.

According to returns furnished by the registrars the number of inquests during the year 1926 was 755, or one inquest for every 55 deaths registered.

## AGES AT DEATH.

Of the 41,740 deaths at all ages, 6,781 or 16·2 per cent. were deaths of children under 5 years of age, including 3,676 deaths of males, or 17·6 per cent. of the male mortality at all ages, and 3,105 deaths of females, or 14·9 per cent. of the total number of deaths of females.

The deaths of 18,051 persons aged 65 years or upwards were registered during the year 1926, constituting 43·2 per cent. of the total number of deaths at all ages, and include 8,803 of males, or 42·2 per cent. of the total deaths of males, and 9,248 of females, or 44·3 per cent. of the deaths of females at all ages.

Among the deaths of persons at these ages 14,543, or 34·8 per cent. of the total deaths, were 70 years of age or over.

Deaths of persons aged 95 years or upwards numbered 287 (of males 125, and of females 162) and they include 49 (males 20 and females 29) whose ages at death were returned as 100 years or upwards.

The ages in detail of the persons whose deaths were registered in the year 1926 are given in the Abstracts commencing with page 8.

### INFANT MORTALITY.

The number of deaths of infants under one year of age registered in Saorstát Éireann during the year 1926 was 4,552, equivalent to a rate of 74 per 1,000 births, as compared with 68 per 1,000 in 1925 and an average of 76 for the ten years 1916-25.

The deaths of male infants numbered 2,538, being equal to 81 per 1,000 births of males, and the deaths of female infants, 2,014, or 68 per 1,000 births of females, the corresponding rates for 1925 being 75 and 61 respectively.

For Northern Ireland the infant mortality in 1926 was 85 per 1,000 births; for England and Wales, the rate was 70; and for Scotland 83 per 1,000 births.

From Table IX., which gives the infant mortality rates for Saorstát Éireann, by sexes, ages and causes, it will be seen that atrophy, debility, marasmus (19·35 per 1,000), diarrhoea and enteritis (11·97), convulsions (8·39), premature birth (8·04), pneumonia (6·11), and bronchitis (4·22) in the aggregate, are equivalent to 58·08 per 1,000 births, or 78 per cent. of the total infant mortality.

Of the deaths of infants, 35·9 per cent. were under one month old, 11·2 per cent. between one and two months; 8·8 per cent. between 2 and 3 months; 19·5 per cent. were aged 3 and under 6 months, and 24·6 in every 100 were 6 and under 12 months old.

#### *Urban and Rural Mortality.*

There were 2,306 deaths of infants recorded for urban areas, equivalent to 110 per 1,000 births, and the number of such deaths in rural areas was 2,246, or 56 per 1,000 births.

A reference to Table X. shows that, although the mortality in rural districts is low, the rate for urban areas of 10,000 inhabitants and upwards is high, viz., 120 per 1,000 births. The urban areas which contribute to this result are:—Limerick county borough, with a rate of 146, Kilkenny (128), Dublin Registration Area (including Dublin county borough, 127) (122), Cork county borough (122), Waterford county borough (114), Tralee (109), Galway (102), Wexford (92), Drogheda (86), Sligo (74), and Dundalk (64).

Deaths of infants in 1926, in urban districts of less than 10,000 inhabitants were equivalent to a rate of 77 per 1,000 births.

The following statement gives the infant mortality for each sex for urban and rural areas:—

Statement showing the INFANT MORTALITY per 1,000 Births, by sexes, and at different periods of life in 1926, in relation to urban and rural areas.

AGES.	SAORSTÁT ÉIREANN

3-6 „ ...	26·29	28·06	24·43	16·44	16·39	16·50	24·17	25·59	22·69	9·48	10·19	8·74
6-12 „ ...	31·66	30·67	32·70	18·44	17·71	19·17	28·81	27·93	29·73	12·84	13·61	12·01
Under one year	119·56	128·64	110·00	76·87	78·83	74·00	110·37	118·10	102·30	55·76	61·70	49·47

The rate for deaths of infants under one year old for Belfast in 1926 was 112 per 1,000 births; for Londonderry, 118; for London, 64; for Liverpool, 103; for Edinburgh, 80; and for Glasgow, 104.

In connection with the ages at death, as disclosed by Table XI., the marked difference in the mortality in urban and in rural areas at each age period, and especially at one month old and upwards, is shown.

#### DEATHS OF ILLEGITIMATE INFANTS.

The number of deaths of illegitimate infants under one year of age registered in Saorstát Éireann during the year 1926, was 553, consisting of 292 deaths of males and 261 of females. Based on the number of illegitimate births registered, the resulting mortality rate is 322 per 1,000 births for both sexes, 344 per 1,000 for males and 301 per 1,000 births for females, as compared with 287, 289, and 284, respectively, in 1925.

It may be stated that the illegitimate infant mortality, as derived from the records for 1926, is nearly 5 times the mortality among legitimate infants, which was 67 per 1,000 births for both sexes, 74 per 1,000 for males, and 61 per 1,000 births for females.

In other words, ten out of every 31 illegitimate infants born alive in 1926, died before the completion of their first year of life.

In Northern Ireland in 1926, the illegitimate infant death-rate was 238 per 1,000 births; and in England and Wales, the illegitimate infant death-rate was 130 per 1,000 births, or about one death to every 8 illegitimate infants born alive. This rate is about twice that for legitimate infants.

Table XII. shows for the whole of Saorstát Éireann the number of deaths by causes and at different periods of life under one year of age. On account of the smallness of the numbers it was not considered desirable to calculate rates for each age by causes. Rates are, however, given for all causes at each age period. It would appear from this table that at every period of life, the mortality among illegitimate infants is much in excess of that for all infants, as shown in Table IX.

It will be seen from Table XIII. that 231, or nearly 42 per cent. of the total number of deaths of illegitimate infants occurred in Dublin county and city. Of the 107 deaths in the county, 88 took place in institutions, and 19 elsewhere, and of the 124 city deaths, the corresponding numbers were 100 and 24. Thus, 43 of the 231 deaths in Dublin county and city did not occur in institutions. Of the latter, 11 were described in the registers of deaths as "nurse children," 6 of these occurring in the city, and 5 in the county.

"The striking features of the weather in the year 1926, month by month, were as follows:—January, for the fourth year in succession, was an open month of S.W. winds, and of low and unsteady atmospheric pressure—the mean was 29·695 inches, or 0·187 inch below the average. February was characterised by clouded skies, dampness, and a mean temperature of 3·8 degrees above average. 'March many weathers' might aptly and briefly describe the March of 1926. April opened with a spell of beautiful weather, but after the 7th resembled a typical April of showers by day, clear skies and low temperatures by night. May was cold, and a showery rather than a wet month. June for the greater part was changeable and cold, although isolated warm and fine days gave a promise of summer.

"July was a month of varying weather moods—warm, and for the most part dry at the beginning and close, with a broken spell in between, from the 18th to the 25th, but not so settled as June. August, in fitting character with the August of 1925, was favourable and warm though showery. September may be described as a favourable month, a fitting sequel to a generally fine summer. October, as in 1925, presented two absolutely different types of weather—the earlier period was fine, very warm, quiet. The latter half was characterised by a spell of very wintry weather, with almost nightly ground frost after the 15th. These conditions persisted during the first days of November, which was a cheerless, cold and unsettled month—a remarkably low atmospheric pressure being an outstanding feature in its meteorology. The leading features of the weather in December were a remarkably persistent and steady high atmospheric pressure, culminating on the morning of Christmas Day in the unusual reading of 30·898 inches (1046·3 millibars), a very small rainfall on only ten rain-days, clouded skies, infrequent frosts of very short duration, and, so far as Dublin is concerned, an absence of snow.

"The rainfall was 26·701 inches, or 0·669 inch below the average annual measurement of the thirty-five years 1881-1915 inclusive, viz., 27·370 inches.

"In 1926 there were 215 'rain-days,' or days upon which not less than ·005 inch of rain (five thousandths of an inch) was measured. This was 17 days more than the average number of rain-days in the thirty-five years, 1881-1915, inclusive (198). In 1868 and 1887—the warm, dry years of recent times—the rain-days were only 160, and in 1870 they were only 145. A millimetre of rain—roughly, ·04 inch—fell on 132 days in 1926.

"The rainfall in the first six months of 1926 was 13·232 inches on 113 days. In the second six months it was 13·469 inches on 102 days."

Particulars, kindly furnished by the Director, Meteorological Office, London, regarding meteorological observations taken at the Ordnance Survey Office, Phoenix Park, and at Roche's Point, Co. Cork, are published in my Quarterly Returns of Marriages, Births and Deaths.

I.—PROVINCE OF LEINSTER.—MARRIAGES, BIRTHS AND DEATHS, 1926.

SUPERINTENDENT REGISTRARS' DISTRICTS, BY COUNTIES.

[Wherever the minus sign (—) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, less than the deaths to the extent stated.]

Table with columns: SUPERINTENDENT REGISTRARS' DISTRICTS., Area\* in Statute Acres (un-revised), Population, Census, 1911., Total Number of Marriages Registered., BIRTHS (INCLUDING ILLEGITIMATE). (Total Number Registered, Transferred from Area, Transferred to Area, Net Number.), ILLEGITIMATE BIRTHS. (Total Number Registered, Transferred from Area, Transferred to Area, Net Number.), DEATHS. (Total Number Registered, Transferred from Area, Transferred to Area, Net Number.), Excess of Births over Deaths.

\* See note (\*) on page 1.

TOTAL ...									3,139,688	1,589,509	1,550,179

III.—Statement showing, by sexes, the Estimated Population of Saorstát Éireann, in the middle of each of the years 1911–26.

Year.	Persons.	Males.	Females.	Year.	Persons.	Males.	Females.	Year.	Persons.	Males.	Females.
1911	3,132,000	1,586,000	1,546,000	1917	3,065,000	1,551,000	1,514,000	1923	3,014,000	1,526,000	1,488,000
1912	3,120,000	1,581,000	1,539,000	1918	3,066,000	1,553,000	1,513,000	1924	3,005,000	1,521,000	1,484,000
1913	3,103,000	1,572,000	1,531,000	1919	3,102,000	1,598,000	1,504,000	1925	2,985,000	1,512,000	1,473,000
1914	3,092,000	1,568,000	1,524,000	1920	3,103,000	1,598,000	1,505,000	1926	2,970,000	1,505,000	1,465,000
1915	3,068,000	1,546,000	1,522,000	1921	3,096,000	1,599,000	1,497,000				
1916	3,068,000	1,549,000	1,519,000	1922	3,022,000	1,529,000	1,493,000				

Note.—This Table has been constructed by adding the births registered in each year to the estimated population for the previous year, deducting the deaths and the number of emigrants, and adjusting the results so as to allow for the discrepancy for 1911 and 1926, and the population as shown by the Censuses of each of these years.
