## REPORT ON VITAL STATISTICS FOR THE YEAR 1962

THIS Report has been prepared by the Central Statistics Office for the Minister for Health in accordance with the provisions of Section 2 of the Vital Statistics and Births, Deaths and Marriages Registration Act, 1952.

The statistics relate to the area in Ireland exclusive of the Six Counties.

Births have been assigned to the district containing the normal residence of the mother and deaths to the district containing the normal residence of the deceased. The number of births for each of the years 1943 to 1962 is exclusive of late registrations, and the number of deaths for each of the years 1940 to 1962 is exclusive of non-residents.

The important statistics contained in this Report have already been published, and the Report consists mainly of a breakdown and analysis of these statistics.

### GENERAL SUMMARY

**Marriages.**—There were 15,627 marriages registered during the year 1962 compared with 15,329 in 1961. The marriage rate per 1,000 population was 5.53 compared with 5.44 in 1961.

**Births.**—The number of births registered during 1962 was 61,782 and the birth rate was 21.88 per 1,000 population, compared with 21.23 per 1,000 population in 1961. The number of illegitimate births registered in 1962 was 1,111 or 1.80 per cent of all births.

**Deaths.**—The number of deaths registered during 1962 was 33,838 and the death rate was 11.98 per 1,000 population. In 1961 deaths registered numbered 34,763 and the rate was 12.33.

Of the deaths registered in 1962, 32.37 per cent were stated to be due to heart diseases, 14.47 per cent to malignant neoplasms, 11.90 per cent to vascular lesions affecting the central nervous system and 1.26 per cent to tuberculosis (all forms).

The number of deaths in 1962 from tuberculosis of all forms was 426 and the rate was 0.15 per 1,000 population, which was the same as that for 1961.

There were 4,707 deaths from malignant neoplasms and neoplasms of lymphatic and haematopoietic tissues (excluding Hodgkin's disease and leukaemia and aleukaemia). This total is comparable with that for "cancer" in the 1949 and earlier Reports. The rate in 1962 was 1.67 per 1,000 population, compared with 1.60 in 1961.

During 1962 the deaths of 1,800 infants under one year were registered, equivalent to a rate of 29.13 per 1,000 live births. In the previous year 1,827 deaths, equivalent to a rate of 30.54 per 1,000 live births, were registered.

The total number of deaths from accidents and other external causes in 1962 was 986, of which road vehicle accidents accounted for 310.

Marriage, birth and death rates per 1,000 population for the years 1940 to 1962 are illustrated in Diagram I.

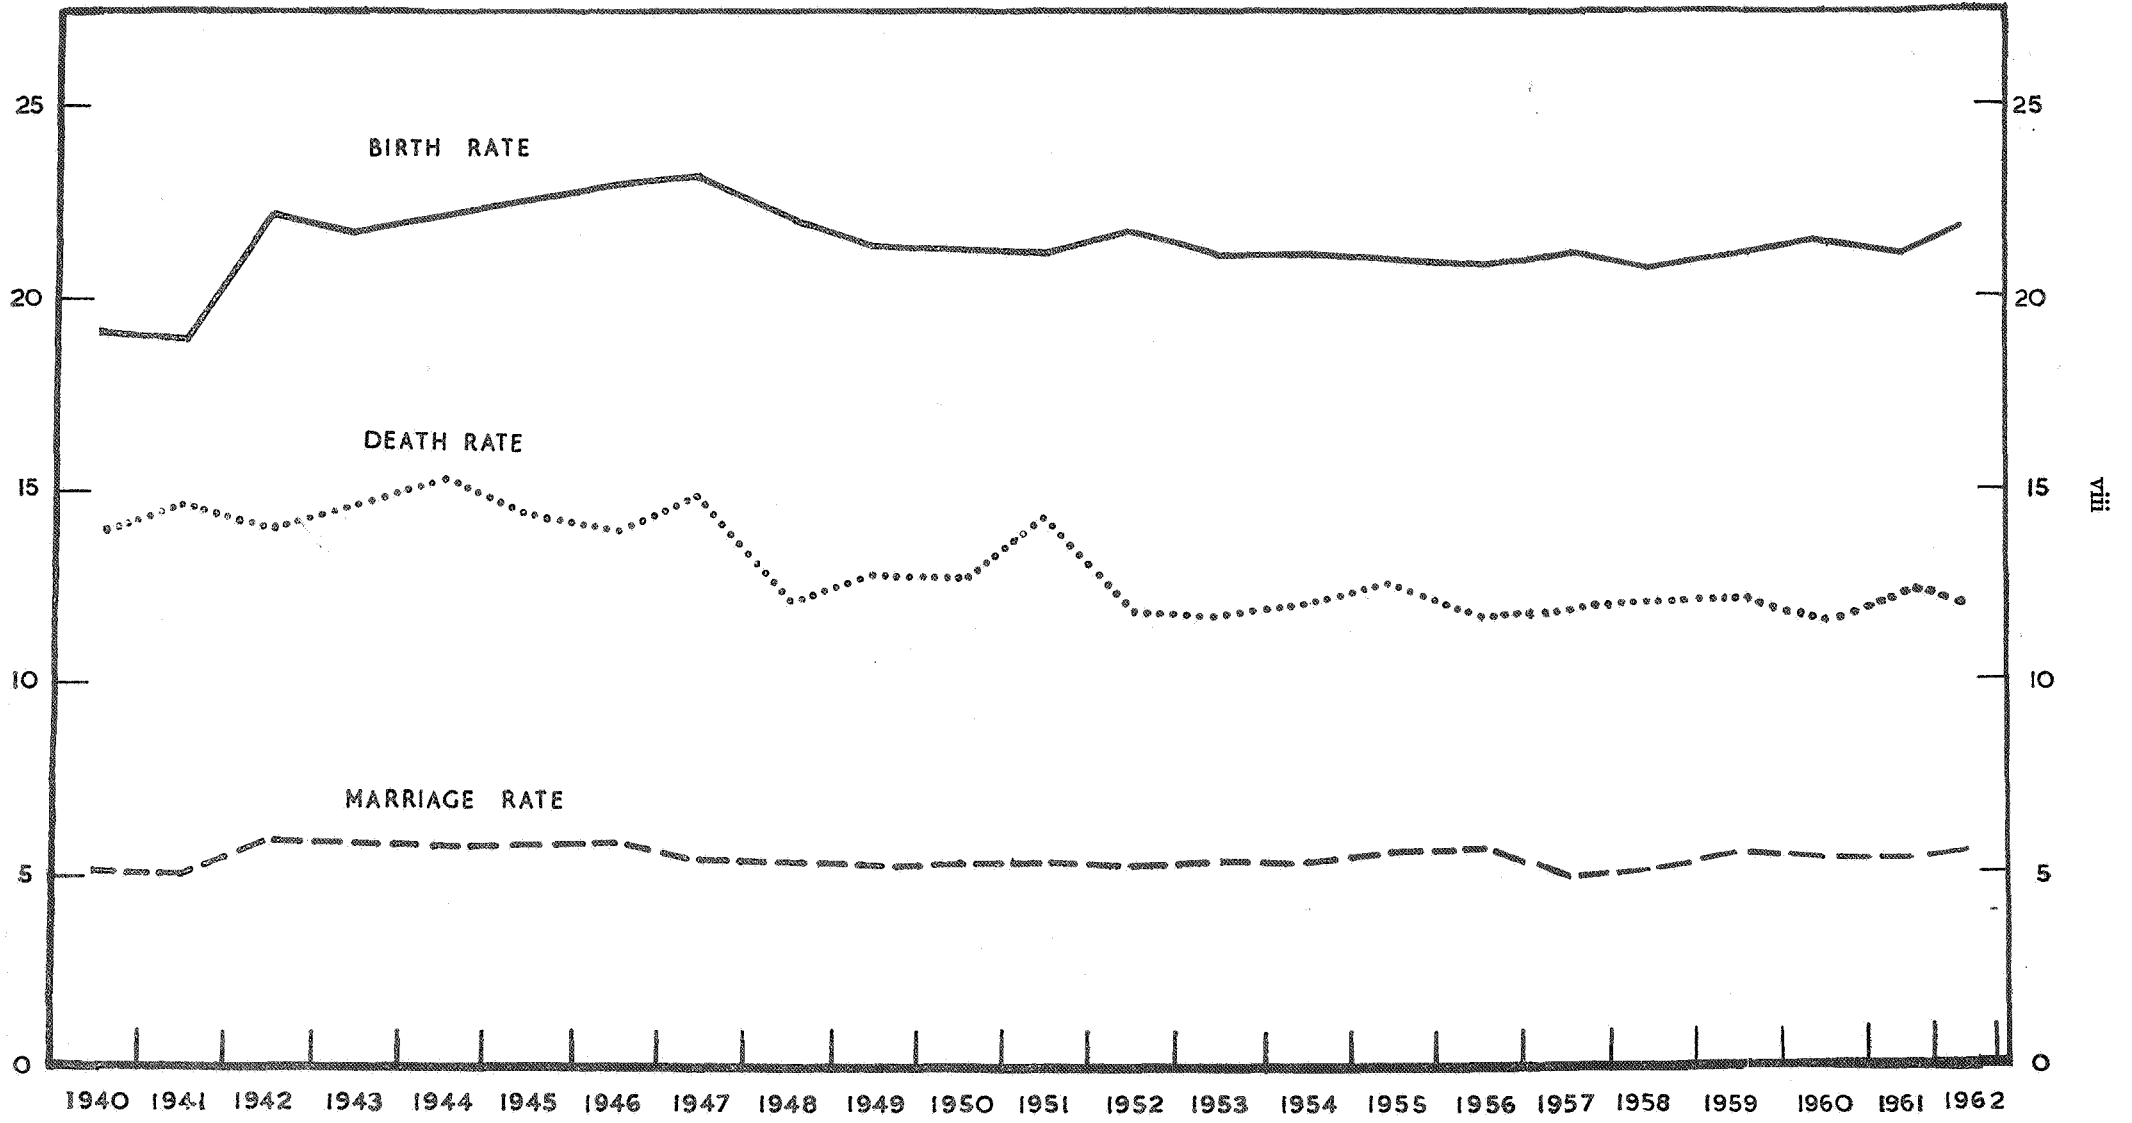

**Issue of Authority for Registration.**—Births and deaths which have not been registered within one year of their occurrence can be registered only on the authority of An tArd-Chlaraitheóir. The number of births registered on the authority of An tArd-Chlaraitheóir in 1962 was 732 and the number of deaths registered was 170. Throughout the tables in this Report these births and deaths have been excluded.

**Population.**—The estimated population in April, 1962 was 2,824,000.

Diagram 1.

BIRTH, MARRIAGE AND DEATH RATES, (PER 1,000 POPULATION) 1940-1962

## MARRIAGES

An alteration in the form of the marriage register was made in 1957 with a view to increasing the amount of statistical information available and bringing Irish statistics of marriages into conformity with international recommendations made by the United Nations Organisation. The column of the register headed "Age" was replaced by a column headed "Date of birth" with the result that, whereas up to 1956 the only entries made were "full age" or "minor", the exact age of persons married is now available. In addition a question is asked on "Intended future permanent residence", enabling an examination to be made of the numbers taking up residence in the different parts of the country or going abroad. The classifications of marriages prepared are shown in TABLES 38 to 55.

The number of marriages registered in 1962 was 15,627 representing an increase of 298 on the previous year. The 1962 marriage rate at 5.5 per 1,000 population compared with 5.4 in 1961, 5.5 in 1960 and 5.4 in 1959. TABLES 4 and 5 of this Report show the average numbers of marriages registered and marriage rates for ten year periods since 1864 and by single years since 1951. The following table compares the marriage rate in Ireland in the years 1952 to 1962 with those in the Six Counties, England and Wales and Scotland.

TABLE I

NUMBER OF MARRIAGES PER 1,000 POPULATION IN IRELAND AND NEIGHBOURING COUNTRIES, 1952-1962

Year	Ireland*	Six Counties	England and Wales	Scotland
1952	5.4	6.8	8.0	8.0
1953	5.4	6.8	7.8	8.0
1954	5.4	6.6	7.7	8.2
1955	5.6	6.8	8.1	8.4
1956	5.8	6.7	7.9	8.5
1957	5.1	6.7	7.7	8.3
1958	5.3	6.6	7.5	8.0
1959	5.4	6.8	7.5	7.8
1960	5.5	7.0	7.5	7.7
1961	5.4	6.9	7.5	7.8
1962	5.5	6.9	7.5	7.7

\*Exclusive of the Six Counties

An increase in the marriage rate occurred in Ireland between 1961 and 1962 but in England and Wales and The Six Counties there was no change, whilst in Scotland a slight decrease was recorded. It will be noted that the rate has remained constant in this country in the period 1952-1962, while in England, Wales and Scotland the rate has fallen.

## Age at marriage

Particulars of the ages of persons marrying in this country were obtained at the 1946 Census of Population. At that census persons were asked to state their date of marriage and a special analysis was made of 14,338 marriages which had taken place in the preceding twelve months and in the case of which the husband and wife were enumerated on the same census schedule. Corresponding data have been available since 1957 from marriage registrations and the results obtained from the 1962 marriage registrations make possible an examination of the trends in age at marriage over the intervening period, as may be seen from the following table.

TABLE II

PERCENTAGE DISTRIBUTION OF MARRIAGES ACCORDING TO AGE OF GROOM AND AGE OF BRIDE AND AVERAGE AGE AT MARRIAGE IN 1945-1946 AND IN EACH YEAR 1959 TO 1962.

Age group	Distribution according to age of groom					Distribution according to age of bride				
	1945-46	1959	1960	1961	1962	1945-46	1959	1960	1961	1962
Under 20 years ..	1.0	1.4	1.5	1.7	2.0	6.6	7.1	7.4	7.8	8.8
20 to 24 years ..	14.3	21.8	23.1	24.1	25.9	29.5	38.6	39.0	40.4	41.2
25 to 29 years ..	25.7	32.1	32.1	32.2	32.2	31.1	29.2	28.6	28.5	27.5
30 to 34 years ..	24.2	18.8	18.9	18.6	17.9	19.9	13.8	13.6	12.7	12.1
35 to 44 years ..	25.8	18.7	17.6	16.6	15.4	11.1	9.0	9.1	8.3	8.2
45 years and over	9.0	7.1	6.8	6.8	6.6	1.9	2.2	2.3	2.3	2.2
Total ..	100-	100-	100-	100-	100-	100-	100-	100-	100-	100-
Average age ..	33.1	31.1	30.9	30.6	30.3	28.0	27.1	27.1	26.9	26.6

X

X

Whereas, in 1945-46, 59 per cent of the men who married were aged 30 years and over the proportion over this age had fallen to 39.9 in 1962, the average age of men at marriage declining from 33.1 years in 1945-46 to 30.3 years in 1962. In 1945-46, 32.9 per cent of women marrying were aged 30 years and over, compared with 22.5 per cent in 1962, while the average age at marriage declined from 28.0 years in 1945-46 to 26.6 in 1962. In TABLE 39 the marriages registered in 1962 are shown cross-classified by age of groom and age of bride in single years while in TABLE 40 similar particulars are shown for marriages between bachelors and spinsters. From the latter table it may be calculated that the average ages of bachelors and spinsters marrying in 1962 were 29.8 and 26.2 respectively.

A comparison of marriage rates per 1,000 population by age groups in Ireland in 1962 and in England and Wales in 1961 is made in Table III. The figures for Ireland were obtained by dividing the number of males marrying in each group by the total number of single and widowed males in that age group and similarly for females. In obtaining the figures for England and Wales divorced persons were also included.

TABLE III

MARRIAGE RATES PER 1,000 CORRESPONDING POPULATION BY AGE GROUP IRELAND\*, 1962 AND ENGLAND AND WALES, 1961

Age groups	Males		Females	
	Ireland* 1962	England and Wales, 1961	Ireland* 1962	England and Wales, 1961
15-19 years .. ..	2.2	13.2	11.3	60.8
20-24 years .. ..	48.0	159.1	99.5	272.4
25-29 years .. ..	93.0	192.4	121.6	188.6
30-34 years .. ..	69.1	115.8	76.3	108.0
35-39 years .. ..	43.8	71.2	39.1	57.0
40-44 years .. ..	28.1	46.1	17.5	36.0
45-49 years .. ..	17.2	38.1	7.0	24.8
50-54 years .. ..	8.9	32.8	3.2	14.3
55-59 years .. ..	5.5	26.8	1.8	8.1
60-64 years .. ..	2.3	25.4	0.6	5.7
65 years and over ..	0.7	9.3	0.1	1.3
Total, 15 years and over	27.4	68.3	29.1	52.0

\*Exclusive of the Six Counties

For each sex and age group the marriage rates in Ireland were considerably below those in England and Wales. In the 15-19 year age group the marriage rate in England and Wales was six times that in Ireland in the case of both males and females. In the 20-24 year group the England and Wales rate for males was almost four times that in Ireland and, for females, almost three times that in Ireland.

#### Mode of celebration

The number of marriages celebrated in accordance with the rites and ceremonies of the Catholic Church registered in 1962 amounted to 14,977 (equal to 95.8 per cent of the total) and other marriages numbered 650, of which 438 were according to the rites and ceremonies of the Church of Ireland, 120 in Presbyterian Churches, 28 in Methodist Churches, 14 according to Jewish Rites, 3 in registered buildings belonging to other religious denominations and 47 by civil contract in Registrars' Offices.

The number of Catholic marriages recorded during 1962 corresponds to a rate of 5.59 per 1,000 of the Catholic population, being .06 above that for the preceding year. The rate for all other marriages in 1962 was 4.49 per 1,000 of all persons other than Catholics in the population, an increase of .65 on the corresponding rate for 1961. Details of marriages registered in each of the years 1952 to 1962 are given in Table IV.

TABLE IV

MARRIAGES REGISTERED IN THE YEARS 1952 TO 1962 ACCORDING TO THE MODE OF CELEBRATION, AND THE RATES PER 1,000 CORRESPONDING POPULATION FOR CATHOLIC AND ALL OTHER MARRIAGES

Year	Marriages registered other than Catholic							Catholic marriages registered	Total marriages registered	Rate per 1,000 estimated corresponding population		
	Church of Ireland	Presbyterian	Jewish	Society of Friends	Other religious denominations	In Registrars' Offices	Total			Catholic marriages	All other marriages	Total marriages
1952	582	147	30	2	32	98	891	14,985	15,876	5.38	5.50	5.38

1961	375	92	17	.	34	39	557	14,772	15,329	5.53	3.84	5.44
1962	438	120	14	.	31	47	650	14,977	15,627	5.59	4.49	5.53

Marriages are classified according to form of ceremony, age of groom and age of bride in TABLES 41 and 42. There was little difference between the various religious denominations in respect of average age at marriage in 1962. For Catholic marriages the average age of groom was 30.3 years, compared with 31.0 years for other marriages (including Civil marriages). The average age of bride for Catholic marriages was 26.6 years and, for other marriages, 26.8 years.

#### Social group

A classification which has been widely used in recent years in census of population statistics is that by Social Group. This classification, when applied to a person at work, is determined by his or her occupation, although status (i.e., whether the person is an employer, own-account worker or employee) is also taken into account. The social group of a person not at work is considered to be that of the gainfully occupied person on whom he or she is dependent. The men and women married in 1962 were classified by social group on the basis of the information as to occupation given in the marriage register, and the results obtained are given in TABLES 43 to 45.

TABLE 43 shows men classified by social group, age at marriage and the average age at marriage. The average age at marriage of 35.7 years in the "Farmers, relatives assisting and farm managers" social group was appreciably higher than in any of the other social groups, while the lowest average age of 28.3 years, occurred in the "Skilled manual workers" group. In the case of females the difficulty arises that since many are not gainfully occupied immediately before marriage no information as to occupation is given, with the result that in many cases the social code can not be assigned. The average age of women at marriage ranged from 31.3 years in the case of the "Salaried employees" group to 24.1 years in the case of unskilled manual workers, as may be seen from Table 44. The most striking feature of this table is the much lower average age in the case of the wage earner groups, and particularly the manual worker groups than among the remaining groups.

TABLE 45 shows marriages registered in 1962 cross-classified by the social groups of groom and bride. Of the women marrying men in the "Farmers, relatives assisting and farm managers" social group, in the case of whom occupation was stated, 28 per cent were in the same social group, 21 per cent in the "Lower professional" group and 40 per cent in the "Intermediate and other non-manual workers" groups, while there were small percentages in each of the other social groups. Of the women marrying men in the "Skilled manual worker" group 47 per cent were in the "Intermediate and other non-manual workers" groups, 16 per cent were unskilled manual workers and 27 per cent were skilled and semi-skilled manual workers, there being smaller percentages in each of the other groups. The distribution, by social group, of women marrying men in each of the remaining social groups may be considered in the same way. Alternatively the table may be examined by considering the social groups of the men marrying the women in each particular social group. Thus it will be seen that less than 18 per cent of the women in the social group "Farmers, relatives assisting and farm managers" married men in social groups other than their own. A substantial number of women in the "Intermediate non-manual workers" group married men in each of the other social groups, but in the case of women in the "non-manual workers" group, the numbers marrying men in the "Higher professional", "Lower professional" or "Salaried employee" groups were relatively small. In the case of the majority of women in the "Skilled", "Semi-skilled" and "Unskilled manual worker" groups the husbands also belonged to these groups or to the "Intermediate and other non-manual workers" groups.

## Area of residence

Although the marriage registers in use prior to 1957 contained particulars of residence of bride and groom before marriage the difficulties of analysis by clerical methods prevented the summarisation of this information, hence only figures for marriages registered in each area were compiled. Following the alteration in the form of the marriage register in 1957 punched-card summarisation methods were introduced, with the result that four districts may now be considered in relation to each marriage, namely that in which the marriage took place, the areas of residence of the bride and groom prior to marriage, and the intended future residence. In TABLE 38 figures for marriages according to place of occurrence are given for 1962 in the same form as in earlier Reports in this series. A comparison between the area of residence of the bride before the ceremony and the area in which the marriage took place is made for 1962 in Table V.

TABLE V

COMPARISON OF AREA IN WHICH MARRIAGE TOOK PLACE WITH AREA OF RESIDENCE OF BRIDE, 1962

Area in which registered (1)	Total Marriages (2)	Marriages in the case of which bride was resident in		Col. (3) as percentage of col. (2) (5)
		Same area (3)	Other areas* (4)

<b>Total</b> .. .. .	<b>15,627</b>	<b>12,492</b>	<b>3,135</b>	<b>79.9</b>

\*Includes cases in which area of residence of bride was not stated.

In TABLES 46 and 47 marriages are shown classified by area of residence prior to marriage and age group of groom and bride. Confining attention to the marriages in the case of which the area of residence was within the State, it will be seen that the average age at marriage is appreciably lower in predominantly urban than in rural areas. Thus in the four county boroughs the average age of groom was under 29 years, whereas in the counties Longford, Clare, Galway, Leitrim, Tipperary N.R., Roscommon, Sligo and Cavan the average age was over 33 years. The average age of women at marriage was under 27 years in the four county boroughs, the borough of Dun Laoghaire and in most of the counties of Leinster. In all the counties of Connaught and Ulster (part) the average age was over 27 years.

TABLE 48 shows marriages cross-classified by area of residence before marriage of groom and bride. As is to be expected, in the great majority of cases the groom and bride were from the same or neighbouring counties. A feature of the table is the large number of cases in which the address of the groom or bride or both groom and bride was outside the State. Thus 1,054 of the men married in the State in 1962 were returned as residing in England, Wales or Scotland, 204 in the Six Counties and 104 in other countries. The number of brides who were resident before marriage in England, Wales or Scotland was 714, the number from the Six Counties was 110 and the number from other countries was 48. In 744 cases both the groom and bride were from outside the State. In the past it has been the practice to compute marriage rates for counties and county boroughs by relating the marriages registered in each area to the resident population of that area. In Table VI the rates calculated in this way are compared with rates obtained by relating marriages classified by area of residence of groom before marriage to total resident population.

TABLE VI

MARRIAGE RATES PER 1,000 POPULATION OF EACH COUNTY AND COUNTY BOROUGH CALCULATED USING (a) TOTAL MARRIAGES REGISTERED IN EACH AREA AND (b) MARRIAGES OF MEN FROM THAT AREA IN 1962.

Area	Rate (a)	Rate (b)	Area	Rate (a)	Rate (b)
Carlow .. .. .	5.7	5.2	Clare .. .. .	3.7	3.5
Dublin County Borough ..	9.1	7.6	Cork County Borough ..	10.7	7.3
Dun Laoghaire Borough ..	7.4	4.9	Cork County .. .. .	4.1	4.7
Dublin County (remainder) ..	3.9	3.7	Kerry .. .. .	4.1	3.9
Kildare .. .. .	4.5	5.3	Limerick County Borough ..	9.9	5.1
Kilkenny .. .. .	4.2	4.0	Limerick County .. .. .	3.4	4.7
Laois .. .. .	3.8	4.3	Tipperary N.R. .. .. .	4.8	5.2
Longford .. .. .	3.4	3.6	Tipperary S.R. .. .. .	4.4	4.3
Louth .. .. .	6.5	6.0	Waterford County Borough ..	7.5	5.6
Meath .. .. .	4.4	4.8	Waterford County .. .. .	4.9	4.7
Offaly .. .. .	4.5	4.6	Munster .. .. .	5.2	4.8
Westmeath .. .. .	5.5	5.2	Galway .. .. .	3.8	3.7
Wexford .. .. .	5.0	4.8	Leitrim .. .. .	3.3	3.2
Wicklow .. .. .	6.1	5.8	Mayo .. .. .	3.4	3.1
Leinster .. .. .	6.6	5.9	Roscommon .. .. .	2.6	2.7
Cavan .. .. .	4.6	4.1	Sligo .. .. .	3.5	3.5
Donegal .. .. .	4.5	3.3	Connacht .. .. .	3.4	3.3
Monaghan .. .. .	5.1	4.6	Total .. .. .	5.5	5.0
Ulster (part of) .. .. .	4.7	3.8			

It will be observed that the total rates (a) and (b) differ on account of the fact that marriages of men whose area of residence was outside the country were included in the calculation of rate (a) and excluded from rate (b). The main difference between rates (a) and (b) is in the much lower figures for the county boroughs. In the case of the question on intended future permanent residence the accuracy of many of the entries was not as high as for the other information supplied. There were 480 marriages registered in which no information on future residence was provided. Nevertheless the answers to this question revealed that, in a very high proportion of cases, the intended future residence was outside the State. Out of the total of 15,627 marriages registered in 1962 there were 2,037 or 13 per cent where the intended future residence was outside the State. These cases are examined in some detail in TABLES 49 to 55. In the case of 1,535 marriages the future residence was in England and Wales, 203 in the Six Counties, 69 in Scotland, 44 in other parts of Europe, 113 in the United States of America, 18 in Canada, 4 in Australia and New Zealand and 51 elsewhere. The age distributions and average ages of the grooms and brides going to the various countries are shown in TABLES 49 and 50 respectively. It will be seen that the average ages of the men and women marrying and then going abroad were appreciably below those

for all marriages in the State. The average age in the case of men going to the Continent of Europe was somewhat lower than those going elsewhere. The marriages of persons going abroad are shown classified by social groups of groom and bride in TABLES 51 and 52 respectively. By comparing TABLES 43 and 51 it is possible to examine the proportions of men marrying in each social group who intended to reside outside the country, and it is found that this proportion varied widely between the different groups. Table VII contains the results obtained.

TABLE VII

PERCENTAGE OF MEN MARRYING IN EACH SOCIAL GROUP WHOSE INTENDED FUTURE RESIDENCE WAS OUTSIDE THE STATE IN 1961 AND 1962

Social group of groom	Percentage with intended future residence outside the State	
	1961	1962
Farmers, relatives assisting and farm managers ..	$\frac{\%}{3}$	$\frac{\%}{2}$
Other agricultural occupations and fishermen ..	6	3
Higher professionals .. .. .	33	32
Lower professionals .. .. .	19	19
Employers and Managers (including shopkeepers) ..	12	10
Salaried employees .. .. .	16	15
Intermediate non-manual workers .. .. .	14	14
Other non-manual workers .. .. .	17	15
Skilled manual workers .. .. .	21	18
Semi-skilled manual workers .. .. .	18	16
Unskilled manual workers .. .. .	19	15
<b>Total, all groups combined ..</b>	<b>15</b>	<b>13</b>

A classification of marriages of persons going abroad, by form of marriage ceremony, is made in TABLE 53. By comparison with TABLE 38, it will be seen that the proportions that these represent of all marriages in the State are as shown in the following table :—

TABLE VIII

PERCENTAGE OF MARRIAGES OF EACH DENOMINATION IN THE CASE OF WHICH THE FUTURE RESIDENCE WAS OUTSIDE THE STATE IN 1961 AND 1962

Form of ceremony	Percentage with intended future residence outside the State	
	1961	1962
Catholic .. .. .	$\frac{\%}{14}$	$\frac{\%}{12}$
Church of Ireland .. .. .	28	27
Presbyterian .. .. .	39	39
Methodist .. .. .	38*	21*
Jewish .. .. .	12*	50*
Civil marriage .. .. .	31*	23*
<b>Total .....</b>	<b>15</b>	<b>13</b>

\*Percentages based on small numbers.

Finally, in TABLES 54 and 55 the marriages in the case of which the intended future residence was outside the State are shown classified by area of residence before marriage of groom and bride. The proportions which these marriages represent of the total when classified according to area of residence of groom are shown in Table IX.

TABLE IX

PERCENTAGE OF MARRIAGES IN 1961 AND 1962, IN THE CASE OF WHICH THE INTENDED FUTURE RESIDENCE WAS OUTSIDE THE STATE, ACCORDING TO AREA OF RESIDENCE OF GROOM BEFORE MARRIAGE

Area of residence of groom before marriage	Percentage with intended future residence outside the State	
	1961	1962
Dublin County Borough and Dun Laoghaire Borough	% 9	% 6
Remainder of Leinster .. .. .	5	5
Munster .. .. .	4	3
Connacht .. .. .	5	4
Ulster (part of) .. .. .	7	8
Outside the State .. .. .	91	91

## BIRTHS

Under a system for the collection of statistics of births introduced in 1955 a considerable volume of information dealing with such matters as age of mother at maternity, parity of birth and duration of marriage has become available. These statistics in respect of births registered in 1962 are presented in TABLES 30 to 37.

The number of births registered during the year 1962 was 61,782, the males numbering 31,650 and the females 30,132. Births registered in 1961 numbered 59,825 and in 1960, 60,735. The birth rate in 1962 was 21.9 per 1,000 population, compared with 21.2 in 1961 and 21.4 in 1960.

Table X compares the birth rates in Ireland in the years 1952 to 1962 with those in the Six Counties, England and Wales and Scotland.

TABLE X

NUMBERS OF BIRTHS IN IRELAND\* AND BIRTH RATES PER 1,000 POPULATION IN IRELAND AND NEIGHBOURING COUNTRIES, 1952-1962

Year	Numbers of births (in thousands) Ireland*	Birth rate per 1,000 population			
		Ireland*	Six Counties	England and Wales	Scotland
1952	64.6	21.9	20.9	15.3	17.7
1953	62.6	21.2	20.9	15.5	17.8
1954	62.5	21.3	20.8	15.2	18.0
1955	61.6	21.1	20.8	15.0	18.0
1956	60.7	21.0	21.1	15.6	18.5
1957	61.2	21.2	21.5	16.1	19.0
1958	59.5	20.9	21.6	16.4	19.2
1959	60.2	21.1	21.9	16.5	19.1
1960	60.7	21.5	22.5	17.1	19.4
1961	59.8	21.2	22.4	17.4	19.5
1962	61.8	21.9	22.7	18.0	20.1

\*Exclusive of the Six Counties.

In the years 1952 to 1955 the birth rates for this country were higher than those for the other areas but, from 1956 onwards, the Six County rates were the highest. In all areas the 1962 rates showed slight increases over those for 1961.

## Classification by age at maternity, parity and duration of marriage

In TABLE 34 is shown the total number of births registered in 1962, classified by age of mother at maternity and number of previous live-born children. The number of births in the case of which the mother's age was not stated was 452 or 0.7 per cent of the total, and the number where the parity was not stated was 324 or 0.5 per cent of the total. The results contained in TABLE 34 are summarised in Table XI.

TABLE XI

## BIRTHS REGISTERED IN 1962 CLASSIFIED BY AGE OF MOTHER AT MATERNITY AND NUMBER OF PREVIOUS CHILDREN

Age at maternity	Number of previous children									
	Total	0	1	2	3	4	5 to 9	10 to 14	15 and over	Not stated
Under 20 years ..	1,291	1,035	207	39	7	2	.	.	.	1
20-24 years ..	9,082	4,658	2,452	1,236	471	174	83	1	.	7
25-29 years ..	16,309	4,360	4,232	3,322	2,012	1,172	1,180	12	.	19
30-34 years ..	16,315	2,100	2,632	3,177	2,742	2,051	3,352	236	.	25
35-39 years ..	12,946	875	1,236	1,721	1,920	1,841	4,553	743	33	24
40-44 years ..	5,010	206	282	382	564	672	2,270	556	70	8
45 years and over ..	377	8	12	15	25	48	192	65	12	.
Not stated ..	452	78	26	30	29	11	33	4	1	240
<b>Total ..</b>	<b>61,782</b>	<b>13,320</b>	<b>11,079</b>	<b>9,922</b>	<b>7,770</b>	<b>5,971</b>	<b>11,663</b>	<b>1,617</b>	<b>116</b>	<b>324</b>

In preparing this table the procedure in the case of multiple births was to count each child as an individual birth. For instance if a fifth pregnancy produced twins the children would be classified as a fifth and sixth child in parity order.

There was little change from 1961 to 1962 in the distribution of births according to age of mother at maternity, as may be seen from Table XII in the calculation of which only those births where the age was stated are, of course, included. This table also illustrates the striking difference between this country and England and Wales and Scotland in respect of the distribution ages of mothers at maternity.

TABLE XII

## PERCENTAGE DISTRIBUTION OF BIRTHS ACCORDING TO AGE OF MOTHER AT MATERNITY IN IRELAND\* IN 1961 AND 1962, AND IN ENGLAND AND WALES AND SCOTLAND IN 1961

Age at maternity	Ireland*		England and Wales (1961)	Scotland (1961)
	1962	1961		
Under 20 years ..	% 2.1	% 1.8	% 7.4	% 6.3
20-24 years ..	14.8	14.0	30.8	30.8
25-29 years ..	26.6	26.5	30.6	31.0
30-34 years ..	26.6	27.2	18.8	19.3
35-39 years ..	21.1	21.7	9.5	9.8
40-44 years ..	8.2	8.2	2.7	2.7
45 years and over ..	0.6	0.6	0.2	0.1
<b>Total ..</b>	<b>100-</b>	<b>100-</b>	<b>100-</b>	<b>100-</b>
Average age at maternity	31.3	31.5	27.6	27.7

\*Exclusive of the Six Counties.

The difference between this country and England and Wales and Scotland shown by Table XII is due to the facts that (a) women in Ireland marry at a later age and (b) married women in Ireland have on the average a larger number of children and so continue bearing children for a greater number of years. When attention is confined to legitimate first births, in order to eliminate the effect of factor (b), the difference remains very pronounced (as may be seen from the Report for the year 1955 in this series).

Fertility rates in Ireland in 1962 and in England and Wales in 1961 are compared in Table XIII.

TABLE XIII

BIRTHS PER 1,000 WOMEN IN EACH AGE GROUP, IRELAND\*, 1962 AND ENGLAND AND WALES, 1961

Age of mother at maternity	Legitimate and illegitimate births (all women)		Legitimate births per 1,000 married women		Illegitimate births per 1,000 single, widowed and divorced women	
	Ireland*	England and Wales	Ireland*	England and Wales	Ireland*	England and Wales
15-19 years ..	11.4	37.9	739.1 ✓	464.7	3.3	8.1
20-24 years ..	118.0	173.6	519.4 ✓	276.5	6.4	26.2
25-29 years ..	224.8	177.5	406.7 ✓	201.3	5.3	44.0
30-34 years ..	211.9	103.0	302.2 ✓	110.2	3.9	40.7
35-39 years ..	153.1	47.8	203.4 ✓	51.2	2.9	21.5
40-44 years ..	59.0	14.1	78.8 ✓	15.2	0.6	7.2
45-49 years ..	4.4	0.9	6.1 ✓	0.9	0.1	0.4
Total, 15-49 years	103.3	75.7	201.5	100.8	3.7	15.7

\*Exclusive of the Six Counties.

In each age group the number of legitimate births per 1,000 married women was considerably higher in Ireland than in England and Wales. In the 15-19 year group the Irish rate was almost 60 per cent above that in England and Wales, in the 20-24 year group 88 per cent greater, while the excess in the Irish rate rose steadily with increasing age. The number of illegitimate births per 1,000 single, widowed or divorced women was appreciably lower at all ages in Ireland than in England and Wales. On account of the much higher proportion of women married at the younger ages in England and Wales the fertility rates for all women combined were higher in England and Wales than in Ireland in the 15-19 and 20-4 year groups, but at the later ages the Irish rate was considerably higher.

The percentage distribution of births according to the number of previous children in 1961 and 1962 is shown in Table XIV and a comparison made with the corresponding distributions in England and Wales and Scotland in 1961.

TABLE XIV

PERCENTAGE DISTRIBUTION OF BIRTHS ACCORDING TO NUMBER OF PREVIOUS CHILDREN IN IRELAND\* IN 1961 AND 1962 AND IN ENGLAND AND WALES AND SCOTLAND IN 1961

Number of previous children	Ireland*		England and Wales (1961)	Scotland (1961)
	1962	1961		
0 .. ..	% 21.7	% 21.0	% 34.2	% 36.8
1 .. ..	18.0	17.9	28.5	30.5
2 .. ..	16.2	16.2	17.5	16.4
3 .. ..	12.6	13.0	9.4	7.9
4 .. ..	9.7	9.7	4.8	3.9
5 to 9 .. ..	19.0	19.4	5.4	4.3
10 to 14 .. ..	2.6	2.7	0.2	0.2
15 and over .. ..	0.2	0.1	0.0	0.0
Total .. ..	100-	100-	100-	100-

\*Exclusive of the Six Counties.

The difference between the years 1961 and 1962 in respect of the percentage distribution according to number of previous children was very slight. The percentage of women with large families was considerably higher in Ireland than in England and Wales or Scotland. Thus, in Ireland in 1961, 19.4 per cent of the mothers had 5 to 9 previous children, the corresponding percentages being only 5.4 in England and Wales and 4.3 in Scotland.

### Births by date of occurrence

In TABLE 37 details of the number of births which occurred on each day during 1962 are set out.

Table XV shows the number of children born in each month in 1962, classified according to the year in which the births were registered. The average daily number of births and the percentage ratio of males to females in each month are also included in the table.

TABLE XV

BIRTHS BY MONTH OF OCCURRENCE IN 1962, CLASSIFIED ACCORDING TO YEAR OF REGISTRATION, AVERAGE DAILY NUMBER OF BIRTHS AND PERCENTAGE RATIO OF MALES TO FEMALES

Month of occurrence	Total No. of births	No. registered during 1962	No. registered during 1963	Average daily no. of births	Ratio of males to females
January, 1962 ..	4,954	4,946	8	160	104·8
February, ,, ..	4,774	4,768	6	171	107·3
March, ,, ..	5,423	5,412	11	175	106·7
April, ,, ..	5,400	5,389	11	180	107·2
May, ,, ..	5,751	5,730	21	186	103·6
June, ,, ..	5,443	5,423	20	181	103·6
July, ,, ..	5,481	5,465	16	177	104·0
August, ,, ..	5,313	5,286	27	171	104·8
September, ,, ..	4,877	4,837	40	163	107·7
October, ,, ..	4,938	4,832	106	159	98·4
November, ,, ..	4,527	4,215	312	151	108·4
December, ,, ..	4,757	2,513	2,244	153	105·8
Total .. ..	61,638	58,816	2,822	169	105·1

Of the 61,638 births which took place in 1962, 31,587 were males and 30,051 were females. The number of births occurring in 1962 which were not registered until 1963 amounted to 2,822 but almost 80 per cent of these registrations were in respect of children born in the month of December, 1962.

The average number of children born daily throughout 1962 was 169 and ranged from 186 in May to 151 in November. It will be observed from the table that births were more numerous in the spring and summer months than at other times during the year.

During 1962 the over-all ratio of male to female births was 105·1 to 100. In every month except October the male births exceeded those of females, the proportions ranging from 108·4 males per 100 females in November to 98·4 males per 100 females in October.

### Multiple births

The number of infants born alive in multiple births registered in 1962 was 1,896, consisting of 926 pair of twins, 12 sets of triplets and two sets of quadruplets.

## DEATHS

The number of deaths registered during the year 1962 was 33,838 of which 18,355 were those of males and 15,483 those of females. This is equivalent to a rate of 11.98 deaths per 1,000 total population, compared with 12.33 in the previous year and 11.53 in 1960.

In Table 9 are shown the average annual death rates, by age group, for decennial periods from 1864 to 1960 and the death rates for 1961 and 1962.

While the crude death rate per 1,000 population has shown a gradual downward trend since the beginning of the century, striking falls have occurred in the death rates at the younger ages. In the age groups above 65 years little change has occurred in the death rates since the period 1901-1910.

Table XVI compares the death rates in the years 1951-62 with those in the Six Counties, England and Wales and Scotland. In general the death rate in this country was somewhat higher than those in England and Wales and the Six Counties and of about the same order as that in Scotland.

TABLE XVI

DEATH RATES PER 1,000 POPULATION IN IRELAND AND NEIGHBOURING COUNTRIES, 1951-1962

Year	Numbers of deaths (thousands) Ireland*	Death rate per 1,000 population			
		Ireland*	Six Counties	England and Wales	Scotland
1951 ..	42.4	14.3	12.8	12.5	12.9
1952 ..	35.1	11.9	10.8	11.3	12.0
1953 ..	34.6	11.7	10.7	11.4	11.5
1954 ..	35.5	12.1	10.9	11.3	12.0
1955 ..	36.8	12.6	11.1	11.7	12.0
1956 ..	33.9	11.7	10.6	11.7	12.0
1957 ..	34.3	11.9	10.9	11.5	11.9
1958 ..	34.2	12.0	10.8	11.7	12.0
1959 ..	34.2	12.0	10.9	11.6	12.1
1960 ..	32.7	11.5	10.8	11.5	11.9
1961 ..	34.8	12.3	11.3	12.0	12.3
1962 ..	33.8	12.0	10.6	11.9	12.2

\*Exclusive of the Six Counties.

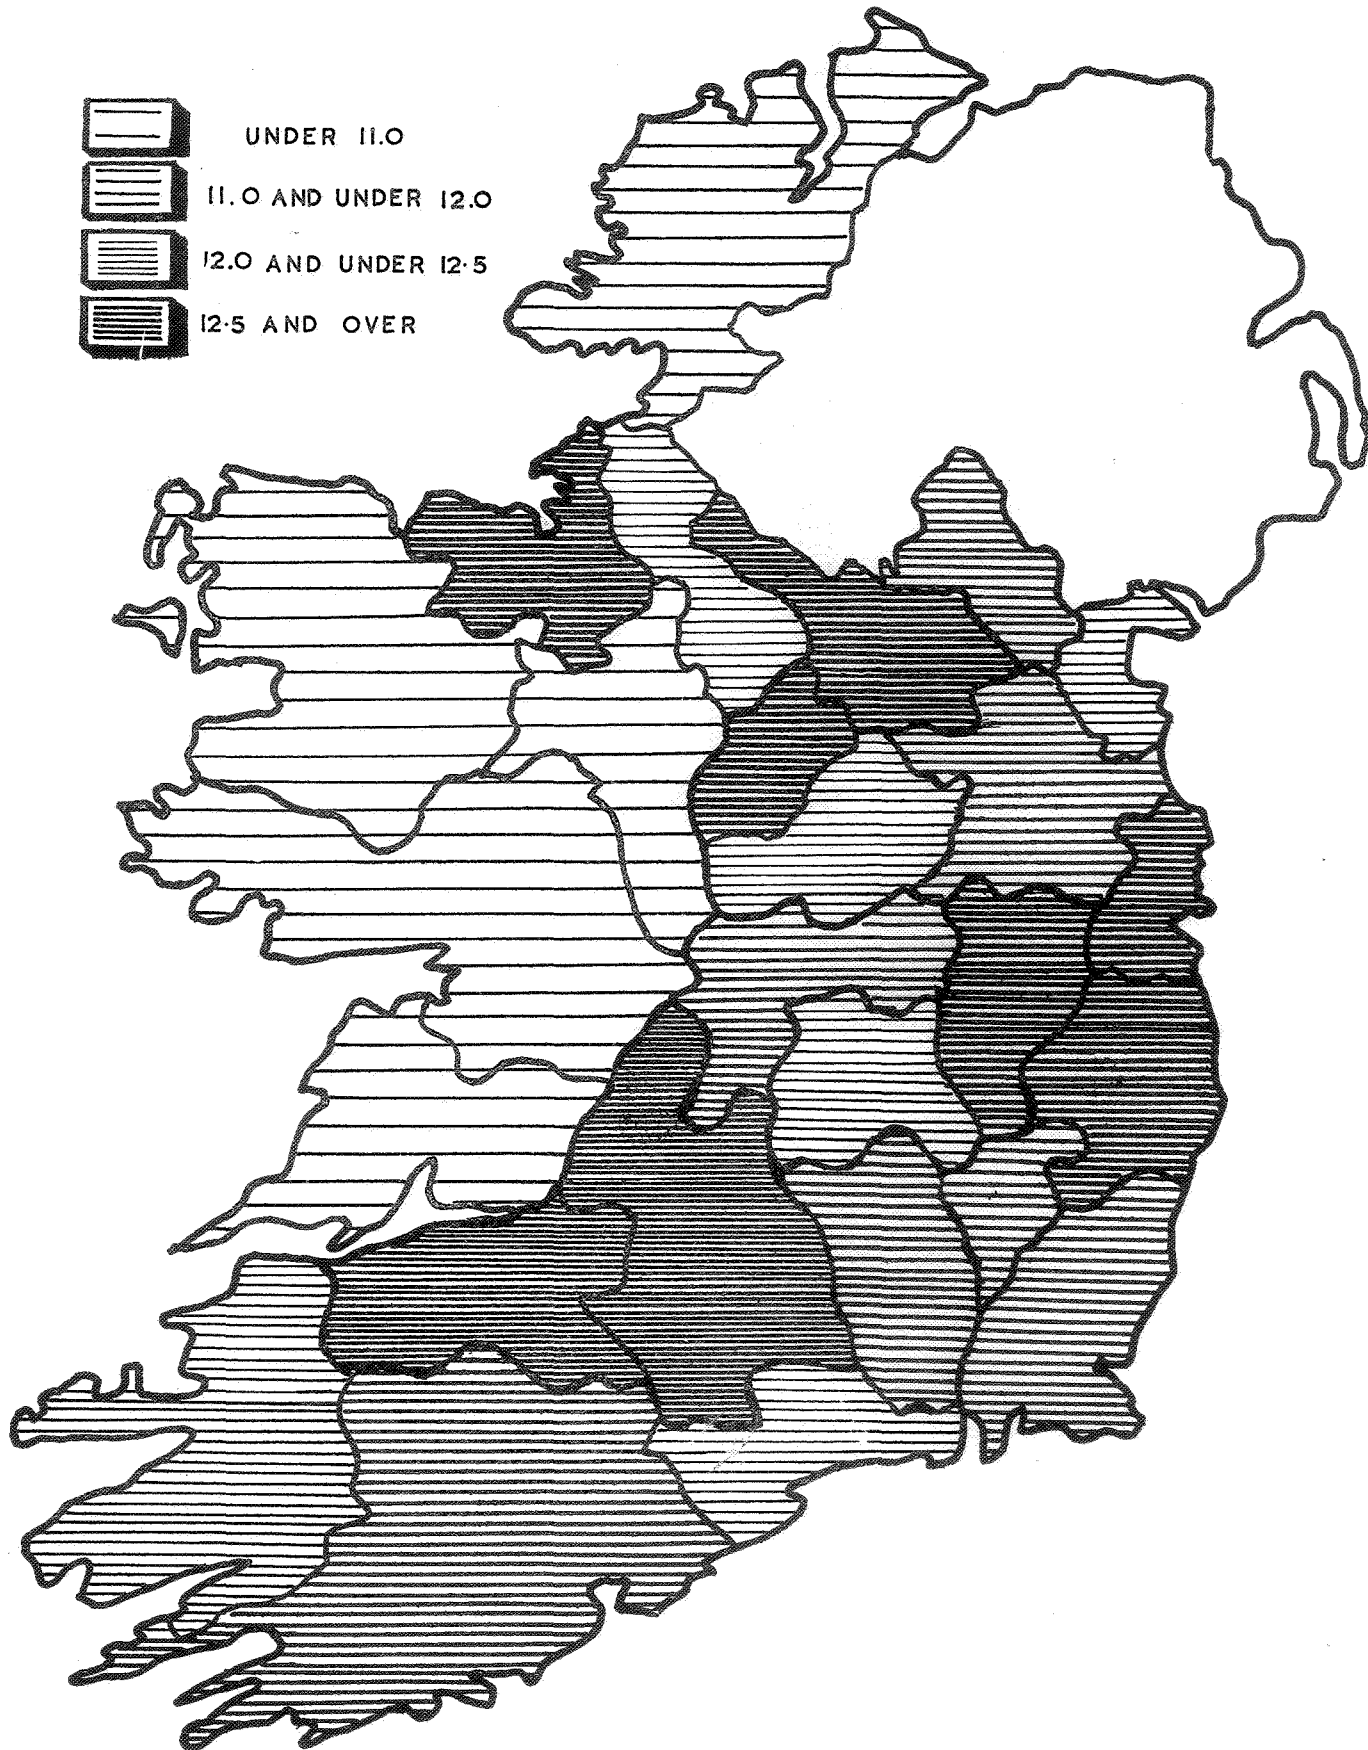

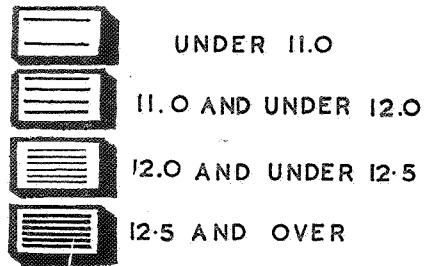

## Comparison between counties

A difficulty arises when comparisons are made between the death rates in different regions of the country, due to the fact that the age distribution of the population varies considerably from one county to another. Thus, if a particular county contains a large proportion of elderly persons the crude death rate per 1,000 population will be relatively high even if the health conditions in that county are better than the general average. To overcome this difficulty standardised death rates are prepared.

Diagram 2.

STANDARDISED DEATH RATES (PER 1,000 POPULATION)  
FROM ALL CAUSES 1962

For a particular county this is done by calculating the death rate in each age group of the population in that county and then multiplying the death rate in each age group by the total population in the whole country in that age group and summing the resulting products. This sum is then divided by the total population in the country at all ages to decide the standardised rate for the county.

TABLE XVII

## CRUDE AND STANDARDISED DEATH RATES IN EACH COUNTY AND COUNTY BOROUGH IN 1962

Area	Deaths per 1,000 population	
	Crude	Standardised
<b>Total</b> .. .. .	<b>11·98</b>	<b>11·98</b>
Carlow .. .. .	11·85	12·20
Dublin County Borough .. .. .	10·47	12·96
Dun Laoghaire Borough .. .. .	12·28	11·98
Dublin County (remainder) .. .. .	7·81	11·18
Kildare .. .. .	10·77	13·68
Kilkenny .. .. .	12·45	12·04
Laois .. .. .	12·11	11·68
Longford .. .. .	14·55	12·76
Louth .. .. .	10·49	11·69
Meath .. .. .	11·93	12·40
Offaly .. .. .	11·90	12·26
Westmeath .. .. .	11·86	11·48
Wexford .. .. .	12·88	12·18
Wicklow .. .. .	12·23	12·77
<b>Leinster</b> .. .. .	<b>10·97</b>	<b>12·45</b>
Clare .. .. .	13·08	10·82
Cork County Borough .. .. .	12·45	14·15
Cork County .. .. .	12·46	11·48
Kerry .. .. .	13·46	11·83
Limerick County Borough .. .. .	10·18	12·93
Limerick County .. .. .	13·72	13·03
Tipperary N.R. .. .. .	13·99	13·31
Tipperary S.R. .. .. .	12·96	12·73
Waterford County Borough .. .. .	12·40	13·68
Waterford County .. .. .	12·31	10·99
<b>Munster</b> .. .. .	<b>12·76</b>	<b>11·86</b>
Galway .. .. .	11·70	10·82
Leitrim .. .. .	15·36	11·92
Mayo .. .. .	12·71	10·01
Roscommon .. .. .	14·02	10·70
Sligo .. .. .	15·01	12·51
<b>Connacht</b> .. .. .	<b>13·04</b>	<b>10·86</b>
Cavan .. .. .	15·04	12·86
Donegal .. .. .	12·71	10·74
Monaghan .. .. .	13·10	12·17
<b>Ulster (part of)</b> .. .. .	<b>13·40</b>	<b>11·61</b>

In certain areas the standardised rates differ appreciably from the crude rates. The standardised death rates in 1962 were lowest in the Counties of Mayo, Roscommon, Donegal, Galway and Clare and highest in the County Boroughs of Cork and Waterford and the Counties of Kildare and Tipperary North.

The standardised death rate for each county is illustrated in Diagram 2.

### Causes of death

The tables in this Report showing cause of death are based on the Seventh Revision of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1955, prepared by the World Health Organisation. The Seventh Revision was used for the first time in classifying deaths by causes in the 1958 Report. From 1940 to 1949 the Fifth Revision was used, and the Reports for the years 1950 to 1957 were based on the Sixth Revision.

Table XVIII shows the average annual number of deaths and death rates from some of the principal groups of causes in the periods 1935-37, 1945-47, 1950-52, 1955-57 and 1960-62.

TABLE XVIII

AVERAGE ANNUAL NUMBER OF DEATHS AND DEATH RATES FROM PRINCIPAL CAUSES IN EACH PERIOD  
1935-37, 1945-47, 1950-52, 1955-57 and 1960-62

Causes	1935-37	1945-47	1950-52	1955-57	1960-62
	Average Annual Number				
Tuberculosis of respiratory system .. .. .	2,851	2,731	1,598	625	395

Accidents and other external causes .. .. .	33.1	30.8	31.1	34.1	35.4
<b>All Causes .. .. .</b>	<b>1,451.0</b>	<b>1,447.0</b>	<b>1,297.4</b>	<b>1,207.4</b>	<b>1,197.6</b>

The death rate from tuberculosis (all forms) in the period 1960-1962 was only one-eighth of its level in the periods 1935-1937 and 1945-1947. Cancer deaths rose steadily over the years and the 1960-1962 rate showed an increase of 40 per cent on the rate for 1935-1937. A substantial increase in the death rate from diseases of the heart took place between 1935-1937 and 1945-1947, but since then, although the trend has been upward, relatively little change has occurred. Deaths from vascular lesions affecting the central nervous system have increased by nearly 70 per cent since 1935-1937 but in the case of diseases of the respiratory system the number of deaths in the 1960-1962 period was only half the number recorded in 1935-1937. In each period a large number of deaths were stated to be due simply to senility but a considerable reduction in the number has occurred over the years under review, the 1960-1962 deaths being only one-third of those in 1935-1937. This reduction is largely explained by an increasing accuracy in certification of cause of death, as well as a falling proportion of deaths not medically certified. The question of medical certification is discussed in a later section but it will be realised that the accuracy of the comparisons made in this table is somewhat reduced by the fact that many of the deaths are not medically certified.

The following table shows the age-sex specific death rates for the principal causes of death in the year 1962.

TABLE XIX

## AGE-SEX SPECIFIC DEATH RATES FOR THE PRINCIPAL CAUSES OF DEATH IN 1962

Of the total number of deaths registered in 1962 almost 70 per cent were due to four main causes, i.e. heart diseases, malignant neoplasms, vascular lesions affecting the central nervous system and respiratory diseases. Diseases of the heart were responsible for the largest proportion of all deaths, the death rates per 100,000 population being 455.4 in the case of males and 367.3 in the case of females. The great majority of deaths from heart diseases occurred at ages 55 and over, and more than 75 per cent were due to arteriosclerotic and degenerative heart disease. Malignant neoplasms were the next major cause of death, accounting for 190.2 male deaths and 156.4 female deaths in every 100,000 of their respective populations. Most of these deaths were in the age groups over 35 years and were caused chiefly by malignant neoplasms of the stomach, bronchus, trachea and lung, breast and genito-urinary organs. In almost every age group the deaths of males exceeded those of females. In the case of vascular lesions affecting the central nervous system the death rates were 127.6 for males and 157.8 for females per 100,000 corresponding population. As in the case of heart diseases, these deaths were confined mainly to the age groups 55 years and upwards and most of them were due to cerebral haemorrhage, cerebral embolism and thrombosis. Respiratory diseases caused 135.7 deaths in every 100,000 of the male population and 103.1 deaths per 100,000 of the female population. These deaths occurred mostly in the upper age groups and were due principally to pneumonia and bronchitis. It is noted, however, that pneumonia accounted for about one-eighth of the total number of deaths in the 0-4 age group. Other causes which contributed substantially to the deaths of children under five years of age were certain diseases of early infancy (birth injury, postnatal asphyxia and atelectasis, immaturity etc.) and congenital malformations. Between the ages 5 to 34 years accidents were the greatest single cause of death, whilst in the age group 35-44 nearly 50 per cent of the deaths were due to malignant neoplasms and heart diseases.

Diagram 3

DEATH RATE (PER 1,000 POPULATION) FROM TUBERCULOSIS & CANCER 1940-1962

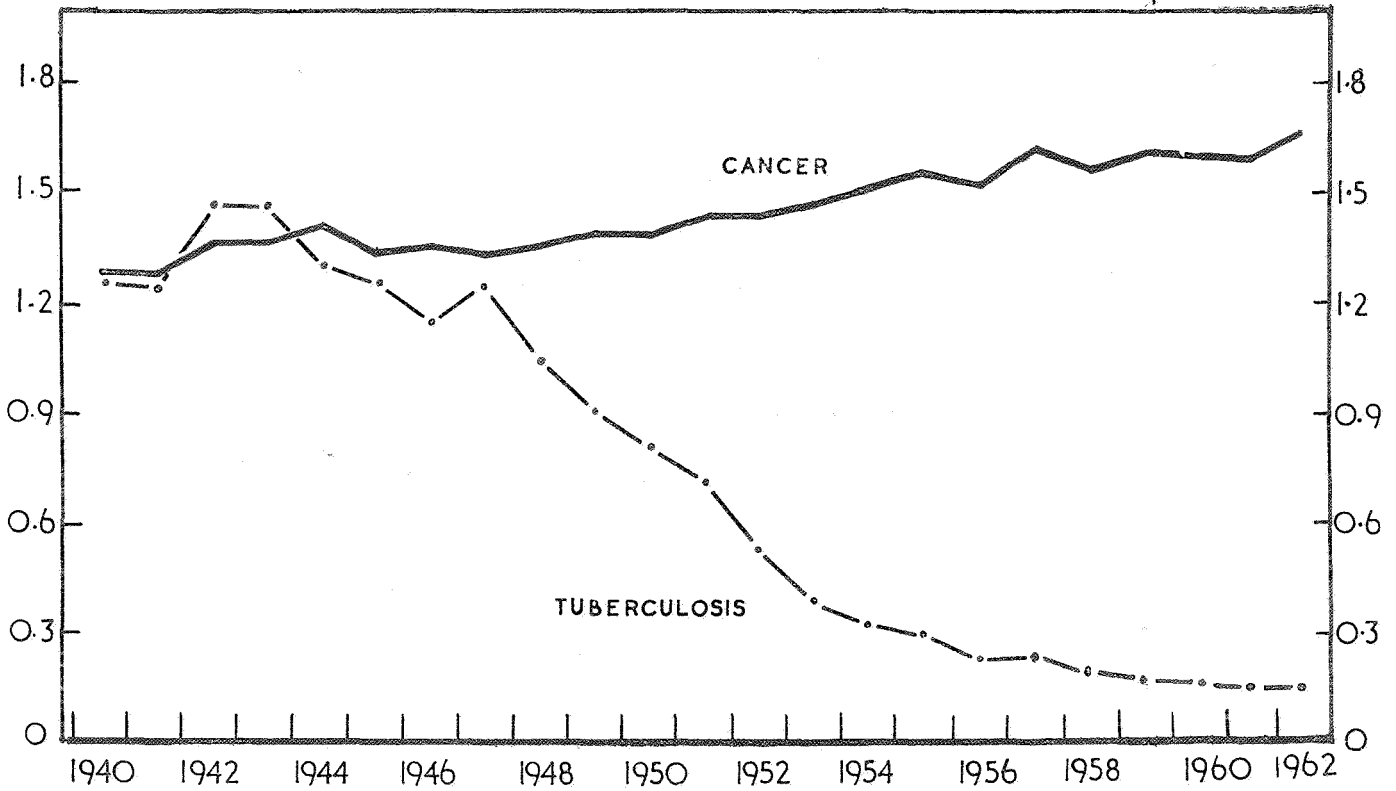

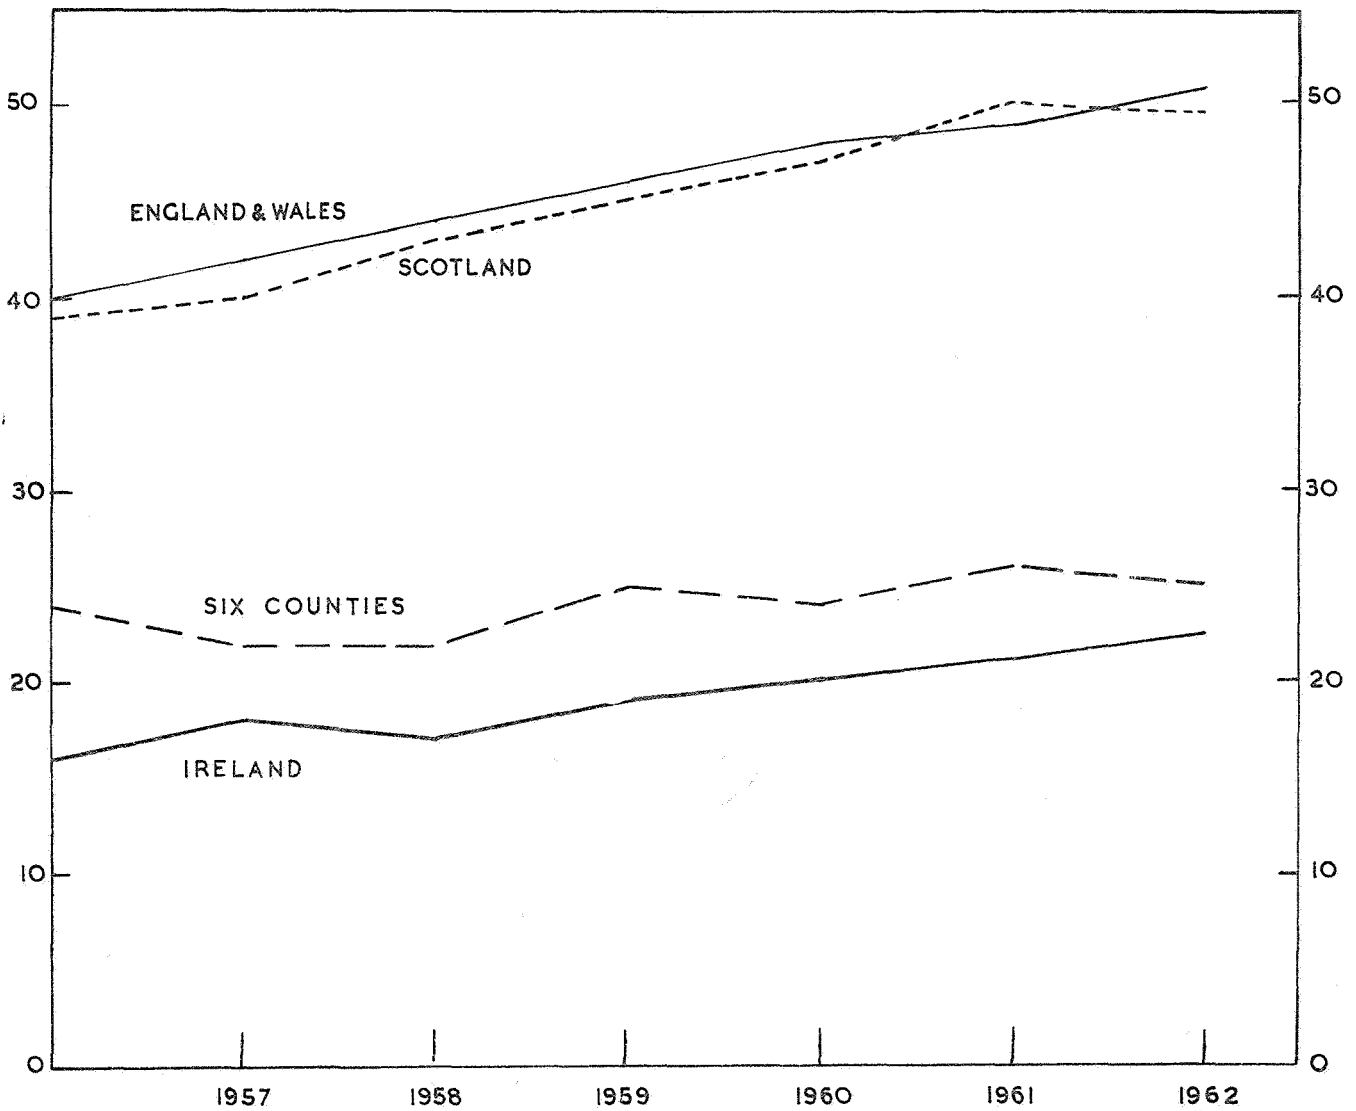

Diagram 4

DEATH RATES FROM LUNG CANCER (NºS 162-163) PER 100,000 POPULATION

Some of the principal causes of death are considered in greater detail in the following sections.

### Tuberculosis

Table XX shows the number of deaths and the death rates per 1,000 population for each of the years 1952 to 1962.

TABLE XX

NUMBERS OF DEATHS AND DEATH RATES PER 1,000 POPULATION FROM TUBERCULOSIS OF THE RESPIRATORY SYSTEM AND FROM ALL OTHER FORMS OF TUBERCULOSIS, 1952-1962

Year	Tuberculosis of the respiratory system		Other forms of tuberculosis		Ratio of male to female mortality	
	Number	Rate per 1,000 population	Number	Rate per 1,000 population	Tuberculosis of respiratory system	Other forms of tuberculosis
1952	1,207	0.41	372	0.13	1.45	1.27
1953	911	0.31	276	0.09	1.52	1.09
1954	797	0.27	208	0.07	1.59	0.93
1955	729	0.25	160	0.05	1.38	1.12
1956	562	0.19	127	0.04	1.81	1.31
1957	583	0.20	113	0.04	1.92	1.35
1958	502	0.18	79	0.03	1.80	1.93
1959	451	0.16	66	0.02	1.70	1.54
1960	416	0.15	52	0.02	1.81	1.00
1961	381	0.14	39	0.01	1.78	1.29
1962	387	0.14	39	0.01	2.15	1.29

In 1962 there were 426 deaths from tuberculosis, of which 387 were caused by the respiratory form and 39 by other forms of the disease. There has been a marked reduction in the number of deaths, both from tuberculosis of the respiratory system and other forms, in a comparatively recent period, the number of deaths in 1962 showing a fall of 73 per cent since 1952. The trend in the death rate from tuberculosis (all forms) since 1940 is shown in Diagram 3.

In Table XXI tuberculosis death rates are examined, by age groups, for a number of different periods.

TABLE XXI

AVERAGE ANNUAL DEATH RATES FROM ALL FORMS OF TUBERCULOSIS AT DIFFERENT AGES PER 1,000 CORRESPONDING POPULATION IN THE PERIODS 1935-37, 1945-47, 1955-57, AND 1960-62

Period	Under 15	15-19	20-24	25-34	35-44	45-54	55 and over	All ages
1935-37	0.53	1.36	2.25	2.18	1.63	1.32	0.71	1.22
1945-47	0.52	1.40	2.17	1.99	1.58	1.38	0.87	1.22
1955-57	0.07	0.06	0.16	0.29	0.34	0.41	0.51	0.26
1960-62	0.02	0.01	0.04	0.10	0.20	0.25	0.40	0.16

There was little change, either in the overall death rate or in the rates for individual age groups, between the periods 1935-37 and 1945-47. By 1955-57, however, the death rates in the younger age groups had declined considerably, and in the most recent years the rates for these groups were only a fraction of their level in 1945-47. Thus, between 1945-47 and 1960-62 the death rate in the age group under 15 years fell from 0.52 to 0.02 per 1,000 corresponding population and at ages 15-19 and 20-24 more striking declines occurred. In the older age groups the reduction in the death rate was less marked, the 1960-62 rate for the age group 55 years and over being 0.40 per 1,000 corresponding population compared with 0.87 in the period 1945-47.

The death rates from tuberculosis in the years 1952 to 1962 in this country are compared with those in the Six Counties, England and Wales and Scotland in Table XXII.

TABLE XXII

DEATHS PER 1,000 POPULATION FROM TUBERCULOSIS (ALL FORMS) IN IRELAND AND NEIGHBOURING COUNTRIES, 1952-1962

Year	Ireland*	Six Counties	England and Wales	Scotland
1952	0.54	0.30	0.24	0.32
1953	0.40	0.23	0.20	0.26
1954	0.34	0.18	0.18	0.22
1955	0.30	0.15	0.15	0.19
1956	0.24	0.12	0.12	0.16
1957	0.24	0.13	0.11	0.14
1958	0.20	0.11	0.10	0.13
1959	0.18	0.10	0.08	0.11
1960	0.17	0.08	0.07	0.10
1961	0.15	0.07	0.07	0.09
1962	0.15	0.07	0.07	0.08

\*Exclusive of the Six Counties

Throughout the period the death rate from tuberculosis has been higher in Ireland than in the neighbouring countries. A feature of this table, however, is the extent to which Ireland has shared in the general improvement.

The mortality from tuberculosis in the counties and county boroughs in 1962 is compared in TABLE 12 of this Report. The highest death rates from all forms per 1,000 population were in Waterford Co. Borough (0.35), Carlow County (0.27) and Wicklow County (0.26) whilst the lowest rates were in the counties Mayo (0.05), Sligo (0.06) and Tipperary S.R. (0.07).

### Cancer

Up to 1949 cancer deaths were those classified as Nos. 045 to 055 of the Fifth Revision of the International List of Causes of Death, while in the years 1950 to 1957, deaths were classified according to the Sixth Revision. The 1958 and subsequent Reports are based on the Seventh Revision of the International List. It has been recommended by the World Health Organisation that total cancer deaths should be based upon Nos. 140 to 205 of the International Statistical Classification, but that for comparability with years prior to 1950 Nos. 140 to 205, excluding Nos. 201 (Hodgkin's disease) and 204 (Leukaemia and aleukaemia) should also be shown.

In 1962 there were 4,897 deaths from cancer (Nos. 140 to 205). Of this number, 58 deaths were caused by Hodgkin's disease and 132 by leukaemia and aleukaemia.

Table XXIII shows the death rate from cancer in certain age groups in the years 1952 to 1962.

TABLE XXIII

DEATHS FROM CANCER (Nos. 140-205) CLASSIFIED BY SEX AND AGE PER 100,000 POPULATION AT THE SAME AGES, 1952 TO 1962

Year	Age group (years)							Total
	Under 25	25-34	35-44	45-54	55-64	65-74	75 and over	
Males								
1952	9	21	48	159	368	846	1,162	160
1953	8	20	54	169	406	808	1,188	164
1954	8	20	48	164	394	866	1,149	165
1955	8	22	42	164	428	910	1,310	176
1956	8	21	50	176	419	773	1,253	170
1957	8	15	47	178	440	853	1,233	177
1958	8	11	54	159	394	857	1,300	173
1959	7	23	56	154	431	875	1,396	182
1960	8	20	47	171	435	842	1,290	178
1961	9	20	50	162	437	865	1,374	183
1962	8	20	52	196	460	877	1,382	190
Females								
1952	5	18	75	183	340	568	755	135
1953	7	24	76	203	337	591	716	140
1954	6	19	61	196	367	644	810	147
1955	5	21	66	181	348	658	768	145
1956	6	19	68	188	349	609	846	145
1957	7	18	73	207	378	619	960	157
1958	5	16	73	190	363	629	977	155
1959	6	24	66	182	345	614	972	153
1960	7	13	60	189	375	664	908	158
1961	6	26	63	178	343	600	893	151
1962	6	17	74	195	343	630	929	156

In most of the age groups the death rate from cancer among males is appreciably higher than among females; in 1962 the male death rate for all ages was 22 per cent above that for females. Between the ages of 35 and 44 years the cancer death rates for males were below those for females but at other ages, particularly above 65 years, the excess of male deaths was very marked. The trend in the death rate from cancer since 1938 is shown in Diagram 3; for the reason given earlier, the figures plotted in this diagram exclude deaths from Hodgkin's disease and leukaemia and aleukaemia.

The death rates from cancer in Ireland and neighbouring countries in the years 1952 to 1962 are compared in Table XXIV.

TABLE XXIV

DEATHS FROM CANCER (Nos. 140-205) PER 1,000 POPULATION IN IRELAND AND NEIGHBOURING COUNTRIES, 1952 TO 1962

Year	Ireland*	Six Counties	England and Wales	Scotland
1952	1.48	1.53	1.99	1.98
1953	1.52	1.58	1.99	1.98
1954	1.56	1.54	2.03	2.05
1955	1.61	1.60	2.03	2.06
1956	1.58	1.63	2.08	2.09
1957	1.67	1.70	2.09	2.09
1958	1.64	1.67	2.12	2.10
1959	1.68	1.67	2.14	2.12
1960	1.68	1.62	2.16	2.12
1961	1.67	1.60	2.16	2.09
1962	1.73	1.54	2.18	2.21

\*Exclusive of the Six Counties

In the period under review the rates for England and Wales and Scotland were consistently higher than those for this country and the Six Counties.

The death rates from cancer in 1962 in counties and county boroughs are compared in Table XXV. Standardised rates, which eliminate the effect of different age distributions in the different areas, are also shown.

TABLE XXV

DEATH RATES FROM CANCER (Nos. 140-205) IN EACH COUNTY AND COUNTY BOROUGH (CRUDE AND STANDARDISED) IN 1962

Area	Rate per 1,000 population		Area	Rate per 1,000 population	
	Crude	Standardised		Crude	Standardised
Carlow .. ..	1.38	1.42	Clare .. ..	1.45	1.24

Cavan .. ..	2.01	1.71	Sligo .. ..	1.85	1.59
Donegal .. ..	1.79	1.55			
Monaghan .. ..	1.98	1.81	Connacht .. ..	1.63	1.40
Ulster (part of) .. ..	1.89	1.66	TOTAL .. ..	1.73	1.73

The crude death rate from cancer in 1962 varied from 2.20 per 1,000 population in Waterford County Borough to 1.10 in Dublin County (remainder). In certain areas, however, the standardised rates were considerably different from the crude rates and when comparing the relative seriousness of mortality in different counties it is, of course, the standardised rates which should be used. In the counties of the west

TABLE XXVI

## MORTALITY IN 1962 FROM MALIGNANT NEOPLASMS CLASSIFIED BY SITE, SEX AND AGE

1955 Inter- national List Nos.	Site	Males								Females							
		0-24	25-34	35-44	45-54	55-64	65-74	75 and over	All ages	0-24	25-34	35-44	45-54	55-64	65-74	75 and over	All ages

and north-west standardisation had the effect of lowering the death rates considerably. The standardised rates varied from 2.45 per 1,000 population in Waterford County Borough to 1.16 in Leitrim. The proportion of deaths not medically certified varies widely between the different areas, being very high (i.e. 12-19 per cent) in the counties of Leitrim, Mayo, Donegal and Kerry, and low (i.e., less than 2 per cent) in the County Boroughs, the Borough of Dun Laoghaire and in the counties of Carlow, Dublin, Kildare, Louth, Meath, Wexford and Wicklow. Thus, the possibility that some cancer deaths in the areas with low medical certification may escape detection should be borne in mind in comparing the death rates between counties.

Full details of deaths due to cancer registered in 1962, classified by site of the disease, and age group are contained in TABLE 19. The number of deaths and death rate from cancer per 100,000 in each age group for the main groups of sites are shown in Table XXVI and it will be observed that there is in general a rapid rise in the death rate with increasing age. Deaths due to malignant neoplasms of the digestive system represented almost half the total cancer deaths for each sex, the death rate being almost 21 per cent higher for males than for females. The death rate from malignant neoplasms of the respiratory system was over three times greater for males than for females. In the case of malignant neoplasms of the breast and genito-urinary organs the female death rate was double that of males.

#### Cancer of the bronchus, trachea and lung

The number of deaths and death rates from cancer of the bronchus, trachea and lung (Nos. 162 and 163) in each year 1957 to 1962, classified by sex and age group, are shown in Table XXVII.

TABLE XXVII

DEATHS AND DEATH RATES PER 100,000 CORRESPONDING POPULATION IN EACH YEAR 1957 TO 1962 FROM CANCER OF THE BRONCHUS, TRACHEA AND LUNG, (Nos. 162-163) CLASSIFIED BY SEX AND AGE GROUP

Year	Males						Females

1962 .. ..	0.6	9.6	56.8	132.3	136.0	35.0	0.3	3.5	17.4	32.8	37.4	10.1

The main point that emerges from this table is that deaths from cancer of the bronchus, trachea and lung are much more common among males than among females. In 1957 the death rate in the case of males was 26.8 compared with 9.3 in the case of females and by 1962 the disparity was even greater, the corresponding rates for that year being 35.0 and 10.1 respectively. In each of the years shown 75 to over 80 per cent of both male and female deaths occurred at ages 55 years and over, whilst the number of deaths in the age group under 35 years seldom exceeded 2 per cent of the total.

The following table shows deaths and death rates from cancer of the bronchus, trachea and lung (Nos. 162 and 163) in Ireland and the neighbouring countries during the years 1957 to 1962.

TABLE XXVIII

DEATHS AND DEATH RATES IN IRELAND AND THE NEIGHBOURING COUNTRIES FROM CANCER OF THE BRONCHUS, TRACHEA AND LUNG (Nos. 162 AND 163) IN EACH YEAR 1957 TO 1962

Area	1957	1958	1959	1960	1961	1962
	No. of deaths					
Ireland* .. .. .	523	485	527	567	604	639

Scotland .. .. .	2,081	2,226	2,330	2,422	2,475	2,596
England and Wales .. .. .	19,028	19,820	21,063	22,000	22,810	23,774
	Rates per 100,000 population					
Ireland* .. .. .	18	17	19	20	21	23
Six Counties .. .. .	22	22	25	24	26	25
Scotland .. .. .	40	43	45	47	50	50
England and Wales .. .. .	42	44	46	48	49	51

\*Exclusive of the Six Counties.

The most significant feature of this table is the low rate in Ireland in each year compared with those in the other areas. Throughout the period under review the yearly rates for England and Wales and Scotland were more than double the Irish rates, while the Six County rates exceeded those for this country by at least 20 per cent in every year up to 1961. In 1962, however, this excess fell to 9 per cent. Except for a few minor declines in the case of Ireland and the Six Counties there has been a steady all-over increase in deaths from lung cancer in the period. The trend in each area is illustrated in Diagram 4.

#### Diseases of the circulatory system

There were 12,958 deaths ascribed to diseases of the circulatory system (Nos. 400-468) registered in 1962, of which 7,147 were deaths of males and 5,811 deaths of females. Details of these deaths, classified by cause and age may be obtained from TABLE 19 of this Report while the numbers assigned to each county or county borough are shown in TABLE 20. Deaths and death rates from certain groups of causes are given in Table XXIX.

The excess of male over female deaths in the case of diseases of the circulatory system is largely accounted for by the greater number of deaths of males from coronary and arteriosclerotic heart disease (2,937 males compared with 1,602 females); in respect of the remaining groups of causes the difference between the male and female death rates is not nearly so pronounced. In interpreting Table XXIX it should be borne in mind that a number of deaths (mainly of elderly persons), stated to be due to heart diseases, are not medically certified. The numbers of uncertified deaths in the above groups are shown in Table XXX.

TABLE XXX

DEATHS FROM DISEASES OF THE CIRCULATORY SYSTEM REGISTERED IN 1962 SHOWING THE NUMBERS AND PERCENTAGES NOT MEDICALLY CERTIFIED

Cause of Death	Males			Females

A possible source of error is the large number of uncertified deaths ascribed simply to "senility." Thus, out of a total of 1,840 deaths (869 male, 971 female) stated to be due to senility, 835 (383 male, 452 female) were not medically certified. Of these uncertified deaths it is fair to suppose that a substantial proportion were caused by heart diseases.

#### Respiratory diseases

Deaths from respiratory diseases (Nos. 470-527 in the International List) in 1962 numbered 3,375. These included 318 deaths caused by influenza, 1,337 by pneumonia, 1,331 by bronchitis and 389 due to other respiratory diseases.

#### Pregnancy, childbirth and puerperium

The number of deaths in this group in 1962 was 27, the same as in 1961. The death rate was 0.44 per thousand births. Table XXXI shows the deaths in 1962 classified by age of mother and cause.

TABLE XXXI

MATERNAL DEATHS IN 1962 CLASSIFIED BY AGE OF MOTHER AND PRINCIPAL CAUSE

Table XXXII shows the maternal mortality rates in Ireland and neighbouring countries for the years 1952 to 1962.

TABLE XXXII

MATERNAL DEATHS PER 100,000 BIRTHS IN IRELAND AND NEIGHBOURING COUNTRIES, 1952-1962

Year	Number of deaths Ireland*	Deaths per 100,000 live births			
		Ireland*	Six Counties	England and Wales	Scotland
1952	92	142	108	74	102
1953	83	133	59	77	95
1954	69	110	73	71	76
1955	70	114	83	66	46
1956	52	86	58	57	54
1957	81	132	110	48	47
1958	61	103	53	44	54
1959	39	65	58	39	36
1960	35	58	44	39	34
1961	27	45	53	34	37
1962	27	44	25	36	40

\*Exclusive of the Six Counties.

The maternal mortality rates for Ireland and The Six Counties in 1962 were the lowest ever recorded, while those for England and Wales and Scotland showed increases over the 1961 figures. In each of the years 1952 to 1962 the highest rate was that of Ireland except in 1961 when it was exceeded by the rate for the Six Counties.

### Infant Mortality

During the year 1962 the deaths of 1,800 infants under one year of age were registered, compared with 1,827 in the previous year and 1,777 in 1960. The 1962 rate was 29.1 per 1,000 live births registered, compared with 30.5 in 1961 and 29.3 in 1960.

Table XXXIII shows the mortality rates at different ages under one year for the years 1947 to 1962.

TABLE XXXIII  
INFANT MORTALITY BY AGE, 1947 TO 1962

1962	6.9	8.1	2.0	1.3	0.7	19.0	2.6	1.8	3.7	2.1	10.1	29.1

\*Under one month prior to 1950.

Infant mortality has shown a considerable reduction since 1947 and the rate for 1962 (29.1 per 1,000 live births) was the lowest ever recorded. The greatest improvement has been in respect of mortality of infants over four weeks which showed a decline of 74 per cent in the period 1947-1962. The reduction in neo-natal mortality (i.e. at ages under four weeks) was less marked being only 34 per cent in that period. No significant changes occurred since 1947 in mortality at ages under 24 hours or between one day and one week. The trends in the infant and neo-natal mortality rates are illustrated in Diagram 5.

Diagram 5

### INFANT AND NEO-NATAL MORTALITY (PER 1,000 LIVE BIRTHS) 1940-1962

In Table XXXIV the infant mortality rates in Ireland and neighbouring countries are compared for the years 1951 to 1962.

TABLE XXXIV

## INFANT MORTALITY RATES IN IRELAND AND NEIGHBOURING COUNTRIES, 1951-1962

Period	Deaths of infants under 1 year per 1,000 live births

\*Exclusive of the Six Counties.

In each of the years shown the infant mortality rate in this country was the highest in the table, while that in England and Wales was the lowest. However, over the period 1951-1962 the percentage decrease in infant mortality has been greater in this country than in any of the other areas.

Table XXXV compares the neo-natal and infant mortality rates in the year 1962 for counties and county boroughs.

TABLE XXXV

## NEO-NATAL AND INFANT MORTALITY RATES FOR COUNTIES AND COUNTY BOROUGHS IN 1962

Area	Deaths of infants per 1,000 births			Area	Deaths of infants per 1,000 births		
	Under 28 days	28 days to 1 year	Under 1 year		Under 28 days	28 days to 1 year	Under 1 year
Carlow .. .. .	26	14	40	Clare .. .. .	21	10	30

Ulster (part of) .. .. .	21	13	34	Total .. .. .	19	10	29

NOTE—In some cases the figures in the first two columns do not tot to that in the third column on account of rounding.

In 1962 the infant mortality rates were highest in Counties Sligo, Carlow, Cavan and Limerick, and lowest in Counties Louth, Wexford, Meath and Cork. The neo-natal rate ranged from 9 per 1,000 births in Waterford County Borough to 34 per 1,000 births in County Sligo.

The causes of deaths of infants under one year, classified according to the Detailed International List are shown in TABLE 19. In TABLE 26 infant deaths are again classified by cause and a more detailed age classification shown. These results are summarised in Table XXXVI.

TABLE XXXVI

DEATHS OF INFANTS UNDER ONE YEAR REGISTERED IN 1962, CLASSIFIED BY CAUSE AND AGE

International List Nos.	Cause	Age				Total under 1 year
		Under 1 day	1 day to 1 week	1 week to 4 weeks	4 weeks to 1 year	
001-019	Tuberculosis, all forms .. .. .	.	.	.	3	3
340	Meningitis, except meningococcal and tuberculous ..	.	.	5	12	17

	<b>Total .. .. .</b>	<b>425</b>	<b>501</b>	<b>247</b>	<b>627</b>	<b>1,800</b>

It will be seen that the relative importance of the various groups of causes differs appreciably between deaths at ages under one week and deaths at ages 4 weeks to one year. At ages under one week 24 per cent of all deaths were ascribed to immaturity, while, as may be seen from TABLE 26, immaturity was a contributory factor to many deaths ascribed to other underlying causes. Postnatal asphyxia and atelectasis accounted for 20 per cent of deaths under one week, birth injuries for 16 per cent, and congenital malformations for 20 per cent. Eight per cent of the deaths under one week were assigned to the heading "Ill-defined diseases peculiar to early infancy" (No. 773 of the Detailed International List); deaths described by such terms as "asthenia", "athrepsia", "cachexia", "debility", "inanition", "marasmus", "cyanosis neonatorum", "hepatitis of newborn", or "sclerema neonatorum", and not otherwise specified are allocated to this heading. The majority of deaths due to haemolytic or haemorrhagic disease were at ages under one week. At ages over 4 weeks, congenital malformations were still an important cause of death, but only a small proportion of deaths were ascribed to immaturity or asphyxia. The majority of infant deaths from respiratory diseases and gastro-enteritis, occurred at ages over 4 weeks. Details of the 130 deaths ascribed to "other causes" may be obtained from TABLE 19. This figure includes 30 deaths from external causes (accidents etc.), 4 from neo-natal disorders arising from certain diseases of the mother during pregnancy, 6 from sepsis of the new-born, 13 from mental deficiency, 7 from diseases of the genito-urinary system and 5 from diseases of the thymus gland.

#### Accidents, poisoning and violence

The number of deaths from external causes (Nos. E800-999) registered in 1962 was 986, of which 639 were those of males and 347 those of females. The corresponding figures for 1961 were 998, 649 and 349 respectively. The excess of male mortality from these causes was very marked at all ages between 5 and 75 years. In the age groups between 10 and 45 years, in which male deaths from all causes outnumbered female deaths, it will be seen from TABLE 19 that the excess of male deaths was almost entirely due to the higher number of deaths from accidents. Table XXXVII shows the number of deaths from accidents, poisoning and violence in 1962 and previous years.

TABLE XXXVII

DEATHS FROM ACCIDENTS, POISONING AND VIOLENCE, 1951 TO 1962

Cause of death	1951	1952	1953	1954	1955	1956	1957	1958	1959	1960	1961	1962

	<b>Total deaths from accidents in the home M F</b>	<b>89 71</b>	<b>13 6</b>	<b>9 4</b>	<b>5 3</b>	<b>2 3</b>	<b>4 2</b>	<b>4 3</b>	<b>7 3</b>	<b>3 7</b>	<b>15 15</b>	<b>20 25</b>

Owing to the fact that many of the deaths caused by accidents, such as falls, are certified on medical certificates which do not indicate the place of occurrence, the figures in the above table probably do not cover all deaths due to accidents in the home. There were 160 deaths resulting from accidents in the home registered in 1962, compared with 108 in the previous year. Accidental falls accounted for 44 deaths, the majority of which were deaths of elderly persons. Accidents caused by fire, hot liquids etc. resulted in 48 deaths, of which 8 were of children under 5 years of age and 18 were of persons aged 75 years and over. Eighteen deaths of children under one year of age were due to inhalation and ingestion of food, causing obstruction or suffocation and to suffocation in bed and cradle. There were 30 deaths from poisoning, 15 of which were of persons aged 65 years and over.

**Uncertified deaths**

The number of cases in 1962 in which the cause of death was not certified by a medical practitioner was 1,598, which represents 4.7 per cent of the total deaths registered. In TABLE 23 uncertified deaths registered in 1962 are shown classified by county and age group, while the percentage of deaths uncertified in each county is also shown. The proportion of deaths uncertified is very high in the west and north-west regions of the country, being highest, in the year 1962, in the counties of Leitrim (18.9 per cent), Mayo (16.9 per cent), and Donegal (12.8 per cent).

Table XXXIX compares the percentages of deaths uncertified in each province for a number of years, and it will be observed that a steady improvement in the position is taking place.

**TABLE XXXIX**

UNCERTIFIED DEATHS AS A PERCENTAGE OF THE TOTAL REGISTERED IN EACH PROVINCE IN THE YEARS 1951 TO 1962

Province	1951	1952	1953	1954	1955	1956	1957	1958	1959	1960	1961	1962

Connacht .. ..	26.9	24.4	22.8	21.1	20.3	18.0	16.9	16.3	15.8	14.8	12.5	12.5
Ulster (part of) .. ..	18.6	16.2	15.7	16.0	14.7	13.6	10.8	11.0	10.3	8.1	7.9	7.9
<b>Total .. ..</b>	<b>12.2</b>	<b>10.6</b>	<b>9.8</b>	<b>9.2</b>	<b>8.8</b>	<b>7.7</b>	<b>7.1</b>	<b>6.6</b>	<b>6.1</b>	<b>5.6</b>	<b>4.9</b>	<b>4.7</b>

Table XL shows the percentage of deaths uncertified in 1962 by age group, in each province.

**TABLE XL**

PERCENTAGE OF DEATHS UNCERTIFIED, BY AGE GROUPS, IN EACH PROVINCE IN 1962

Province	All ages	Under 1 year	1-4	5-14	15-24	25-34	35-44	45-54	55-64	65-74	75 and over
Leinster .. ..	1.4	.	1.5	0.8	.	.	1.0	0.9	0.9	1.1	2.2
Munster .. ..	4.4	1.0	.	1.8	.	.	1.5	1.2	1.3	2.0	7.7
Connacht .. ..	12.5	2.5	5.9	3.1	2.2	.	.	4.2	2.5	4.2	20.1
Ulster (part of) .. ..	7.9	2.2	6.7	11.1	10.5	3.8	2.9	1.2	1.2	4.1	12.6
<b>Total .. ..</b>	<b>4.7</b>	<b>0.7</b>	<b>1.9</b>	<b>2.2</b>	<b>1.1</b>	<b>0.3</b>	<b>1.2</b>	<b>1.5</b>	<b>1.2</b>	<b>2.1</b>	<b>8.4</b>
Actual number of deaths uncertified .. ..	1,598	13	5	5	3	1	10	32	53	173	1,303

The proportion of deaths uncertified was highest in the age groups 65-74 years and 75 years and over, while only a very small number of young adult deaths were uncertified. In most age groups the provinces of Connacht and Ulster (part of) compare very unfavourably with Leinster and Munster in respect of the percentage of deaths uncertified.

**Inquests and post-mortems**

The number of deaths registered on certificates issued by coroners as the result of inquests and post-mortem examinations during 1962 was 1,593 compared with 1,623 in 1961 and 1,590 in 1960.

## **PART II—TABLES**

In the following tables births are classified according to the area of residence of the mother and deaths according to the area of residence of the deceased.

TABLE 1.—ESTIMATED POPULATION IN THOUSANDS AT THE MIDDLE OF EACH YEAR,\* 1851 TO 1962

Year	Persons	Males	Females	Year	Persons	Males	Females	Year	Persons	Males	Females

TABLE 7.—DEATHS FROM PRINCIPAL CAUSES IN IRELAND AND THE SIX COUNTIES, 1962, WITH RATES PER 100,000 POPULATION

NOTE.—The classification of cause of death in this table is based on the Abbreviated List, 1955.

Detailed List No.	Cause of death	Ireland*		Six Counties	
		Number	Rate	Number	Rate
	All causes ... ..	33,838	1,198.2	15,226	1,060.7
001-008	Tuberculosis of respiratory system ... ..	387	13.7	97	6.8
010-019	Tuberculosis, other forms ... ..	39	1.4	5	0.3
020-029	Syphilis and its sequelae ... ..	9	0.3	33	2.3
040	Typhoid fever ... ..	1	0.0	.	.
045-048	Dysentery, all forms ... ..	2	0.1	2	0.1
050-051	Scarlet fever and streptococcal sore throat ... ..	4	0.1	.	.
055	Diphtheria ... ..	1	0.0	.	.
056	Whooping cough ... ..	.	.	9	0.6
057	Meningococcal infections ... ..	5	0.2	5	0.3
080	Acute poliomyelitis ... ..	4	0.1	1	0.1
085	Measles ... ..	12	0.4	1	0.1
100-108	Typhus and other rickettsial diseases ... ..	.	.	.	.
110-117	Malaria ... ..	.	.	.	.
030-039, 041, 042, 044, 049, 052-054, 059-074, 081-083, 086-096, 120-138	All other diseases classified as infective and parasitic ... ..	82	2.9	35	2.4
140-205	Malignant neoplasms including neoplasms of lymphatic and haematopoietic tissues:				
140-205 (except 201 and 204)	(a) Cancer ... ..	4,707	166.7	2,216	154.4
201, 204	(b) Hodgkin's disease and leukaemia ... ..	190	6.7	95	6.6
210-239	Benign and unspecified neoplasms ... ..	118	4.2	39	2.7
260	Diabetes mellitus ... ..	249	8.8	89	6.2
290-293	Anaemias ... ..	149	5.3	61	4.2
330-334	Vascular lesions affecting central nervous system	4,027	142.6	2,203	153.5
340	Non-meningococcal meningitis ... ..	34	1.2	12	0.8
400-402	Rheumatic fever ... ..	8	0.3	15	1.0
410-416	Chronic rheumatic heart disease ... ..	294	10.4	169	11.8

\* Exclusive of the Six Counties.

TABLE 7.—(contd.)—DEATHS FROM PRINCIPAL CAUSES IN IRELAND AND THE SIX COUNTIES, 1962, WITH RATES PER 100,000 POPULATION

Detailed List No.	Cause of death	Ireland*		Six Counties	
		Number	Rate	Number	Rate
420-422	Arteriosclerotic and degenerative heart disease	9,141	323.7	4,694	327.0
430-434	Other diseases of heart ... ..	1,519	53.8	558	38.9
440-443	Hypertensive heart disease ... ..	668	23.7	344	24.0
444-447	Other hypertensive disease ... ..	354	12.5	113	7.9
480-483	Influenza ... ..	318	11.3	100	7.0
490-493	Pneumonia ... ..	1,337	47.3	546	38.0
500-502	Bronchitis ... ..	1,331	47.1	665	46.3
540-541	Ulcer of stomach and duodenum ... ..	238	8.4	104	7.2
550-553	Appendicitis ... ..	35	1.2	17	1.2
560, 561, 570	Intestinal obstruction and hernia ... ..	184	6.5	100	7.0
543, 571, 572	Gastritis, duodenitis, enteritis and colitis, except diarrhoea of newborn ... ..	132	4.7	78	5.4
581	Cirrhosis of liver ... ..	80	2.8	39	2.7
590-594	Nephritis and nephrosis ... ..	352	12.5	94	6.5
610	Hyperplasia of prostate ... ..	189	6.7	88	6.1
640-689	Deliveries and complications of pregnancy, child-birth and the puerperium ... ..	27	1.0	10	0.7
750-759	Congenital malformations ... ..	590	20.9	255	17.8
760-762	Birth injuries, post-natal asphyxia and atelectasis	360	12.7	186	13.0
763-768	Infections of newborn ... ..	126	4.5	29	2.0
769-776	Other diseases peculiar to early infancy and immaturity unqualified ... ..	406	14.4	222	15.5
780-795	Senility without mention of psychosis, ill-defined and unknown causes ... ..	2,260	80.0	95	6.6
	All other diseases ... ..	2,883	102.3	1,226	85.4
E810-E835	Motor vehicle accidents ... ..	274	9.7	151	10.5
E800-E802 E840-E962	All other accidents ... ..	648	22.9	355	24.7
E963, E970-E979	Suicide and self-inflicted injury ... ..	52	1.8	61	4.2
E964-E965, E980-E999	Homicide and operations of war ... ..	12	0.4	9	0.6

\* Exclusive of the Six Counties.

TABLE 19—(contd.)—DEATHS IN 1962, CLASSIFIED BY CAUSE (INTERNATIONAL

Detailed List Number	Cause of death		Age at								
			All ages	Under 1 year	1	2	3	4	Total under 5	5-9	10-14
147	Malignant neoplasm of hypopharynx	M	6	.	.	.	.	.	.	.	.
		F	6	.	.	.	.	.	.	.	.
148	Malignant neoplasm of pharynx, unspecified	M	27	.	.	.	.	.	.	.	.
		F	7	.	.	.	.	.	.	.	.
150	Malignant neoplasm of oesophagus	M	121	.	.	.	.	.	.	.	.
		F	67	.	.	.	.	.	.	.	.
151	Malignant neoplasm of stomach	M	512	.	.	.	.	.	.	.	.
		F	355	.	.	.	.	.	.	.	.
152	Malignant neoplasm of small intestine, including duodenum	M	4	.	.	.	.	.	.	.	.
		F	3	.	.	.	1	1	.	.	
153	Malignant neoplasm of large intestine, except rectum	M	227	.	.	.	.	.	.	.	.
		F	263	.	.	.	.	.	.	.	.
154	Malignant neoplasm of rectum	M	150	.	.	.	.	.	.	.	.
		F	88	.	.	.	.	.	.	.	.
155	Malignant neoplasm of biliary passages and of liver (stated to be primary site)	M	36	.	.	.	.	.	.	.	.
		F	46	.	.	.	.	.	.	.	.
156	Malignant neoplasm of liver (secondary and unspecified)	M	33	.	.	.	.	.	.	.	.
		F	52	.	.	.	.	.	.	.	.
157	Malignant neoplasm of pancreas	M	122	.	.	.	.	.	.	.	.
		F	112	.	.	.	.	.	.	.	.
158	Malignant neoplasm of peritoneum	M	9	.	.	.	.	.	.	.	.
		F	5	.	.	.	.	.	.	.	.
159	Malignant neoplasm of unspecified digestive organs	M	.	.	.	.	.	.	.	.	.
		F	1	.	.	.	.	.	.	.	.
160	Malignant neoplasm of nose, nasal cavities, middle ear, and accessory sinuses	M	6	.	.	.	.	.	.	.	.
		F	5	.	.	.	.	.	.	.	.
161	Malignant neoplasm of larynx	M	35	.	.	.	.	.	.	.	.
		F	18	.	.	.	.	.	.	.	.
162-0	Malignant neoplasm of trachea	M	1	.	.	.	.	.	.	.	.
		F	1	.	.	.	.	.	.	.	.
162-1	Malignant neoplasm of bronchus and lung, specified as primary	M	496	.	.	.	.	.	.	.	.
		F	141	.	.	.	.	.	.	.	.
164	Malignant neoplasm of mediastinum	M	2	.	.	.	.	.	.	.	.
		F	3	.	.	.	.	.	.	.	.
170	Malignant neoplasm of breast	M	3	.	.	.	.	.	.	.	.
		F	373	.	.	.	.	.	.	.	.
171	Malignant neoplasm of cervix uteri	F	41	.	.	.	.	.	.	.	
172	Malignant neoplasm of corpus uteri	F	9	.	.	.	.	.	.	.	
173	Malignant neoplasm of other parts of uterus, including chorionepithelioma	F	1	.	.	.	.	.	.	.	
174	Malignant neoplasm of uterus, unspecified	F	92	.	.	.	.	.	.	.	
175	Malignant neoplasm of ovary, Fallopian tube, and broad ligament	F	87	.	.	.	.	.	.	.	
176	Malignant neoplasm of other and unspecified female genital organs	F	14	.	.	.	.	.	.	.	
177	Malignant neoplasm of prostate	M	221	.	.	.	.	.	.	.	
178	Malignant neoplasm of testis	M	9	.	.	.	.	.	.	.
