REPORT ON VITAL STATISTICS FOR THE YEAR 1963

THIS Report has been prepared by the Central Statistics Office for the Minister for Health in accordance with the provisions of Section 2 of the Vital Statistics and Births, Deaths and Marriages Registration Act, 1952.

The statistics relate to the area in Ireland exclusive of the Six Counties.

Births have been assigned to the district containing the normal residence of the mother and deaths to the district containing the normal residence of the deceased. The number of births for each of the years 1943 to 1963 is exclusive of late registrations, and the number of deaths for each of the years 1940 to 1963 is exclusive of non-residents.

The important statistics contained in this Report have already been published, and the Report consists mainly of a breakdown and analysis of these statistics.

GENERAL SUMMARY

Marriages.—There were 15,556 marriages registered during the year 1963 compared with 15,627 in 1962. The marriage rate per 1,000 population was 5.48 compared with 5.53 in 1962.

Births.—The number of births registered during 1963 was 63,246 and the birth rate was 22.26 per 1,000 population, compared with 21.88 per 1,000 population in 1962. The number of illegitimate births registered in 1963 was 1,157 or 1.83 per cent of all births.

Deaths.—The number of deaths registered during 1963 was 33,795 and the death rate was 11.90 per 1,000 population. In 1962 deaths registered numbered 33,838 and the rate was 11.98.

Of the deaths registered in 1963, 31.94 per cent were stated to be due to heart diseases, 14.61 per cent to malignant neoplasms, 12.49 per cent to vascular lesions affecting the central nervous system and 1.28 per cent to tuberculosis (all forms).

The number of deaths in 1963 from tuberculosis of all forms was 432 and the rate was 0.15 per 1,000 population, which was the same as that for 1962.

There were 4,740 deaths from malignant neoplasms and neoplasms of lymphatic and haematopoietic tissues (excluding Hodgkin's disease and leukaemia and aleukaemia). This total is comparable with that for "cancer" in the 1949 and earlier Reports. The rate in 1963 was 1.67 per 1,000 population, the same as in 1962.

During 1963 the deaths of 1,682 infants under one year were registered, equivalent to a rate of 26.59 per 1,000 live births. In the previous year 1,800 deaths, equivalent to a rate of 29.13 per 1,000 live births, were registered.

The total number of deaths from accidents and other external causes in 1963 was 1,076, of which road vehicle accidents accounted for 322.

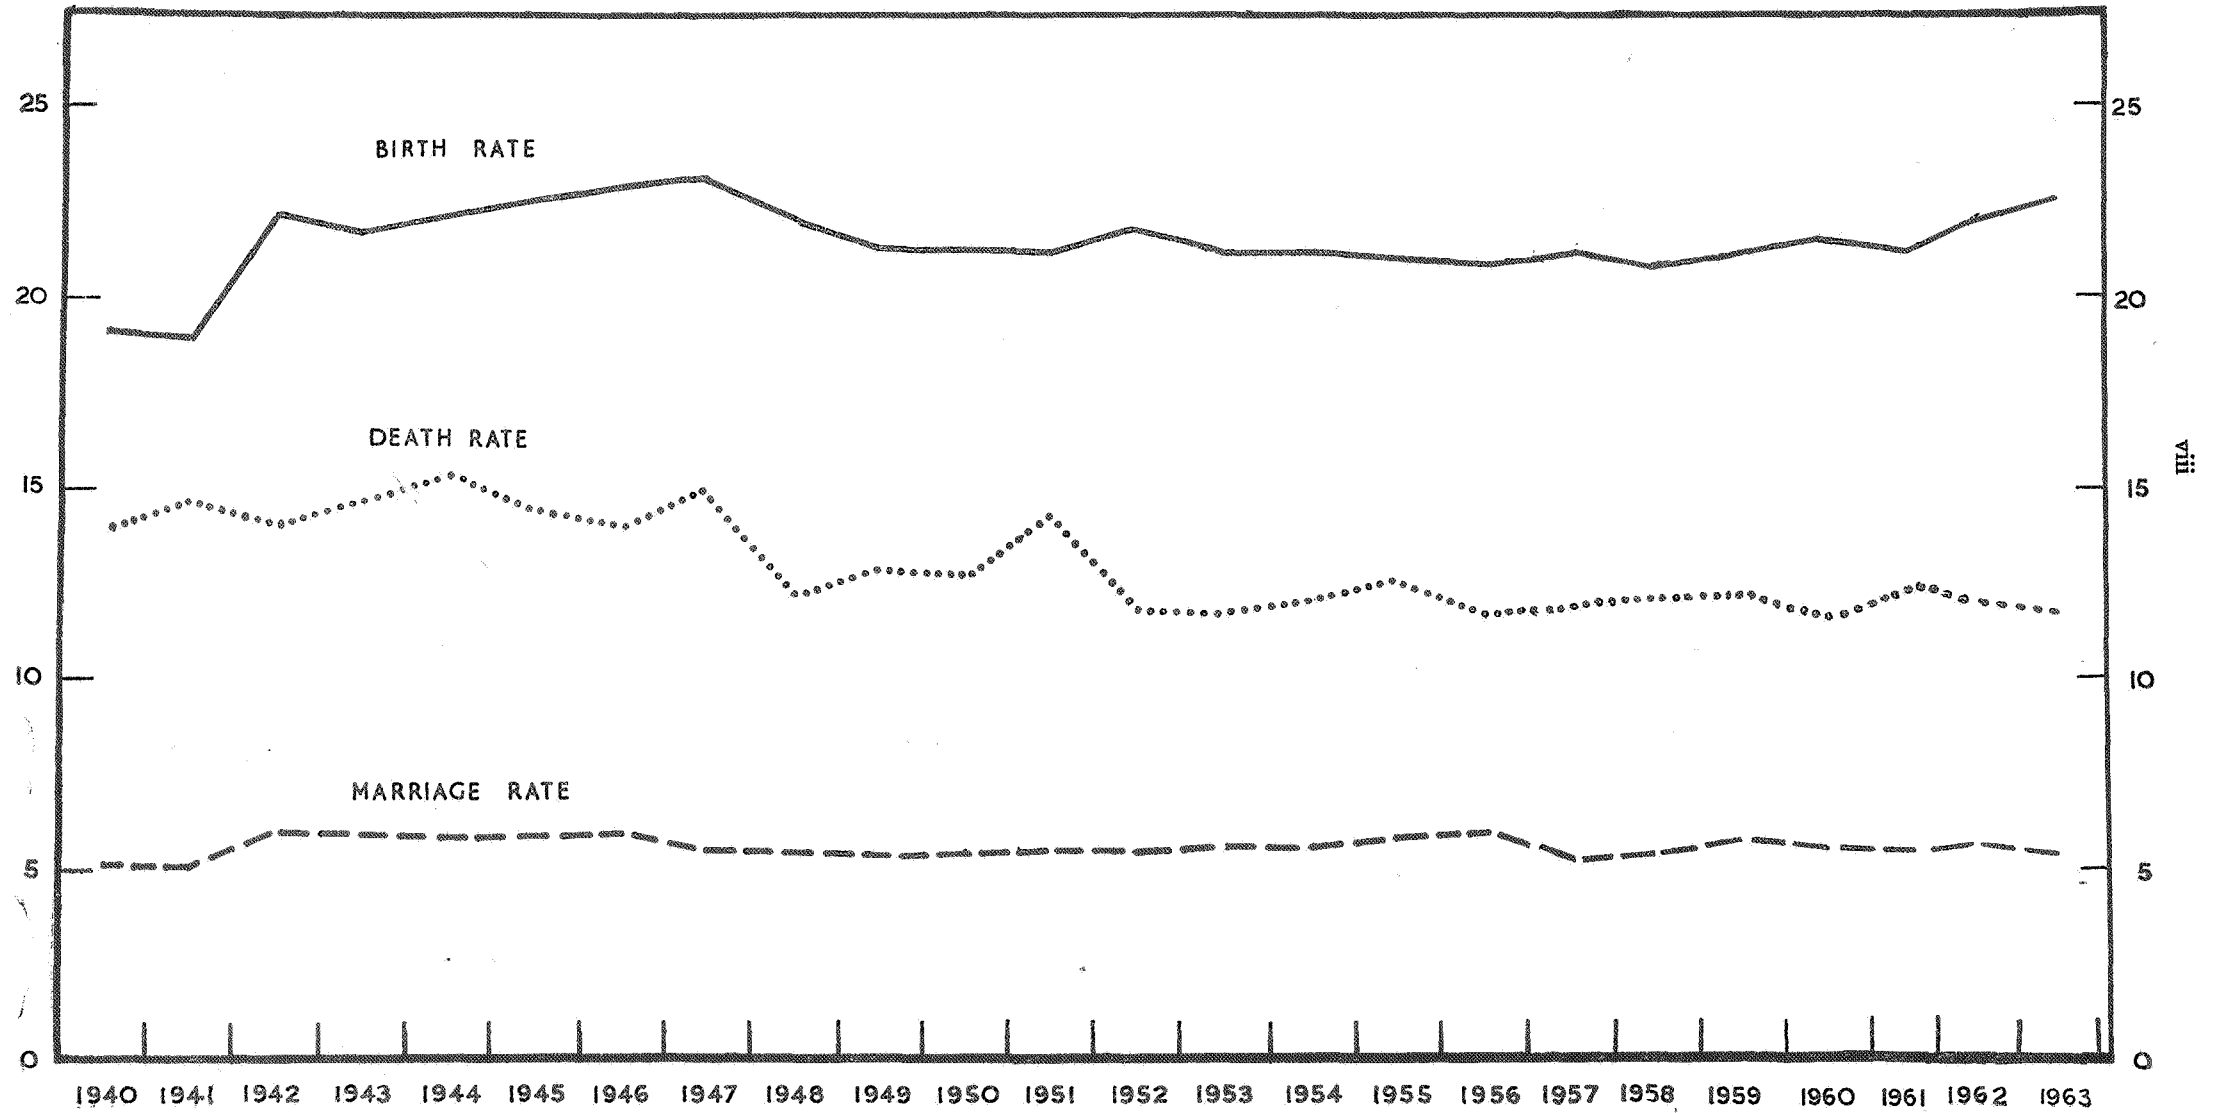

Marriage, birth and death rates per 1,000 population for the years 1940 to 1963 are illustrated in Diagram I.

Issue of Authority for Registration.—Births and deaths which have not been registered within one year of their occurrence can be registered only on the authority of An tArd-Chlaraitheóir. The number of births registered on the authority of An tArd-Chlaraitheóir in 1963 was 783 and the number of deaths registered was 194. Throughout the tables in this Report these births and deaths have been excluded.

Population.—The estimated population in April, 1963 was 2,841,000.

Diagram 1.

BIRTH, MARRIAGE AND DEATH RATES, (PER 1,000 POPULATION) 1940 — 1963

MARRIAGES

An alteration in the form of the marriage register was made in 1957 with a view to increasing the amount of statistical information available and bringing Irish statistics of marriages into conformity with international recommendations made by the United Nations Organisation. The column of the register headed "Age" was replaced by a column headed "Date of birth" with the result that, whereas up to 1956 the only entries made were "full age" or "minor", the exact age of persons married is now available. In addition a question is asked on "Intended future permanent residence", enabling an examination to be made of the numbers taking up residence in the different parts of the country or going abroad. The classifications of marriages prepared are shown in TABLES 38 to 55.

The number of marriages registered in 1963 was 15,556, and, although a decrease of 71 on the previous year, the rate at 5.5 per 1,000 population was the same. TABLES 4 and 5 of this Report show the average numbers of marriages registered and marriage rates for ten year periods since 1864 and by single years since 1951. The following table compares the marriage rate in Ireland in the years 1953 to 1963 with those in the Six Counties, England and Wales and Scotland.

TABLE I

NUMBER OF MARRIAGES PER 1,000 POPULATION IN IRELAND AND NEIGHBOURING COUNTRIES, 1953-1963

Year	Ireland*	Six Counties	England and Wales	Scotland
1953	5.4	6.8	7.8	8.0
1954	5.4	6.6	7.7	8.2
1955	5.6	6.8	8.1	8.5
1956	5.8	6.7	7.9	8.6
1957	5.1	6.7	7.7	8.3
1958	5.3	6.6	7.5	8.0
1959	5.4	6.8	7.5	7.8
1960	5.5	7.0	7.5	7.7
1961	5.4	6.9	7.5	7.8
1962	5.5	6.9	7.5	7.7
1963	5.5	7.0	7.5	7.6

*Exclusive of the Six Counties

From this Table it will be seen that the marriage rates in this country have remained fairly constant over the period 1953-1963, while in England and Wales and Scotland slight decreases have been recorded.

Age at marriage

Particulars of the ages of persons marrying in this country were obtained at the 1946 Census of Population. At that census persons were asked to state their date of marriage and a special analysis was made of 14,338 marriages which had taken place in the preceding twelve months and in the case of which the husband and wife were enumerated on the same census schedule. Corresponding data have been available since 1957 from marriage registrations and the results obtained from the 1963 marriage registrations make possible an examination of the trends in age at marriage over the intervening period, as may be seen from the following table.

TABLE II

PERCENTAGE DISTRIBUTION OF MARRIAGES ACCORDING TO AGE OF GROOM AND AGE OF BRIDE AND AVERAGE AGE AT MARRIAGE IN 1945-1946 AND IN EACH YEAR 1960 TO 1963.

Age group	Distribution according to age of groom					Distribution according to age of bride				
	1945-46	1960	1961	1962	1963	1945-46	1960	1961	1962	1963
Under 20 years ..	% 1.0	% 1.5	% 1.7	% 2.0	% 2.5	% 6.6	% 7.4	% 7.8	% 8.8	% 9.8
20 to 24 years ..	14.3	23.1	24.1	25.9	26.8	29.5	39.0	40.4	41.2	42.3
25 to 29 years ..	25.7	32.1	32.2	32.2	31.9	31.1	28.6	28.5	27.5	26.3
30 to 34 years ..	24.2	18.9	18.6	17.9	17.3	19.9	13.6	12.7	12.1	11.4
35 to 44 years ..	25.8	17.6	16.6	15.4	15.2	11.1	9.1	8.3	8.2	7.8
45 years and over	9.0	6.8	6.8	6.6	6.3	1.9	2.3	2.3	2.2	2.4
Total ..	100--	100--	100--	100--	100--	100--	100--	100--	100--	100--
Average age ..	33.1	30.9	30.6	30.3	30.1	28.0	27.1	26.9	26.6	26.5

Whereas, in 1945-46, 59 per cent of the men who married were aged 30 years and over the proportion over this age had fallen to 38.8 in 1963, the average age of men at marriage declining from 33.1 years in 1945-46 to 30.1 years in 1963. In 1945-46, 32.9 per cent of women marrying were aged 30 years and over, compared with 21.6 per cent in 1963, while the average age at marriage declined from 28.0 years in 1945-46 to 26.5 in 1963. In TABLE 39 the marriages registered in 1963 are shown cross-classified by age of groom and age of bride in single years while in TABLE 40 similar particulars are shown for marriages between bachelors and spinsters. From the latter table it may be calculated that the average ages of bachelors and spinsters marrying in 1963 were 29.3 and 25.9 respectively.

A comparison of marriage rates per 1,000 population by age groups in Ireland in 1963 and in England and Wales in 1962 is made in Table III. The figures for Ireland were obtained by dividing the number of males marrying in each group by the total number of single and widowed males in that age group and similarly for females. In obtaining the figures for England and Wales divorced persons were also included.

TABLE III

MARRIAGE RATES PER 1,000 CORRESPONDING POPULATION BY AGE GROUP IRELAND*, 1963 AND ENGLAND AND WALES, 1962

Age groups	Males		Females	
	Ireland* 1963	England and Wales, 1962	Ireland* 1963	England and Wales, 1962
15-19 years	3.1	12.8	13.3	58.4
20-24 years	49.4	157.8	94.4	268.3
25-29 years	99.2	191.1	122.0	190.1
30-34 years	73.4	109.6	76.8	107.8
35-39 years	48.9	73.1	41.5	60.1
40-44 years	30.3	45.9	17.2	38.2
45-49 years	16.4	36.9	7.7	24.8
50-54 years	9.4	33.9	3.5	14.7
55-59 years	6.3	25.8	1.8	8.2
60-64 years	2.5	25.0	0.8	5.8
65 years and over ..	1.0	9.3	0.2	1.3
Total, 15 years and over	29.5	66.3	30.0	51.2

*Exclusive of the Six Counties

For each sex and age group the marriage rates in Ireland were considerably below those in England and Wales. In the 15-19 age group the marriage rate in England and Wales was over four times that in Ireland in the case of both males and females. In the 20-24 age group the England and Wales rate for males was more than three times that in Ireland and, for females, almost three times the Irish rate.

Mode of celebration

The number of marriages celebrated in accordance with the rites and ceremonies of the Catholic Church registered in 1963 amounted to 14,888 (equal to 95.7 per cent of the total) and other marriages numbered 668, of which 430 were according to the rites and ceremonies of the Church of Ireland, 112 in Presbyterian Churches, 30 in Methodist Churches, 12 according to Jewish Rites, 6 in registered buildings belonging to other religious denominations and 78 by civil contract in Registrars' Offices.

The number of Catholic marriages recorded during 1963 corresponds to a rate of 5.52 per 1,000 of the Catholic population, being 0.07 below that for the preceding year. The rate for all other marriages in 1963 was 4.61 per 1,000 of all persons other than Catholics in the population, an increase of 0.12 on the corresponding rate for 1962. Details of marriages registered in each of the years 1953 to 1963 are given in Table IV.

TABLE IV

MARRIAGES REGISTERED IN THE YEARS 1953 TO 1963 ACCORDING TO THE MODE OF CELEBRATION, AND THE RATES PER 1,000 CORRESPONDING POPULATION FOR CATHOLIC AND ALL OTHER MARRIAGES

Year	Marriages registered other than Catholic							Catholic marriages registered	Total marriages registered	Rate per 1,000 estimated corresponding population

1961	375	92	17	.	34	39	557	14,772	15,329	5.53	3.84	5.44
1962	438	120	14	.	31	47	650	14,977	15,627	5.59	4.49	5.53
1963	430	112	12	.	36	78	668	14,888	15,556	5.52	4.61	5.48

Marriages are classified according to form of ceremony, age of groom and age of bride in TABLES 41 and 42. There was little difference between the various religious denominations in respect of average age at marriage in 1963. For Catholic marriages the average age of groom was 30.1 years, compared with 31.0 years for other marriages (including Civil marriages). The average age of bride for Catholic marriages was 26.5 years and, for other marriages, 26.7 years.

Social group

A classification which has been widely used in recent years in census of population statistics is that by Social Group. This classification, when applied to a person at work, is determined by his or her occupation, although status (i.e., whether the person is an employer, own-account worker or employee) is also taken into account. The social group of a person not at work is considered to be that of the gainfully occupied person on whom he or she is dependent. The men and women married in 1963 were classified by social group on the basis of the information as to occupation given in the marriage register, and the results obtained are given in TABLES 43 to 45.

TABLE 43 shows men classified by social group, age at marriage and the average age at marriage. The average age at marriage of 34.4 years in the "Farmers, relatives assisting and farm managers" social group was appreciably higher than in any of the other social groups, while the lowest average age of 28.1 years, occurred in the "Skilled manual workers" group. In the case of females the difficulty arises that since many are not gainfully occupied immediately before marriage information as to occupation is not given, with the result that in many cases the social code can not be assigned. The average age of women at marriage ranged from 31.7 years in the case of the employers and managers group to 24.0 years in the case of other manual workers, as may be seen from Table 44. The most striking feature of this table is the much lower average age in the case of the wage earner groups.

TABLE 45 shows marriages registered in 1963 cross-classified by the social groups of groom and bride. Of the women marrying men in the "Farmers, relatives assisting and farm managers" social group, in the case of whom occupation was stated, 29 per cent were in the same social group, 21 per cent in the "Lower professional" group and 40 per cent in the "Intermediate and other non-manual workers" groups, while there were small percentages in each of the other social groups. Of the women marrying men in the "Skilled manual worker" group 47 per cent were in the "Intermediate and other non-manual workers" groups, 29 per cent were other manual workers and 13 per cent were skilled manual workers, there being smaller percentages in each of the other groups. The distribution, by social group, of women marrying men in each of the remaining social groups may be considered in the same way. Alternatively the table may be examined by considering the social groups of the men marrying the women in each particular social group. Thus it will be seen that only 18 per cent of the women in the social group "Farmers, relatives assisting and farm managers" married men in social groups other than their own. A substantial number of women in the "Intermediate and other non-manual workers" groups married men in each of the other social groups. In the case of the majority of women in the "manual worker" groups the husbands belonged to the same groups.

Area of residence

Although the marriage registers in use prior to 1957 contained particulars of residence of bride and groom before marriage the difficulties of analysis by clerical methods prevented the summarisation of this information, hence only figures for marriages registered in each area were compiled. Following the alteration in the form of the marriage register in 1957 punched-card summarisation methods were introduced, with the result that four districts may now be considered in relation to each marriage, namely that in which the marriage took place, the areas of residence of the bride and groom prior to marriage, and the intended future residence. In TABLE 38 figures for marriages according to place of occurrence are given for 1963 in the same form as in earlier Reports in this series. A comparison between the area of residence of the bride before the ceremony and the area in which the marriage took place is made for 1963 in Table V.

TABLE V

COMPARISON OF AREA IN WHICH MARRIAGE TOOK PLACE WITH AREA OF RESIDENCE OF BRIDE, 1963

Area in which registered (1)	Total Marriages (2)	Marriages in the case of which bride was resident in		Col. (3) as percentage of col. (2) (5)
		Same area (3)	Other areas* (4)	
Carlow	160	132	28	82.5
Dublin County Borough	4,826	3,952	874	81.9

Donegal	576	477	99	82.8
Monaghan	238	202	36	84.9
Total	15,556	12,577	2,979	80.8

*Includes cases in which area of residence of bride was not stated.

In TABLES 46 and 47 marriages are shown classified by area of residence prior to marriage and age group of groom and bride. Confining attention to the marriages in the case of which the area of residence was within the State, it will be seen that the average age at marriage is appreciably lower in predominantly urban than in rural areas. Thus in the four county boroughs the average age of groom was under 29 years, whereas in the counties Longford, Mayo, Leitrim, Roscommon, and Cavan the average age was over 33 years. The average age of brides was under 26 years in the four county boroughs. The lowest average age was in County Kildare (24.6) and the highest in County Cavan (28.6).

TABLE 48 shows marriages cross-classified by area of residence before marriage of groom and bride. As is to be expected, in the great majority of cases the groom and bride were from the same or neighbouring counties. A feature of the table is the large number of cases in which the address of the groom or bride or both groom and bride was outside the State. Thus 1,090 of the men married in the State in 1963 were returned as residing in England, Wales or Scotland, 268 in the Six Counties and 116 in other countries. The number of brides who were resident before marriage in England, Wales or Scotland was 635, the number from the Six Counties was 132 and the number from other countries was 44. In 686 cases both the groom and bride were from outside the State. In the past it has been the practice to compute marriage rates for counties and county boroughs by relating the marriages registered in each area to the resident population of that area. In Table VI the rates calculated in this way are compared with rates obtained by relating marriages classified by area of residence of groom before marriage to total resident population.

TABLE VI

MARRIAGE RATES PER 1,000 POPULATION OF EACH COUNTY AND COUNTY BOROUGH CALCULATED USING (a) TOTAL MARRIAGES REGISTERED IN EACH AREA AND (b) MARRIAGES OF MEN FROM THAT AREA IN 1963.

Area	Rate (a)	Rate (b)	Area	Rate (a)	Rate (b)
Carlow	4.7	5.0	Clare	3.8	3.9
Dublin County Borough ..	8.8	7.0	Cork County Borough ..	9.8	7.0
Dun Laoghaire Borough ..	7.3	5.9	Cork County	4.1	4.4
Dublin County (remainder) ..	4.0	4.3	Kerry	3.2	3.0
Kildare	4.8	5.5	Limerick County Borough ..	10.1	5.4
Kilkenny	4.2	4.2	Limerick County	3.1	4.4
Laois	4.0	4.7	Tipperary N.R.	4.2	4.6
Longford	3.4	3.5	Tipperary S.R.	4.0	4.0
Louth	6.1	5.9	Waterford County Borough ..	6.7	6.1
Meath	4.6	5.0	Waterford County	5.3	4.7
Offaly	4.8	4.8			
Westmeath	5.2	4.5	Munster	4.9	4.5
Wexford	4.7	4.9			
Wicklow	6.0	5.2	Galway	4.5	4.1
Leinster	6.5	5.7	Leitrim	3.5	3.6
			Mayo	3.1	3.2
Cavan	4.2	3.7	Roscommon	3.2	3.3
Donegal	5.1	4.0	Sligo	4.0	3.9
Monaghan	5.2	3.8	Connacht	3.8	3.7
Ulster (part of)	4.9	3.9	Total	5.5	4.9

It will be observed that the total rates (a) and (b) differ on account of the fact that marriages of men whose area of residence was outside the country were included in the calculation of rate (a) and excluded from rate (b). The main difference between rates (a) and (b) is in the much lower figures for the county boroughs. In the case of the question on intended future permanent residence the accuracy of many of the entries was not as high as for the other information supplied. There were 506 marriages registered in which no information on future residence was provided. Nevertheless the answers to this question revealed that, in a very high proportion of cases, the intended future residence was outside the State. Out of the total of 15,556 marriages registered in 1963 there were 1,949 or 12 per cent where the intended future residence was outside the State. These cases are examined in some detail in TABLES 49 to 55. In the case of 1,388 marriages the future residence was in England and Wales, 253 in the Six Counties, 63 in Scotland, 34 in other parts of Europe, 136 in the United States of America, 18 in Canada, 11 in Australia and New Zealand and 46 elsewhere. The age distributions and average ages of the grooms and brides going to the various countries are shown in TABLES 49 and 50 respectively. It will be seen that the average ages of the men and women marrying and then going abroad were appreciably below those

for all marriages in the State. The marriages of persons going abroad are shown classified by social groups of groom and bride in TABLES 51 and 52 respectively. By comparing TABLES 43 and 51 it is possible to examine the proportions of men marrying in each social group who intended to reside outside the country, and it is found that this proportion varied considerably between the different groups. Table VII contains the results obtained.

TABLE VII

PERCENTAGE OF MEN MARRYING IN EACH SOCIAL GROUP WHOSE INTENDED FUTURE RESIDENCE WAS OUTSIDE THE STATE IN 1962 AND 1963

Social group of groom	Percentage with intended future residence outside the State	
	1962	1963
Farmers, relatives assisting and farm managers ..	% 2	% 3
Other agricultural occupations and fishermen ..	3	5
Higher professionals	32	30
Lower professionals	19	19
Employers and managers (including shopkeepers) ..	10	9
Salaried employees	15	16
Intermediate non-manual workers	14	16
Other non-manual workers	15	14
Skilled manual workers	18	16
Semi-skilled manual workers	16	11
Unskilled manual workers	15	13
Total, all groups combined ..	13	13

A classification of marriages of persons going abroad, by form of marriage ceremony, is made in TABLE 53. By comparison with TABLE 38, it will be seen that the proportions that these represent of all marriages in the State are as shown in the following table :—

TABLE VIII

PERCENTAGE OF MARRIAGES OF EACH DENOMINATION IN THE CASE OF WHICH THE FUTURE RESIDENCE WAS OUTSIDE THE STATE IN 1962 AND 1963

Form of ceremony	Percentage with intended future residence outside the State	
	1962	1963
Catholic	% 12	% 12
Church of Ireland	27	28
Presbyterian	39	37
Methodist	21*	30*
Jewish	50*	33*
Civil marriage	23*	35*
Total	13	13

*Percentages based on small numbers.

Finally, in TABLES 54 and 55 the marriages in the case of which the intended future residence was outside the State are shown classified by area of residence before marriage of groom and bride. The proportions which these marriages represent of the total when classified according to area of residence of groom are shown in Table IX.

TABLE IX

PERCENTAGE OF MARRIAGES IN 1962 AND 1963, IN THE CASE OF WHICH THE INTENDED FUTURE RESIDENCE WAS OUTSIDE THE STATE, ACCORDING TO AREA OF RESIDENCE OF GROOM BEFORE MARRIAGE

Area of residence of groom before marriage	Percentage with intended future residence outside the State	
	1962	1963
Dublin County Borough and Dun Laoghaire Borough	% 6	% 6
Remainder of Leinster	5	4
Munster	3	3
Connacht	4	4
Ulster (part of)	8	7
Outside the State	91	90

BIRTHS

Under a system for the collection of statistics of births introduced in 1955 a considerable volume of information dealing with such matters as age of mother at maternity, parity of birth and duration of marriage has become available. These statistics in respect of births registered in 1963 are presented in TABLES 30 to 37.

The number of births registered during the year 1963 was 63,246, the males numbering 32,486 and the females 30,760. Births registered in 1962 numbered 61,782 and in 1961, 59,825. The birth rate in 1963 was 22.3 per 1,000 population, compared with 21.9 in 1962 and 21.2 in 1961.

Table X compares the birth rates in Ireland in the years 1953 to 1963 with those in the Six Counties, England and Wales and Scotland.

TABLE X

NUMBERS OF BIRTHS IN IRELAND* AND BIRTH RATES PER 1,000 POPULATION IN IRELAND AND NEIGHBOURING COUNTRIES, 1953-1963

Year	Numbers of births (in thousands) Ireland*	Birth rate per 1,000 population			
		Ireland*	Six Counties	England and Wales	Scotland
1953	62.6	21.2	20.9	15.5	17.8
1954	62.5	21.3	20.8	15.2	18.1
1955	61.6	21.1	20.8	15.0	18.1
1956	60.7	21.0	21.1	15.6	18.6
1957	61.2	21.2	21.5	16.1	19.1
1958	59.5	20.9	21.6	16.4	19.4
1959	60.2	21.1	21.9	16.4	19.2
1960	60.7	21.5	22.6	17.1	19.6
1961	59.8	21.2	22.4	17.5	19.5
1962	61.8	21.9	22.7	17.9	20.1
1963	63.2	22.3	23.1	18.2	19.7

*Exclusive of the Six Counties.

In the years 1953 to 1955 the birth rates for this country were higher than those for the other areas but, from 1956 onwards, the Six County rates were the highest. The 1963 rates showed small increases over those for 1962 in all areas except Scotland, where a slight reduction was recorded.

Classification by age at maternity, parity and duration of marriage

In TABLE 34 is shown the total number of births registered in 1963, classified by age of mother at maternity and number of previous liveborn children. The number of births in the case of which the mother's age was not stated was 534 or 0.8 per cent of the total, and the number where the parity was not stated was 469 or 0.7 per cent of the total. The results contained in TABLE 34 are summarised in Table XI.

TABLE XI

BIRTHS REGISTERED IN 1963 CLASSIFIED BY AGE OF MOTHER AT MATERNITY AND NUMBER OF PREVIOUS CHILDREN

Age at maternity	Number of previous children									
	Total	0	1	2	3	4	5 to 9	10 to 14	15 and over	Not stated
Under 20 years ..	1,440	1,181	190	53	8	3	.	.	.	5
20-24 years ..	9,869	5,009	2,708	1,324	556	182	80	.	.	10
25-29 years ..	16,749	4,861	4,437	3,502	2,028	1,177	1,212	15	.	17
30-34 years ..	16,758	2,142	2,640	3,316	2,852	2,154	3,391	228	5	30
35-39 years ..	12,571	915	1,115	1,621	1,892	1,826	4,423	720	43	16
40-44 years ..	5,033	206	247	431	569	676	2,248	594	55	7
45 years and over ..	292	11	10	12	20	29	148	53	9	.
Not stated ..	534	62	14	15	16	13	21	9	.	334
Total ..	63,246	13,887	11,361	10,274	7,941	6,060	11,523	1,619	112	469

In preparing this table the procedure in the case of multiple births was to count each child as an individual birth. For instance if a fifth pregnancy produced twins the children would be classified as a fifth and sixth child in parity order.

There was little change from 1962 to 1963 in the distribution of births according to age of mother at maternity, as may be seen from Table XII in the calculation of which only those births where the age was stated are, of course, included. This table also illustrates the striking difference between this country and England and Wales and Scotland in respect of the distribution ages of mothers at maternity.

TABLE XII

PERCENTAGE DISTRIBUTION OF BIRTHS ACCORDING TO AGE OF MOTHER AT MATERNITY IN IRELAND* IN 1962 AND 1963, AND IN ENGLAND AND WALES AND SCOTLAND IN 1962

Age at maternity	Ireland*		England and Wales (1962)	Scotland (1962)
	1963	1962		
Under 20 years ..	% 2.3	% 2.1	% 3.0	% 6.8
20-24 years ..	15.7	14.8	31.1	31.4
25-29 years ..	26.7	26.6	30.6	30.9
30-34 years ..	26.7	26.6	18.4	18.6
35-39 years ..	20.1	21.1	9.1	9.4
40-44 years ..	8.0	8.2	2.7	2.7
45 years and over ..	0.5	0.6	0.1	0.2
Total ..	100-	100-	100-	100-
Average age at maternity	31.1	31.3	27.4	27.6

*Exclusive of the Six Counties.

The difference between this country and England and Wales and Scotland shown by Table XII is due to the facts that (a) women in Ireland marry at a later age and (b) married women in Ireland have on the average a larger number of children and so continue bearing children for a greater number of years. When attention is confined to legitimate first births, in order to eliminate the effect of factor (b), the difference remains very pronounced (as may be seen from the Report for the year 1955 in this series).

Fertility rates in Ireland in 1963 and in England and Wales in 1962 are compared in Table XIII.

TABLE XIII

BIRTHS PER 1,000 WOMEN IN EACH AGE GROUP, IRELAND*, 1963 AND ENGLAND AND WALES, 1962

Age of mother at maternity	Legitimate and illegitimate births (all women)		Legitimate births per 1,000 married women		Illegitimate births per 1,000 single, widowed and divorced women	
	Ireland* 1963	England and Wales 1962	Ireland* 1963	England and Wales 1962	Ireland* 1963	England and Wales 1962
15-19 years ..	12.4	39.3	825.3	459.9	3.3	8.7
20-24 years ..	110.8	179.1	488.3	281.5	5.9	30.2
25-29 years ..	226.3	181.7	409.8	204.2	4.9	51.7
30-34 years ..	220.3	104.6	314.3	111.2	3.8	45.6
35-39 years ..	154.5	48.3	205.5	51.2	2.1	24.5
40-44 years ..	59.3	14.1	79.1	15.0	1.1	7.9
45-49 years ..	3.4	0.8	4.8	0.9	—	0.5
Total, 15-49 years	103.5	77.4	205.8	102.4	3.6	17.4

*Exclusive of the Six Counties.

In each age group the number of legitimate births per 1,000 married women was considerably higher in Ireland than in England and Wales. In the 15-19 year group the Irish rate was 79 per cent above that in England and Wales, in the 20-24 year group 73 per cent greater, while the excess in the Irish rate rose steadily with increasing age. The number of illegitimate births per 1,000 single, widowed or divorced women was appreciably lower at all ages in Ireland than in England and Wales. On account of the much higher proportion of women married at the younger ages in England and Wales the fertility rates for all women combined were higher in England and Wales than in Ireland in the 15-19 and 20-4 year groups, but at the later ages the Irish rate was considerably higher.

The percentage distribution of births according to the number of previous children in 1962 and 1963 is shown in Table XIV and a comparison made with the corresponding distributions in England and Wales and Scotland in 1962.

TABLE XIV

PERCENTAGE DISTRIBUTION OF BIRTHS ACCORDING TO NUMBER OF PREVIOUS CHILDREN IN IRELAND* IN 1962 AND 1963 AND IN ENGLAND AND WALES AND SCOTLAND IN 1962

Number of previous children	Ireland*		England and Wales (1962)	Scotland (1962)
	1963	1962		
0	22.1	21.7	36.9	33.9
1	18.1	18.0	30.6	28.4
2	16.4	16.2	16.4	18.0
3	12.6	12.6	7.9	9.3
4	9.6	9.7	3.8	4.8
5 to 9	18.4	19.0	4.2	5.4
10 to 14	2.6	2.6	0.2	0.2
15 and over	0.2	0.2	0.0	0.0
Total	100.0	100.0	100.0	100.0

*Exclusive of the Six Counties.

The difference between the years 1962 and 1963 in respect of the percentage distribution according to number of previous children was very slight. The percentage of women with large families was considerably higher in Ireland than in England and Wales or Scotland. Thus, in Ireland in 1962, 19.0 per cent of the mothers had 5 to 9 previous children, the corresponding percentages being only 4.2 in England and Wales and 5.4 in Scotland.

Births by date of occurrence

In TABLE 37 details of the number of births which occurred on each day during 1963 are set out.

Table XV shows the number of children born in each month in 1963, classified according to the year in which the births were registered. The average daily number of births and the percentage ratio of males to females in each month are also included in the table.

TABLE XV

BIRTHS BY MONTH OF OCCURRENCE IN 1963, CLASSIFIED ACCORDING TO YEAR OF REGISTRATION, AVERAGE DAILY NUMBER OF BIRTHS AND PERCENTAGE RATIO OF MALES TO FEMALES

Month of occurrence	Total No. of births	No. registered during 1963	No. registered during 1964	Average daily no. of births	Ratio of males to females
January, 1963 ..	4,980	4,978	2	161	108.4
February,	4,675	4,667	8	167	112.5
March,	5,603	5,597	6	181	107.2
April,	5,645	5,633	12	188	101.6
May,	5,932	5,922	10	191	106.4
June,	5,443	5,431	12	181	103.6
July,	5,651	5,640	11	182	105.2
August,	5,445	5,419	26	176	106.3
September,	5,011	4,990	21	167	102.9
October,	5,066	5,005	61	163	104.9
November,	4,596	4,360	236	153	102.0
December,	4,786	2,763	2,023	154	106.4
Total	62,833	60,405	2,428	172	105.5

Of the 62,833 births which took place in 1963, 32,263 were males and 30,570 were females. The number of births occurring in 1963 which were not registered until 1964 amounted to 2,428, but 83 per cent of these registrations were in respect of children born in the month of December, 1963.

The average number of children born daily throughout 1963 was 172 and ranged from 153 in November to 191 in May. During 1963 the over-all ratio of male to female births was 105.5 to 100.

Multiple births

The number of infants born alive in multiple births registered in 1963 was 1,953, consisting of 960 pairs of twins, and 11 sets of triplets.

DEATHS

The number of deaths registered during the year 1963 was 33,795 of which 18,199 were those of males and 15,596 those of females. This is equivalent to a rate of 11.90 deaths per 1,000 total population, compared with 11.98 in the previous year and 12.33 in 1961.

In Table 9 are shown the average annual death rates, by age group, for decennial periods from 1864 to 1960 and the death rates for each year from 1961 to 1963.

While the crude death rate per 1,000 population has shown a gradual downward trend since the beginning of the century, striking falls have occurred in the death rates at the younger ages. In the age groups above 65 years little change has occurred in the death rates since the period 1901-1910.

Table XVI compares the death rates in the years 1952-1963 with those in the Six Counties, England and Wales and Scotland. In general the death rate in this country is somewhat higher than in England and Wales and the Six Counties and of about the same order as the Scottish rate. In 1963 this country's rate showed a decrease from the 1962 figure but in all the other areas increases were recorded.

TABLE XVI
DEATH RATES PER 1,000 POPULATION IN IRELAND AND NEIGHBOURING COUNTRIES, 1952-1963

Year	Numbers of deaths (thousands) Ireland*	Death rate per 1,000 population			
		Ireland*	Six Counties	England and Wales	Scotland
1952 ..	35.1	11.9	10.8	11.3	12.1
1953 ..	34.6	11.7	10.7	11.4	11.5
1954 ..	35.5	12.1	10.9	11.3	12.0
1955 ..	36.8	12.6	11.1	11.7	12.1
1956 ..	33.9	11.7	10.6	11.7	12.1
1957 ..	34.3	11.9	10.9	11.5	11.9
1958 ..	34.2	12.0	10.8	11.7	12.1
1959 ..	34.2	12.0	10.9	11.6	12.2
1960 ..	32.7	11.5	10.8	11.5	11.9
1961 ..	34.8	12.3	11.3	12.0	12.3
1962 ..	33.8	12.0	10.6	11.9	12.2
1963 ..	33.8	11.9	11.0	12.2	12.6

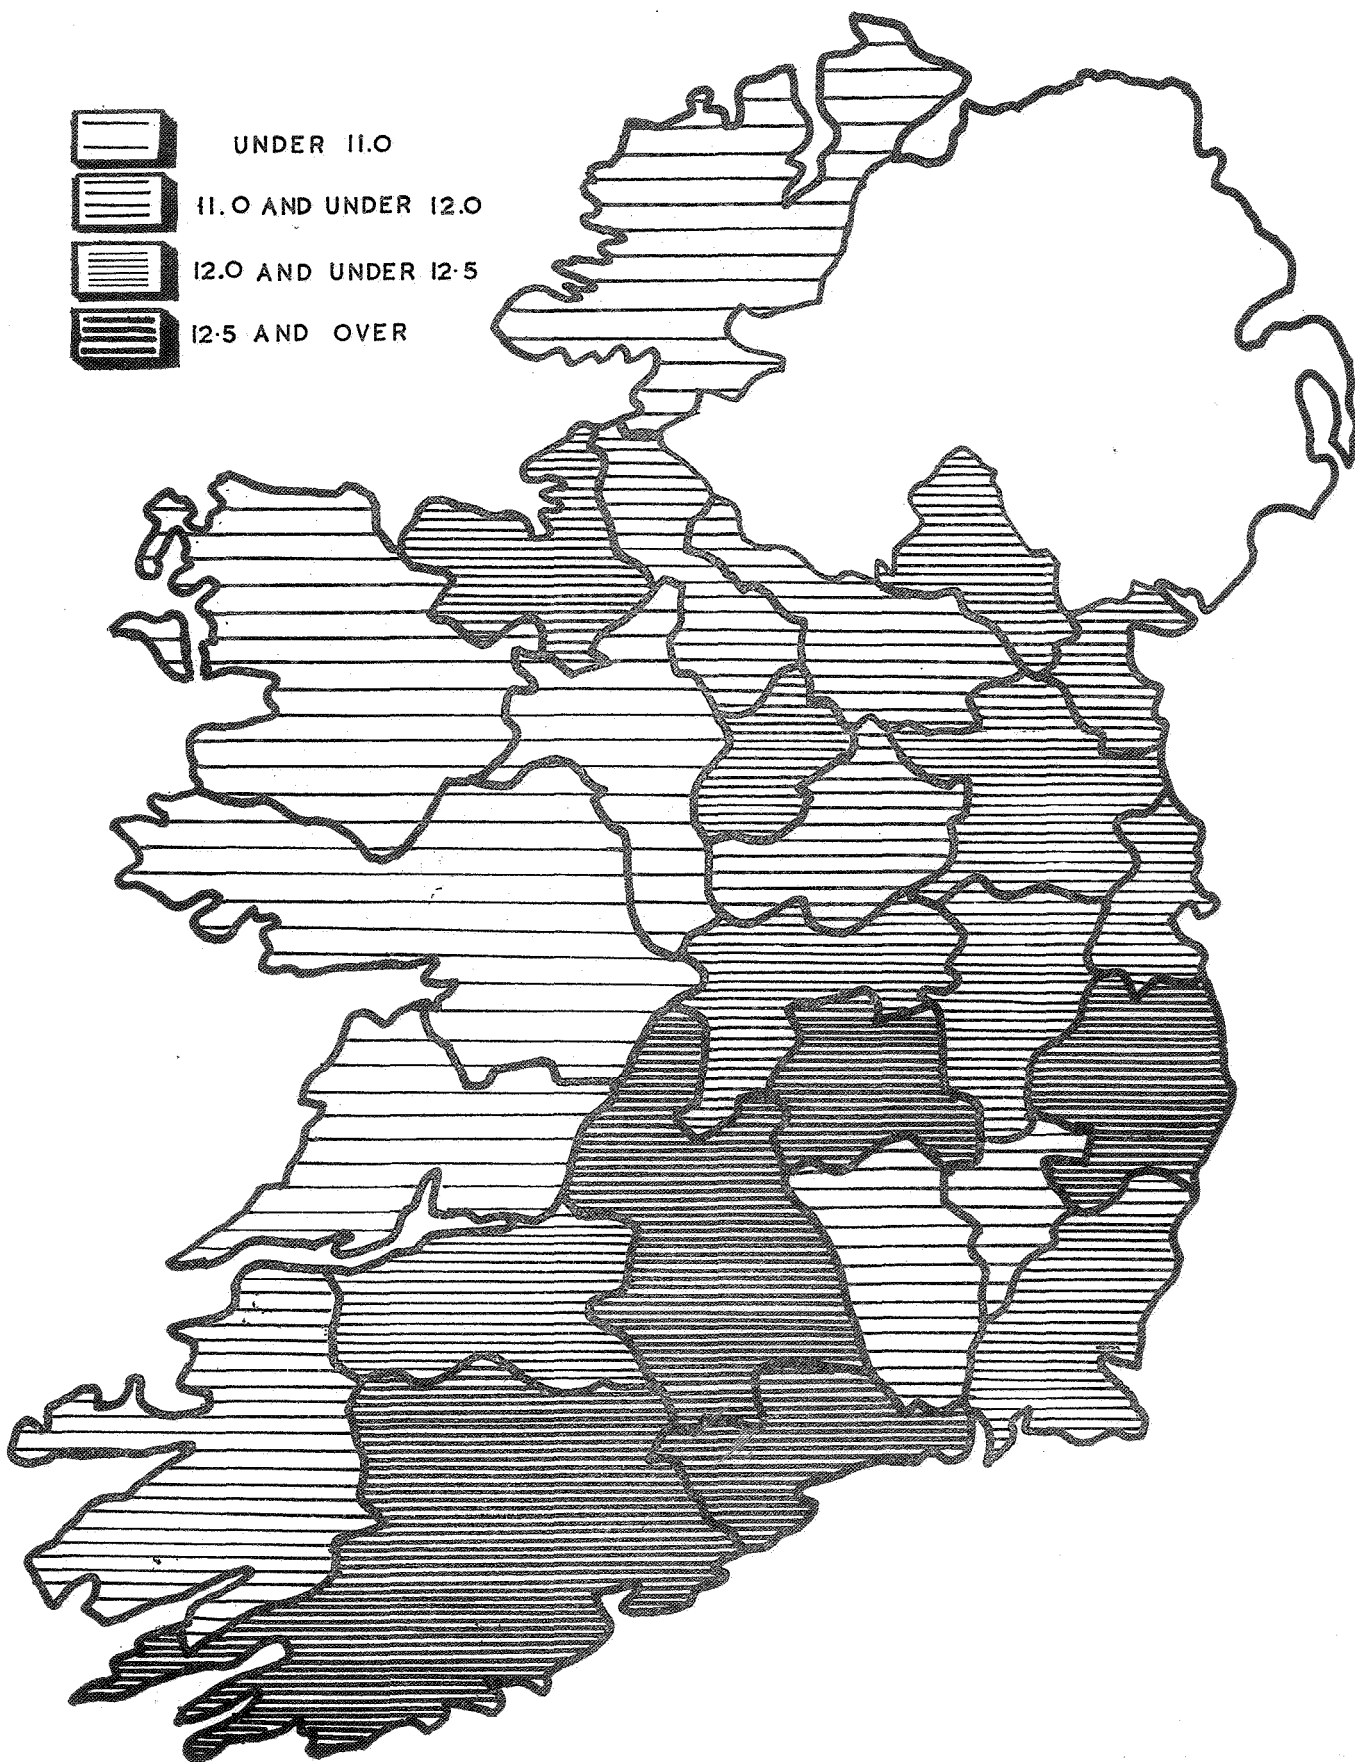

*Exclusive of the Six Counties.

Comparison between counties

A difficulty arises when comparisons are made between the death rates in different regions of the country, due to the fact that the age distribution of the population varies considerably from one county to another. Thus, if a particular county contains a large proportion of elderly persons the crude death rate per 1,000 population will be relatively high even if the health conditions in that county are better than the general average. To overcome this difficulty standardised death rates are prepared.

Diagram 2.

STANDARDISED DEATH RATES (PER 1,000 POPULATION)
FROM ALL CAUSES 1963

For a particular county this is done by calculating the death rate in each age group of the population in that county and then multiplying the death rate in each age group by the total population in the whole country in that age group and summing the resulting products. This sum is then divided by the total population in the country at all ages to decide the standardised rate for the county.

TABLE XVII

CRUDE AND STANDARDISED DEATH RATES IN EACH COUNTY AND COUNTY BOROUGH IN 1963

Area	Deaths per 1,000 population	
	Crude	Standardised
Total	11.90	11.90
Carlow	10.90	11.34
Dublin County Borough	10.26	13.53
Dun Laoghaire Borough	12.01	11.67
Dublin County (remainder)	7.38	10.68
Kildare	9.89	12.45
Kilkenny	12.22	11.84
Laois	12.97	12.53
Longford	14.04	12.34
Louth	11.06	12.25
Meath	11.94	12.42
Offaly	11.83	12.26
Westmeath	12.33	11.93
Wexford	13.01	12.31
Wicklow	11.97	12.51
Leinster	10.79	12.27
Clare	12.58	10.39
Cork County Borough	13.15	14.93
Cork County	13.14	12.12
Kerry	13.53	11.87
Limerick County Borough	9.91	12.59
Limerick County	12.92	12.27
Tipperary N.R.	12.82	12.23
Tipperary S.R.	13.31	13.06
Waterford County Borough	12.68	14.05
Waterford County	13.27	11.85
Munster	12.91	12.29
Galway	11.68	10.82
Leitrim	14.50	11.44
Mayo	13.04	10.25
Roscommon	13.99	10.70
Sligo	14.42	12.01
Connacht	12.98	10.83
Cavan	13.78	11.76
Donegal	11.95	10.07
Monaghan	13.36	12.35
Ulster (part of)	12.73	10.97

In certain areas the standardised rates differ appreciably from the crude rates. The standardised death rates in 1963 were lowest in the Counties of Donegal, Mayo and Clare and highest in the County Boroughs Cork, Waterford and Dublin and in Tipperary South.

The standardised death rate for each county is illustrated in Diagram 2.

Causes of death

The tables in this Report showing cause of death are based on the Seventh Revision of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1955, prepared by the World Health Organisation. The Seventh Revision was used for the first time in classifying deaths by causes in the 1958 Report. From 1940 to 1949 the Fifth Revision was used, and the Reports for the years 1950 to 1957 were based on the Sixth Revision.

Table XVIII shows the number of deaths and death rates in 1963 and the average annual number of deaths and death rates in each period 1945-47, 1950-52, 1955-57 and 1960-62 from some of the principal causes.

TABLE XVIII

NUMBER OF DEATHS AND DEATH RATES IN 1963 AND THE AVERAGE ANNUAL NUMBER OF DEATHS AND DEATH RATES IN EACH PERIOD 1945-47, 1950-52, 1955-57 AND 1960-62 FROM SOME OF THE PRINCIPAL CAUSES.

Causes	1945-47	1950-52	1955-57	1960-62	1963
	Average Annual Number				Number
Tuberculosis of respiratory system	2,731	1,598	625	395	388
Tuberculosis, other forms	863	442	133	43	44
Other infective and parasitic diseases	569	349	187	143	105
Cancer	3,980	4,194	4,695	4,787	4,938
Vascular lesions affecting central nervous system	2,810	2,907	3,738	3,960	4,220
Diseases of the heart	10,459	10,519	10,580	10,884	10,794
Other diseases of the circulatory system	948	1,620	2,172	1,958	2,100
Influenza	575	987	502	554	157
Other diseases of the respiratory system	3,473	2,667	2,407	2,788	3,051
Senility	6,229	4,436	2,680	2,010	1,783
Other diseases	9,213	7,769	6,287	5,233	5,139
Accidents and other external causes	910	921	988	998	1,076
All Causes	42,760	38,409	34,994	33,753	33,795
	Average annual rates per 100,000 population				Rate per 100,000 population
Tuberculosis of respiratory system	92.4	54.0	21.6	14.0	13.7
Tuberculosis, other forms	29.2	14.9	4.6	1.5	1.5
Other infective and parasitic diseases	19.2	11.8	6.5	5.1	3.7
Cancer	134.7	141.6	162.0	169.9	173.8
Vascular lesions affecting central nervous system	95.1	98.2	129.0	140.5	148.5
Diseases of the heart	353.9	355.3	365.0	386.2	379.9
Other diseases of the circulatory system	32.1	54.7	74.9	69.5	73.9
Influenza	19.5	33.3	17.3	19.7	5.5
Other diseases of the respiratory system	117.5	90.1	83.0	98.9	107.4
Senility	210.8	149.8	92.5	71.3	62.8
Other diseases	311.8	262.6	216.9	185.6	180.9
Accidents and other external causes	30.8	31.1	34.1	35.4	37.9
All Causes	1,447.0	1,297.4	1,207.4	1,197.6	1,189.5

The death rate from tuberculosis (all forms) in the year 1963 was only one-eighth of its level in the period 1945-47. Cancer deaths rose steadily over the years and the 1963 rate showed an increase of 24 per cent on the rate for 1945-47. Relatively little change has occurred since 1945-47 in the death rate from diseases of the heart although the trend has been upward, but deaths from other diseases of the circulatory system have more than doubled between 1945-47 and 1963. Vascular lesions affecting the central nervous system accounted for 50 per cent more deaths in 1963 than in 1945-47, but a decrease of 20 per cent was recorded in the number of deaths from respiratory diseases. In each period shown in the table large numbers of deaths were stated to be due simply to senility but a considerable reduction has occurred over the years under review, the number of deaths in 1963 being less than one-third of those in 1945-47. This reduction is largely explained by an increasing accuracy in certification of cause of death, as well as a falling proportion of deaths not medically certified. It will be realised that the accuracy of the comparisons made in this table is somewhat reduced by the fact that many of the deaths are not medically certified.

The following table shows the age-sex specific death rates for the principal causes of death in the year 1963.

TABLE XIX
AGE-SEX SPECIFIC DEATH RATES FOR THE PRINCIPAL CAUSES OF DEATH IN 1963

I.D.L. Nos.	Cause of death	Death rates per 100,000 corresponding population										
		All ages	0-4	5-14	15-24	25-34	35-44	45-54	55-64	65-74	75-84	85 and over

Of the total number of deaths registered in 1963 almost 69 per cent were due to four main causes, i.e. heart diseases, malignant neoplasms, vascular lesions affecting the central nervous system and respiratory diseases. Diseases of the heart were responsible for the largest proportion of all deaths, the death rates per 100,000 population being 446.6 in the case of males and 359.2 in the case of females. The great majority of deaths from heart diseases occurred at ages 55 and over, and more than 82 per cent were due to arteriosclerotic and degenerative heart disease. Malignant neoplasms were the next major cause of death, accounting for 185.6 male deaths and 161.9 female deaths in every 100,000 of their respective populations. Most of these deaths were in the age groups over 35 years and were caused chiefly by malignant neoplasms of the stomach, bronchus, trachea and lung, breast and genito-urinary organs. In the case of vascular lesions affecting the central nervous system the death rates were 135.7 for males and 161.5 for females per 100,000 corresponding population. As in the case of heart diseases, these deaths were confined mainly to the age groups 55 years and upwards and most of them were due to cerebral haemorrhage, cerebral embolism and thrombosis. Respiratory diseases caused 133.9 deaths in every 100,000 of the male population and 91.7 deaths per 100,000 of the female population. These deaths occurred mostly in the upper age groups and were due principally to pneumonia and bronchitis. It is noted, however, that pneumonia accounted for about one tenth of the total number of deaths in the 0-4 age group. Other causes which contributed substantially to the deaths of children under five years of age were certain diseases of early infancy (birth injury, postnatal asphyxia and atelectasis, immaturity, etc.) and congenital malformations. Between the ages 5 to 34 years accidents were the greatest single cause of death, whilst in the age group 35-44 nearly 45 per cent of the deaths were due to malignant neoplasms and heart diseases.

Diagram 3

DEATH RATE (PER 1,000 POPULATION) FROM TUBERCULOSIS & CANCER 1940 — 1963

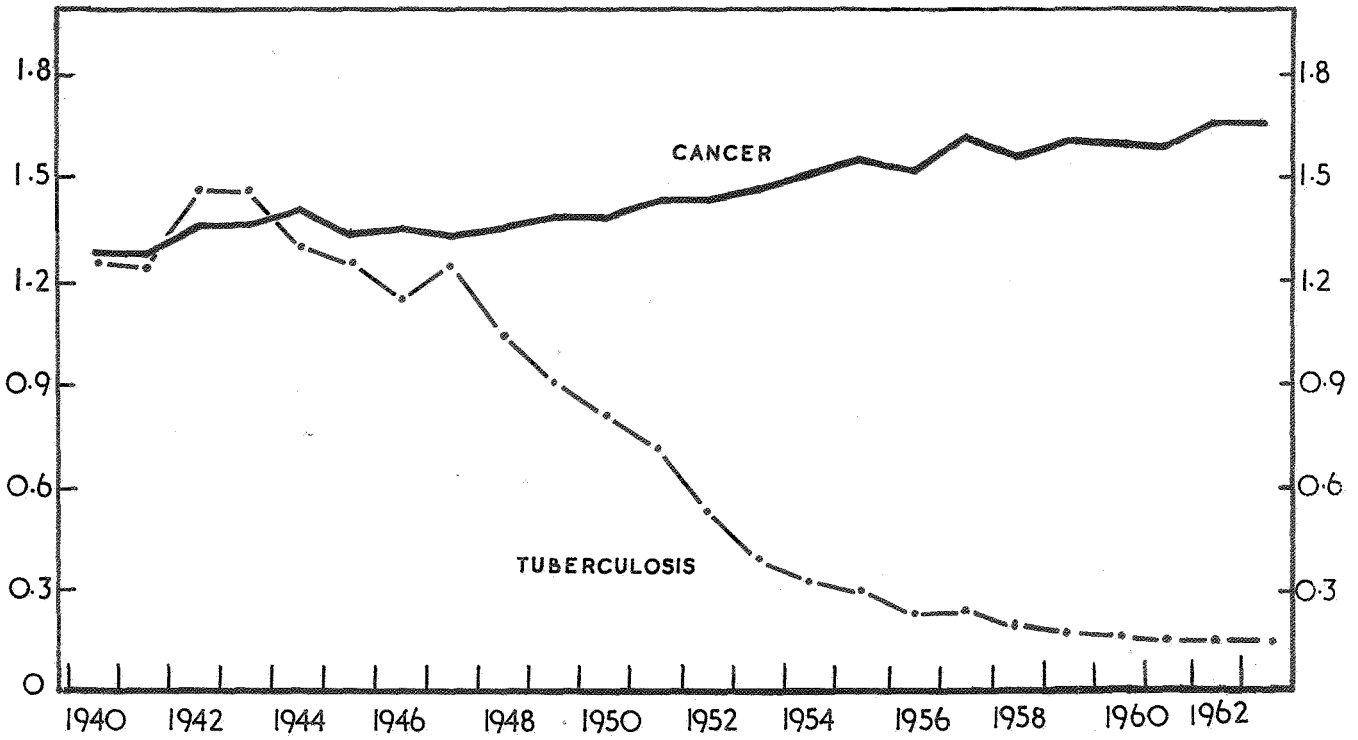

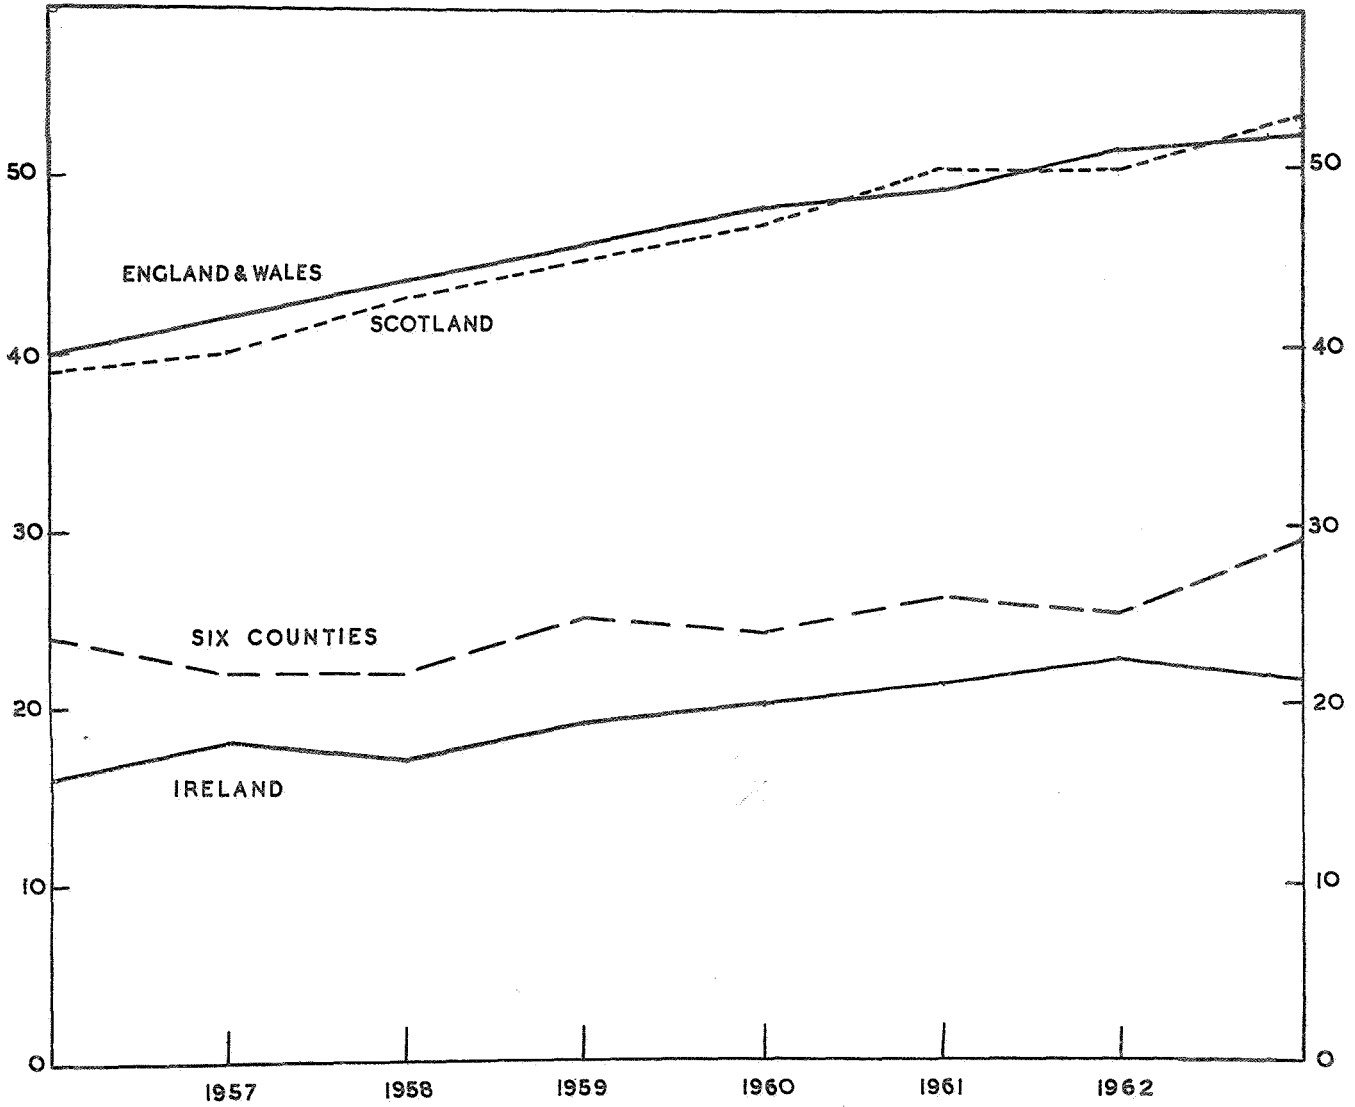

Diagram 4

DEATH RATES FROM LUNG CANCER (Nos 162-163) PER 100,000 POPULATION

Some of the principal causes of death are considered in greater detail in the following sections.

Tuberculosis

Table XX shows the number of deaths and the death rates per 1,000 population for each of the years 1953 to 1963.

TABLE XX

NUMBERS OF DEATHS AND DEATH RATES PER 1,000 POPULATION FROM TUBERCULOSIS OF THE RESPIRATORY SYSTEM AND FROM ALL OTHER FORMS OF TUBERCULOSIS, 1953-1963

Year	Tuberculosis of the respiratory system		Other forms of tuberculosis		Ratio of male to female mortality	
	Number	Rate per 1,000 population	Number	Rate per 1,000 population	Tuberculosis of respiratory system	Other forms of tuberculosis
1953	911	0.31	276	0.09	1.52	1.09
1954	797	0.27	208	0.07	1.59	0.93
1955	729	0.25	160	0.05	1.38	1.12
1956	562	0.19	127	0.04	1.81	1.31
1957	583	0.20	113	0.04	1.92	1.35
1958	502	0.18	79	0.03	1.80	1.93
1959	451	0.16	66	0.02	1.70	1.54
1960	416	0.15	52	0.02	1.81	1.00
1961	381	0.14	39	0.01	1.78	1.29
1962	387	0.14	39	0.01	2.15	1.29
1963	388	0.14	44	0.02	2.18	0.91

In 1963 there were 432 deaths from tuberculosis, of which 388 were caused by the respiratory form and 44 by other forms of the disease. There has been a marked reduction in the number of deaths, both from tuberculosis of the respiratory system and other forms, in a comparatively recent period, the number of deaths in 1963 showing a fall of 64 per cent since 1953. The trend in the death rate from tuberculosis (all forms) since 1940 is shown in Diagram 3.

In Table XXI tuberculosis death rates are examined, by age groups, for a number of different periods.

TABLE XXI

DEATH RATES IN 1963 AND AVERAGE ANNUAL DEATH RATES IN EACH PERIOD 1945-47, 1955-57 AND 1960-62 FROM ALL FORMS OF TUBERCULOSIS AT DIFFERENT AGES, PER 1,000 CORRESPONDING POPULATION.

Period	Under 15	15-19	20-24	25-34	35-44	45-54	55 and over	All ages
1945-47	0.52	1.40	2.17	1.99	1.58	1.38	0.87	1.22
1955-57	0.07	0.06	0.16	0.29	0.34	0.41	0.51	0.26
1960-62	0.02	0.01	0.04	0.10	0.20	0.25	0.40	0.16
1963	0.02	0.01	0.03	0.08	0.17	0.22	0.43	0.15

Between the periods 1945-47 and 1955-57 the death rates from tuberculosis in the younger age groups had declined considerably, and in the most recent years the rates for these groups were only a fraction of their level in 1945-47. Thus, between 1945-47 and 1963 the death rate in the age group under 15 years fell from 0.52 to 0.02 per 1,000 corresponding population and at ages 15-19 and 20-24 more striking declines occurred. In the older age groups the reduction in the death rate was less marked, the 1963 rate for the age group 55 years and over being 0.43 per 1,000 corresponding population compared with 0.87 in the period 1945-47.

The death rates from tuberculosis in the years 1953 to 1963 in this country are compared with those in the Six Counties, England and Wales and Scotland in Table XXII.

TABLE XXII
DEATHS PER 1,000 POPULATION FROM TUBERCULOSIS (ALL FORMS) IN IRELAND AND NEIGHBOURING COUNTRIES, 1953-1963

Year	Ireland*	Six Counties	England and Wales	Scotland
1953	0.40	0.23	0.20	0.26
1954	0.34	0.18	0.18	0.22
1955	0.30	0.15	0.15	0.19
1956	0.24	0.12	0.12	0.16
1957	0.24	0.13	0.11	0.14
1958	0.20	0.11	0.10	0.13
1959	0.18	0.10	0.08	0.11
1960	0.17	0.08	0.07	0.10
1961	0.15	0.07	0.07	0.09
1962	0.15	0.07	0.07	0.08
1963	0.15	0.08	0.06	0.10

*Exclusive of the Six Counties

Throughout the period the death rate from tuberculosis has been higher in Ireland than in the neighbouring countries. A feature of this table, however, is the extent to which Ireland has shared in the general improvement.

The mortality from tuberculosis in the counties and county boroughs in 1963 is compared in TABLE 12 of this Report. The highest death rates from all forms per 1,000 population were in the County Boroughs Waterford (0.28), Limerick (0.23), Cork (0.23) and Dublin (0.21) and County Kerry (0.22). The lowest rate was in County Westmeath (0.06).

Cancer

Up to 1949 cancer deaths were those classified as Nos. 045 to 055 of the Fifth Revision of the International List of Causes of Death, while in the years 1950 to 1957, deaths were classified according to the Sixth Revision. The 1958 and subsequent Reports are based on the Seventh Revision of the International List. It has been recommended by the World Health Organisation that total cancer deaths should be based upon Nos. 140 to 205 of the International Statistical Classification, but that for comparability with years prior to 1950 Nos. 140 to 205, excluding Nos. 201 (Hodgkin's disease) and 204 (Leukaemia and aleukaemia) should also be shown.

In 1963 there were 4,938 deaths from cancer (Nos. 140 to 205). Of this number, 59 deaths were caused by Hodgkin's disease and 139 by leukaemia and aleukaemia.

Table XXIII shows the death rate from cancer in certain age groups in the years 1953 to 1963.

TABLE XXIII
DEATHS FROM CANCER (Nos. 140-205) CLASSIFIED BY SEX AND AGE PER 100,000 POPULATION AT THE SAME AGES, 1953 TO 1963

Year	Age group (years)							Total
	Under 25	25-34	35-44	45-54	55-64	65-74	75 and over	
Males								
1953	8	20	54	169	406	808	1,188	164
1954	8	20	48	164	394	866	1,149	165

1961	9	20	50	162	437	865	1,374	183
1962	8	20	52	196	460	877	1,382	190
1963	6	19	43	164	475	884	1,379	186
Females								
1953	7	24	76	203	337	591	716	140
1954	6	19	61	196	367	644	810	147
1955	5	21	66	181	348	658	768	145
1956	6	19	68	188	349	609	846	145
1957	7	18	73	207	378	619	960	157
1958	5	16	73	190	363	629	977	155
1959	6	24	66	182	345	614	972	153
1960	7	13	60	189	375	664	908	158
1961	6	26	63	178	343	600	893	151
1962	6	17	74	195	343	630	929	156
1963	7	23	81	187	351	636	981	162

In the years under review the death rates from cancer were generally higher among males than among females, particularly in the age groups 55 and upwards; in 1963 the male death rate for all ages was almost 15 per cent above that for females. In the age groups under 54 years the cancer death rates for males were below those for females but at other ages, particularly above 65 years, the excess of male deaths was very marked. The trend in the death rate from cancer since 1940 is shown in Diagram 3; for the reason given earlier, the figures plotted in this diagram exclude deaths from Hodgkin's disease and leukaemia and aleukaemia.

The death rates from cancer in Ireland and neighbouring countries in the years 1953 to 1963 are compared in Table XXIV.

TABLE XXIV

DEATHS FROM CANCER (Nos. 140-205) PER 1,000 POPULATION IN IRELAND AND NEIGHBOURING COUNTRIES, 1953 TO 1963

Year	Ireland*	Six Counties	England and Wales	Scotland
1953	1.52	1.58	1.99	1.99
1954	1.56	1.54	2.03	2.06
1955	1.61	1.60	2.03	2.07
1956	1.58	1.63	2.08	2.10
1957	1.67	1.70	2.09	2.10
1958	1.64	1.67	2.12	2.11
1959	1.68	1.67	2.14	2.14
1960	1.68	1.62	2.16	2.13
1961	1.67	1.60	2.16	2.16
1962	1.73	1.54	2.18	2.21
1963	1.74	1.63	2.18	2.25

*Exclusive of the Six Counties

In the period under review the rates for England and Wales and Scotland were consistently higher than those for this country and the Six Counties.

The death rates from cancer in 1963 in counties and county boroughs are compared in Table XXV. Standardised rates, which eliminate the effect of different age distributions in the different areas, are also shown.

TABLE XXV

DEATH RATES FROM CANCER (Nos. 140-205) IN EACH COUNTY AND COUNTY BOROUGH (CRUDE AND STANDARDISED) IN 1963

Area	Rate per 1,000 population		Area	Rate per 1,000 population	
	Crude	Standardised		Crude	Standardised
Carlow	1.30	1.34	Clare	1.83	1.56
Dublin County Borough	1.82	2.21	Cork County Borough	2.00	2.23
Dun Laoghaire Borough	2.13	2.05	Cork County	1.86	1.72
Dublin County (remainder)	1.21	1.80	Kerry	1.62	1.43
Kildare	1.37	1.69	Limerick County Borough	1.30	1.60
Kilkenny	1.62	1.57	Limerick County	1.76	1.66
Laois	1.71	1.67	Tipperary, N.R.	1.34	1.28
Longford	1.52	1.34	Tipperary, S.R.	2.07	2.03
Louth	1.81	2.01	Waterford County Borough	2.04	2.27
Meath	1.64	1.71	Waterford County	2.10	1.87
Offaly	1.66	1.72			
Westmeath	1.63	1.60	Munster	1.80	1.71
Wexford	2.02	1.93			
Wicklow	1.79	1.86	Galway	1.51	1.41
			Leitrim	2.01	1.54
Leinster	1.70	1.90	Mayo	1.69	1.42
			Roscommon	1.72	1.38
Cavan	1.67	1.42	Sligo	2.08	1.79
Donegal	1.79	1.55			
Monaghan	1.95	1.78	Connacht	1.71	1.47
Ulster (part of)	1.79	1.57	TOTAL	1.74	1.74

The crude death rate from cancer in 1963 varied from 2.13 per 1,000 population in Dun Laoghaire Borough to 1.21 in Dublin County (remainder). In certain areas, however, the standardised rates were considerably different from the crude rates and when comparing the relative seriousness of mortality in different counties it is, of course, the standardised rates which should be used. In the counties of the west

TABLE XXVI

MORTALITY IN 1963 FROM MALIGNANT NEOPLASMS CLASSIFIED BY SITE, SEX AND AGE

	Total	6.2	18.8	42.9	163.7	475.1	833.7	1,378.6	185.6	6.8	22.7	81.2	187.2	351.4	635.6	980.8	161.9

and north-west standardisation had the effect of lowering the death rates considerably. The standardised rates varied from 2.27 per 1,000 population in Waterford County Borough to 1.28 in Tipperary N.R. The proportion of deaths not medically certified varies widely between the different areas, being very high (i.e. over 10 per cent) in the counties of Leitrim, Mayo and Kerry and low (i.e., less than one per cent) in the County Boroughs and in the counties of Dublin, Kildare, Louth and Wicklow. Thus, the possibility that some cancer deaths in the areas with low medical certification may escape detection should be borne in mind in comparing the death rates between counties.

Full details of deaths due to cancer registered in 1963, classified by site of the disease, and age group are contained in TABLE 19. The number of deaths and death rate from cancer per 100,000 in each age group for the main groups of sites are shown in Table XXVI and it will be observed that there is in general a rapid rise in the death rate with increasing age. Deaths due to malignant neoplasms of the digestive system represented almost half the total cancer deaths for each sex, the death rate being almost 19 per cent higher for males than for females. The death rate from malignant neoplasms of the respiratory system was over three times greater for males than for females. In the case of malignant neoplasms of the breast and genito-urinary organs the female death rate was double that of males.

Cancer of the bronchus, trachea and lung

The number of deaths and death rates from cancer of the bronchus, trachea and lung (Nos. 162 and 163) in each year 1957 to 1963, classified by sex and age group, are shown in Table XXVII.

TABLE XXVII

DEATHS AND DEATH RATES PER 100,000 CORRESPONDING POPULATION IN EACH YEAR 1957 TO 1963 FROM CANCER OF THE BRONCHUS, TRACHEA AND LUNG, (Nos. 162-163) CLASSIFIED BY SEX AND AGE GROUP

Year	Males						Females					
	Under 35 years	35-44 years	45-45 years	55-64 years	65 years and over	Total	Under 35 years	35-44 years	45-54 years	55-64 years	65 years and over	Total
Number of deaths												
1957	1	16	70	159	144	390	3	4	20	45	61	133

1963	1	20	76	176	216	489	.	4	25	30	62	121
Death rates per 100,000 corresponding population												
1957	0.1	8.7	40.8	114.6	98.1	26.8	0.4	2.2	12.4	32.9	37.4	9.3
1958	0.3	10.0	38.4	104.1	104.5	26.6	0.1	4.5	8.6	23.0	29.9	7.2
1959	0.4	13.0	41.9	120.9	111.8	29.9	0.1	2.8	11.1	18.5	30.5	6.9
1960	0.5	9.0	42.2	150.3	113.2	32.4	0.1	1.2	11.8	29.8	27.1	7.6
1961	0.5	9.6	41.6	138.3	147.3	34.9	0.1	2.3	13.0	25.3	29.6	7.8
1962	0.6	9.6	56.8	132.3	136.0	35.0	0.3	3.5	17.4	32.8	37.4	10.1
1963	0.1	12.4	44.7	129.8	144.5	34.3	.	2.4	15.3	22.3	36.9	8.6

The main point that emerges from this table is that deaths from cancer of the bronchus, trachea and lung are much more common among males than among females. In 1957 the death rate in the case of males was 26.8 compared with 9.3 in the case of females and by 1963 the disparity was even greater, the corresponding rates for that year being 34.3 and 8.6 respectively. In each of the years shown 75 to over 80 per cent of both male and female deaths occurred at ages 55 years and over, whilst the number of deaths in the age group under 35 years seldom exceeded 2 per cent of the total.

The following Table shows deaths and death rates from cancer of the bronchus, trachea and lung (Nos. 162 and 163) in Ireland and neighbouring countries during the years 1958 to 1963.

TABLE XXVIII

DEATHS AND DEATH RATES IN IRELAND AND NEIGHBOURING COUNTRIES FROM CANCER OF THE BRONCHUS, TRACHEA AND LUNG (NOS. 162 AND 163) IN EACH YEAR 1958 TO 1963

Area	1958	1959	1960	1961	1962	1963
	No. of deaths					
Ireland*	485	527	567	604	639	610
Six Counties	314	346	335	365	360	414
Scotland	2,226	2,330	2,422	2,478	2,604	2,772
England and Wales	19,820	21,063	22,000	22,810	23,779	24,434
	Rates per 100,000 population					
Ireland*	17	19	20	21	23	21
Six Counties	22	25	24	26	25	29
Scotland	43	45	46	47	50	53
England and Wales	44	46	48	49	51	52

*Exclusive of the Six Counties.

The most significant feature of this table is the low rate in Ireland in each year compared with those in the other areas. Throughout the period under review the yearly rates for England and Wales and Scotland were more than double the Irish rates, while the Six County rates exceeded those for this country by at least 20 per cent in every year except 1962. In 1963 the Irish rate was lower than that in 1962 whereas increases were recorded in all the other areas. The trend in each area is illustrated in Diagram 4.

Diseases of the circulatory system

There were 12,894 deaths ascribed to diseases of the circulatory system (Nos. 400-468) registered in 1963, of which 7,123 were deaths of males and 5,771 deaths of females. Details of these deaths, classified by cause and age may be obtained from TABLE 19 of this Report while the numbers assigned to each county or county borough are shown in TABLE 20. Deaths and death rates from certain groups of causes are given in Table XXIX.

The excess of male over female deaths in the case of diseases of the circulatory system is largely accounted for by the greater number of deaths of males from coronary and arteriosclerotic heart disease (3,199 males compared with 1,759 females); in respect of the remaining groups of causes the difference between the male and female death rates is not nearly so pronounced. In interpreting Table XXIX it should be borne in mind that a number of deaths (mainly of elderly persons), stated to be due to heart diseases, are not medically certified. The numbers of uncertified deaths in the above groups are shown in Table XXX.

TABLE XXX

DEATHS FROM DISEASES OF THE CIRCULATORY SYSTEM REGISTERED IN 1963 SHOWING THE NUMBERS AND PERCENTAGES NOT MEDICALLY CERTIFIED

A possible source of error is the large number of uncertified deaths ascribed simply to "senility." Thus, out of a total of 1,783 deaths (801 male, 982 female) stated to be due to senility, 933 (455 male, 478 female) were not medically certified. Of these uncertified deaths it is fair to suppose that a substantial proportion were caused by heart diseases.

Respiratory diseases

Deaths from respiratory diseases (Nos. 470-527 in the International List) in 1963 numbered 3,208. These included 157 deaths caused by influenza, 1,307 by pneumonia, 1,362 by bronchitis and 382 due to other respiratory diseases.

Pregnancy, childbirth and puerperium

The number of maternal deaths in 1963 was 22, five fewer than in 1962. The death rate was 0.35 per thousand births. Table XXXI shows the maternal deaths in 1963 classified by age of mother and cause and also deaths associated with pregnancy, childbirth and puerperium, but not classified as maternal, for the same year.

TABLE XXXI
MATERNAL DEATHS IN 1963 CLASSIFIED BY AGE OF MOTHER AND PRINCIPAL CAUSE.

Cause of death	All ages	Age group						45 years and upwards

Table XXXII shows the maternal mortality rates in Ireland and the neighbouring countries for the years 1953 to 1963.

TABLE XXXII
MATERNAL DEATHS PER 100,000 BIRTHS IN IRELAND AND NEIGHBOURING COUNTRIES, 1953-1963

Year	Number of deaths Ireland*	Deaths per 100,000 live births			
		Ireland*	Six Counties	England and Wales	Scotland
1953	83	133	59	77	95
1954	69	110	73	71	76
1955	70	114	83	66	46
1956	52	86	58	57	54
1957	81	132	110	48	47
1958	61	103	56	44	54
1959	39	65	55	39	36
1960	35	58	44	39	34
1961	27	45	52	34	37
1962	27	44	30	36	40
1963	22	35	41	28	40

*Exclusive of the Six Counties.

The maternal mortality rates for England and Wales and this country in 1963 were the lowest ever recorded but in the case of the Six Counties the 1963 rate showed a noticeable increase over that in 1962, while the Scottish rate remained unchanged. It will be noted that in the period under review, the decline in the Irish rate has been greater than in any of the other areas.

Infant Mortality

During the year 1963 the deaths of 1,682 infants under one year of age were registered, compared with 1,800 in the previous year and 1,827 in 1961. The 1963 rate was 26.6 per 1,000 live births registered, compared with 29.1 in 1962 and 30.5 in 1961.

Table XXXIII shows the mortality rates at different ages under one year for the years 1947 to 1963.

TABLE XXXIII

1963	7.6	6.5	1.5	1.1	1.1	17.8	2.3	1.6	2.9	2.0	8.8	26.6	

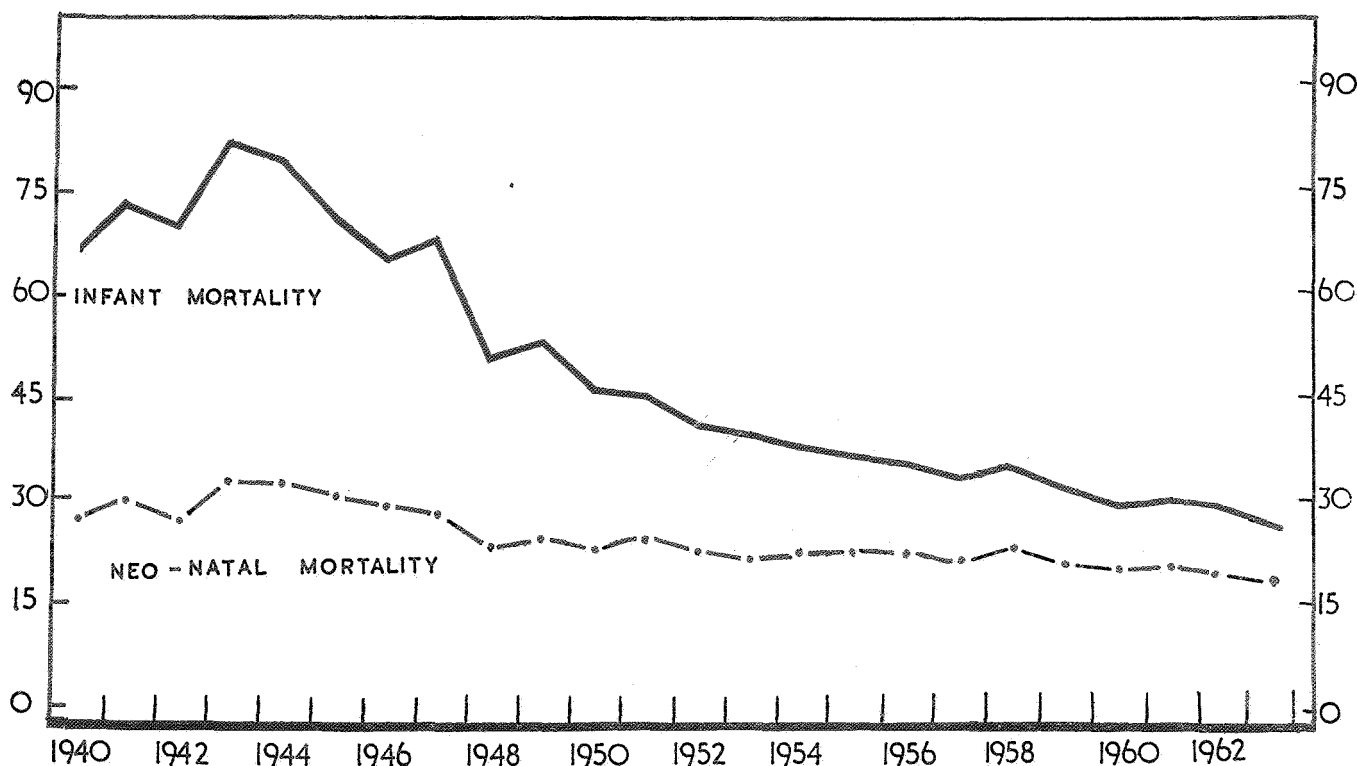

*Under one month prior to 1950.

Infant mortality has shown a considerable reduction since 1947 and the rate for 1963 (26.6 per 1,000 live births) was the lowest ever recorded. The greatest improvement has been in respect of mortality of infants over four weeks which showed a decline of 77 per cent in the period 1947-1963. The reduction in neo-natal mortality (i.e. at ages under four weeks) was less marked being only 38 per cent in that period. No significant changes occurred since 1947 in mortality at ages under 24 hours but in the age group 1-6 days the rate fell by over 25 per cent whilst between the ages 7 days and 28 days a decline of almost 14 per cent was recorded.

The trends in infant and neo-natal mortality rates are illustrated in Diagram 5.

Diagram 5

INFANT AND NEO-NATAL MORTALITY (PER 1,000 LIVE BIRTHS) 1940-1963

In Table XXXIV the infant mortality rates in Ireland and neighbouring countries are compared for the years 1953 to 1963.

TABLE XXXIV

INFANT MORTALITY RATES IN IRELAND AND NEIGHBOURING COUNTRIES, 1953-1963

Period	Deaths of infants under 1 year per 1,000 live births			
	Ireland*	Six Counties	England and Wales	Scotland
1953	39	38	27	31

1962	29	27	22	27
1963	27	27	21	26

*Exclusive of the Six Counties.

The infant mortality rate in this country was the highest in the table in every year from 1953 to 1962, but in 1963 it fell to the level of the Six County rate and, over the period under review, the decline has been greater than in any of the other areas.

Table XXXV compares the neo-natal and infant mortality rates in the year 1963 for counties and county boroughs.

TABLE XXXV

NEO-NATAL AND INFANT MORTALITY RATES FOR COUNTIES AND COUNTY BOROUGHS IN 1963

NOTE—In some cases the figures in the first two columns do not tot to that in the third column on account of rounding.

In 1963 the infant mortality rates were highest in Counties Kilkenny, Laois, Limerick and Tipperary N.R., and lowest in County Wicklow and Waterford Co. Borough. The neo-natal rate ranged from 10 per 1,000 births in Waterford County Borough to 29 per 1,000 births in County Laois.

The causes of deaths of infants under one year, classified according to the Detailed International List are shown in TABLE 19. In TABLE 26 infant deaths are again classified by cause and a more detailed age classification shown. These results are summarised in Table XXXVI.

TABLE XXXVI

DEATHS OF INFANTS UNDER ONE YEAR REGISTERED IN 1963, CLASSIFIED BY CAUSE AND AGE

International List Nos.	Cause	Age				
		Under 1 day	1 day to 1 week	1 week to 4 weeks	4 weeks to 1 year	Total under 1 year
001-019	Tuberculosis, all forms	4	4
340	Meningitis, except meningococcal and tuberculous ..	.	2	1	10	13
056,470-475 480-483 490-493 500-502 510-527, 763	Whooping cough, influenza, pneumonia, bronchitis, and other respiratory diseases	5	23	65	196	289
530-587, 764	Diseases of digestive system (including gastro-enteritis, colitis and diarrhoea of newborn) ..	2	7	13	49	71
750-759	Congenital malformations	105	102	83	171	461
760, 761	Birth injuries	41	52	8	.	101
762	Asphyxia and atelectasis	96	64	9	3	172
770	Haemolytic disease (erythroblastosis)	28	9	5	2	44
771	Haemorrhagic disease	2	10	3	.	15
774, 776	Immaturity	134	78	10	.	222
773-0	Ill-defined diseases of early infancy :— Without mention of immaturity	17	18	6	16	57
773-5	With mention of immaturity	31	28	2	3	64
780-2	Convulsions	1	2	6	9
	Other causes	19	18	25	98	160
	Total	480	412	232	558	1,682

It will be seen that the relative importance of the various groups of causes differs appreciably between deaths at ages under one week and deaths at ages 4 weeks to one year. At ages under one week 24 per cent of all deaths were ascribed to immaturity, while as may be seen from TABLE 26, immaturity was a contributory factor to many deaths ascribed to other underlying causes. Congenital malformations accounted for 23 per cent of deaths under one week, post-natal asphyxia and atelectasis 18 per cent and birth injuries 10 per cent. Fifteen per cent of the deaths under one week were assigned to the heading "Ill-defined diseases of early infancy" (No. 773 of the Detailed International List); deaths described by such terms as "asthenia," "Athrepsia," "cachexia," "debility," "inanition," "marasmus," "cyanosis neonatorum," "hepatitis of newborn" or "sclerema neonatorum" and not otherwise specified are allocated to this heading. The majority of deaths due to haemolytic or haemorrhagic disease were at ages under one week. At ages over 4 weeks respiratory diseases (35 per cent) and congenital malformations (31 per cent) were the main causes of death but only a small proportion were ascribed to immaturity or asphyxia. Details of the 160 deaths ascribed to "other causes" may be obtained from TABLE 19. This figure includes 23 deaths from other infections of the new-born, 5 from leukaemia, 8 from diseases of the thymus gland, 35 from mental deficiency, 12 from kidney infections and 43 from external causes.

Accidents, poisoning and violence

The number of deaths from external causes (Nos. E800-999) registered in 1963 was 1,076, of which 675 were those of males and 401 those of females. The corresponding figures for 1962 were 986, 639 and 347 respectively. The excess of male mortality from these causes was very marked at all ages between 5 and 75 years. In the age groups between 10 and 45 years, in which male deaths from all causes outnumbered female deaths, it will be seen from TABLE 19 that the excess of male deaths was almost entirely due to the higher number of deaths from accidents. Table XXXVII shows the number of deaths from accidents, poisoning and violence in 1963 and previous years.

TABLE XXXVII

DEATHS FROM ACCIDENTS, POISONING AND VIOLENCE, 1952 TO 1963

Cause of death	1952	1953	1954	1955	1956	1957	1958	1959	1960	1961	1962	1963

Total deaths from accidents in the home		M	93	22	2	6	4	3	5	8	14	19
		F	88	6	3	2	.	.	1	.	9	46

There were 181 deaths resulting from accidents in the home registered in 1963, compared with 160 in the previous year. Accidental falls accounted for 56 deaths, the majority of which were deaths of elderly persons. Many deaths caused by falls are certified on medical certificates which do not indicate the place of occurrence and therefore this number does not cover all deaths due to falls in the home. In 1963 there were 316 deaths attributed to accidental falls and it is probable that most of these falls occurred in the home. Accidents caused by fire, hot liquids, etc. resulted in 57 deaths, of which 3 were of children under 5 years of age and 39 were of persons 65 years and over. Sixteen deaths of children aged under one year were due to obstruction and suffocation by food and 7 to suffocation in bed and cradle. There were 17 deaths from accidental poisoning, 8 of which were of persons aged 55 years and over.

Uncertified deaths

The number of cases in 1963 in which the cause of death was not certified by a medical practitioner was 1,436, which represents 4.2 per cent of the total deaths registered. In TABLE 23 uncertified deaths registered in 1963 are shown classified by county and age group, while the percentage of deaths uncertified in each county is also shown. The proportion of deaths uncertified is very high in the west and north-west regions of the country, being highest, in the year 1963, in the counties of Leitrim (15.6 per cent), Mayo (13.8 per cent), Donegal (9.4 per cent) and Galway (9.4 per cent).

Table XXXIX compares the percentages of deaths uncertified in each province for a number of years, and it will be observed that a steady improvement in the position is taking place.

TABLE XXXIX

UNCERTIFIED DEATHS AS A PERCENTAGE OF THE TOTAL REGISTERED IN EACH PROVINCE IN THE YEARS 1952 TO 1963

Province	1952	1953	1954	1955	1956	1957	1958	1959	1960	1961	1962	1963
Leinster	4.6	3.6	3.4	3.5	2.6	2.6	2.0	1.8	1.6	1.5	1.4	1.4
Munster	9.4	9.3	8.4	7.8	7.4	7.2	6.5	6.0	5.5	4.7	4.4	4.2
Connacht	24.4	22.8	21.1	20.3	18.0	16.9	16.3	15.8	14.8	12.5	12.5	11.0
Ulster (part of)	16.2	15.7	16.0	14.7	13.6	10.8	11.0	10.3	8.1	7.9	7.9	6.4
Total	10.6	9.3	9.2	8.3	7.7	7.1	6.6	6.1	5.6	4.9	4.7	4.2

Table XL shows the percentage of deaths uncertified in 1963 by age group, in each province.

TABLE XL

PERCENTAGE OF DEATHS UNCERTIFIED, BY AGE GROUPS, IN EACH PROVINCE IN 1963

Province	All ages	Under 1 year	1-4	5-14	15-24	25-34	35-44	45-54	55-64	65-74	75 and over
Leinster	1.4	0.3	0.8	.	.	.	0.5	0.6	0.8	1.3	2.1
Munster	4.2	0.6	.	.	1.4	0.9	0.8	1.6	1.6	1.9	7.1
Connacht	11.0	3.2	3.8	4.0	2.6	2.0	1.6	1.1	1.7	4.5	17.9
Ulster (part of)	6.4	1.0	1.5	2.2	4.4	2.8	9.8
Total	4.2	0.8	0.9	0.5	0.8	0.6	0.8	1.1	1.4	2.1	7.4
Actual number of deaths uncertified	1,436	13	2	1	2	2	7	23	63	173	1,150

The proportion of deaths uncertified was highest in the age groups 65-74 years and 75 years and over, while only a very small number of young adult deaths were uncertified. In most age groups the provinces of Connacht and Ulster (part of) compare unfavourably with Leinster and Munster in respect of the percentage of deaths uncertified.

Inquests and post-mortems

The number of deaths registered on certificates issued by coroners as the result of inquests and post-mortem examinations during 1963 was 1,792 compared with 1,593 in 1962 and 1,623 in 1961.

PART II—TABLES

In the following tables births are classified according to the area of residence of the mother and deaths according to the area of residence of the deceased.

TABLE 1.—ESTIMATED POPULATION IN THOUSANDS AT THE MIDDLE OF EACH YEAR,* 1851 TO 1963

Year	Persons	Males	Females	Year	Persons	Males	Females	Year	Persons	Males	Females

TABLE 7.—DEATHS FROM PRINCIPAL CAUSES IN IRELAND AND THE SIX COUNTIES, 1963, WITH RATES PER 100,000 POPULATION

NOTE.—The classification of cause of death in this table is based on the Abbreviated List, 1955.

Detailed List No.	Cause of death	Ireland*		Six Counties	
		Number	Rate	Number	Rate
	All causes	33,795	1,189.5	15,899	1,099.5
001-008	Tuberculosis of respiratory system	388	13.6	102	7.1
010-019	Tuberculosis, other forms	44	1.5	12	0.8
020-029	Syphilis and its sequelae	8	0.3	16	1.1
040	Typhoid fever	2	0.1	.	.
045-048	Dysentery, all forms	3	0.1	.	.
050-051	Scarlet fever and streptococcal sore throat ...	2	0.1	.	.
055	Diphtheria	2	0.1	.	.
056	Whooping cough	2	0.1	2	0.1
057	Meningococcal infections	5	0.2	1	0.1
080	Acute poliomyelitis	1	0.0	1	0.1
085	Measles	8	0.3	3	0.2
100-108	Typhus and other rickettsial diseases
110-117	Malaria
030-039, 041, 042, 044, 049, 052-054, 059-074, 081-083, 086-096, 120-138	All other diseases classified as infective and parasitic	72	2.5	35	2.4
140-205	Malignant neoplasms including neoplasms of lymphatic and haematopoietic tissues:				
140-205 (except 201 and 204)	(a) Cancer	4,740	166.8	2,252	155.6
201, 204	(b) Hodgkin's disease and leukaemia ...	198	7.0	101	7.0
210-239	Benign and unspecified neoplasms	122	4.3	57	3.9
260	Diabetes mellitus	261	9.2	93	6.4
290-293	Anaemias	139	4.9	51	3.5
330-334	Vascular lesions affecting central nervous system	4,220	148.5	2,215	153.2
340	Non-meningococcal meningitis	30	1.1	15	1.0
400-402	Rheumatic fever	7	0.2	12	0.8
410-416	Chronic rheumatic heart disease	317	11.2	192	13.3

* Exclusive of the Six Counties.

TABLE 7.—(contd.)—DEATHS FROM PRINCIPAL CAUSES IN IRELAND AND THE SIX COUNTIES, 1963,
WITH RATES PER 100,000 POPULATION

Detailed List No.	Cause of death	Ireland*		Six Counties	
		Number	Rate	Number	Rate
420-422	Arteriosclerotic and degenerative heart disease	8,886	312.8	4,853	335.6
430-434	Other diseases of heart	1,591	56.0	680	47.0
440-443	Hypertensive heart disease	659	23.2	354	24.5
444-447	Other hypertensive disease	373	13.1	113	7.8
480-483	Influenza	157	5.5	77	5.3
490-493	Pneumonia	1,307	46.0	738	51.0
500-502	Bronchitis	1,362	47.9	764	52.8
540-541	Ulcer of stomach and duodenum	225	7.9	112	7.7
550-553	Appendicitis	39	1.4	14	1.0
560, 561, 570	Intestinal obstruction and hernia	162	5.7	93	6.4
543, 571, 572	Gastritis, duodenitis, enteritis and colitis, except diarrhoea of newborn	139	4.9	60	4.1
581	Cirrhosis of liver	67	2.3	41	2.8
590-594	Nephritis and nephrosis	374	13.2	104	7.2
610	Hyperplasia of prostate	187	6.6	62	4.3
640-689	Deliveries and complications of pregnancy, child- birth and the puerperium	22	0.8	14	1.0
750-759	Congenital malformations	576	20.3	270	18.7
760-762	Birth injuries, post-natal asphyxia and atelectasis	273	9.6	228	15.8
763-768	Infections of newborn	109	3.8	28	1.9
769-776	Other diseases peculiar to early infancy and im- maturity unqualified	415	14.6	209	14.5
780-795	Senility without mention of psychosis, ill-defined and unknown causes	2,189	77.0	76	5.3
	All other diseases	3,036	106.9	1,244	86.0
E810-E835	Motor vehicle accidents	287	10.1	180	12.4
E800-E802 E840-E962	All other accidents	710	25.0	331	22.9
E963, E970-E979	Suicide and self-inflicted injury	70	2.5	87	6.0
E964-E965, E980- E999	Homicide and operations of war	9	0.3	7	0.5

* Exclusive of the Six Counties.

TABLE 8.—AVERAGE ANNUAL NUMBER OF DEATHS REGISTERED DURING THE PERIOD 1864-1960 AND THE NUMBER OF DEATHS REGISTERED IN 1961, 1962 AND 1963, CLASSIFIED BY SEX AND AGE
