Part II – Tables

Table No.		Page
1	Estimated population in thousands in each year 1851–1991	48
2	Estimated population by age, 1985–1991	49
3	Population by sex of each county and county borough according to the Census of Population, 1991	50
4	Marriages, births and deaths and natural increase (excess of births over deaths) 1864–1991	51
5	Marriage, birth, death and infant mortality rates and rate of natural increase, 1864–1991	52
6A	Marriages during each of the years 1981–1991 with rates per 1,000 population	53
6B	Births and deaths during each year 1981–1991 classified by quarter of occurrence with rates per 1,000 population	54
6C	Marriages, births and deaths during each year 1986–1991 classified by month and quarter of occurrence	55
7	Deaths from principal causes in Ireland and Northern Ireland, 1991 with rates per 100,000 population	56
8	Average annual number of deaths during the period 1864–1980 and the number of deaths in the years 1981–1991 classified by sex and age	58
9	Average annual death rates for the period 1864–1980 and the death rates for the years 1981 to 1991 per 1,000 corresponding population classified by sex and age	60
10	Births and deaths in each county and county borough in 1991 and the numbers relating to the resident population of each area, with corresponding particulars for births outside marriage and deaths of infants under one year of age	62
11	Marriages registered in and births and deaths assigned to each county and county borough during 1991 showing separately births outside marriage and deaths from some principal causes	64
12	Marriage, birth and death rates and the proportion of births outside marriage in each county and county borough and the death rates for some diseases in 1991	65
13	Deaths in 1991 classified by marital status and sex in certain age groups	66
14	Births and deaths assigned to each urban district in 1991 classified by sex	66
15	Births and deaths classified by sex in 1991 assigned to the principal towns and aggregate urban and rural districts, showing separately births outside marriage and the deaths from tuberculosis and malignant neoplasms	67
16	Birth and death rates in 1991 in the principal towns and in aggregate urban and aggregate rural districts, the proportions of births outside marriage and the death rates from tuberculosis and malignant neoplasms	68
17	Deaths occurring in 1991 at each year of age of residents in the aggregate urban districts and in the aggregate rural districts	69
18	Deaths occurring in 1991 classified by sex and age of residents in each province, county borough and county	72
19	Deaths in 1991 classified by cause (International Detailed List, 9th revision, 1975) and by sex and age	76
19A	Deaths from external causes in 1991 classified by nature of the injury or poisoning and by sex	116

Tables (contd.)

Table No.		Page
20	Deaths of residents of each county and county borough in 1991 classified by cause and showing the number of uncertified deaths	126
21	Deaths occurring in 1991 classified by cause (International Abbreviated List), sex and age of residents in Dublin County Borough, remaining urban districts and aggregate rural districts	148
22	Deaths of residents of each province, county and county borough in 1991 classified by place of occurrence	160
23	Deaths of residents of each province, county and county borough in 1991 which were not medically certified, classified by age	161
24	Deaths in 1991 classified by principal groups of causes, sex and age, of residents in each county and county borough	162
25	Infant mortality – deaths at ages under 4 weeks and 4 weeks and under one year in 1991 classified by sex and cause assigned to the principal towns, other urban districts and rural districts	182
26	Infant mortality – deaths under one year in 1991 classified by sex, age and cause (International Detailed List)	184
27A	Infant mortality – deaths at ages under 4 weeks and 4 weeks and under one year in 1991 classified by sex and cause, assigned to each province	192
27B	Infant mortality – deaths at ages under 4 weeks and 4 weeks and under one year in 1991 classified by sex and cause, assigned to each county and county borough	194
28	Infant mortality – deaths of infants (born outside marriage) in 1991 classified by sex, age and cause	204
29	Late foetal deaths notified in 1991 classified by cause and age of mother at maternity	206
30	Late foetal deaths notified in 1991 classified by cause and period of gestation	209
31	Late foetal deaths notified in 1991 classified by cause and number of previous children	210
32	Late foetal deaths notified in 1991 classified by age of mother and sex and period of gestation	211
33	Late foetal deaths notified in 1991 classified by age of mother and number of previous children	211
34	Deaths showing the numbers occurring in each quarter in 1991 assigned to the counties and county boroughs	212
35	Deaths by date of occurrence in each month during 1991	214
36	Births showing the numbers in each quarter in 1991 assigned to the counties and county boroughs	216
37	Births in 1991 classified by day of occurrence and area of normal residence	217
38	Births by date of occurrence in each month during 1991	218
39	Births in 1991 in each county and county borough showing place of occurrence and areas of normal residence	220
40	Births in 1991 classified by sex and age of mother at maternity and showing the number of births outside marriage	221
41A	Total births in 1991 classified by age of mother at maternity and county of normal residence	222
41B	Births outside marriage in 1991, classified by age of mother at maternity and county of normal residence	223

Tables (contd.)

Report on Vital Statistics for the year 1991

This Report has been prepared by the Central Statistics Office for the Minister for Health in accordance with the provision of Section 2 of the Vital Statistics and Births, Deaths and Marriages Registration Act, 1952. The statistics relate to the area in Ireland exclusive of Northern Ireland. Births are classified according to the area of residence of the mother and deaths according to the area of residence of the deceased.

The number of births and deaths for each of the years 1943 to 1991 is exclusive of late registrations and the number of deaths for each of the years 1940 to 1967 is exclusive of non-residents. From 1968 however, the number of deaths includes non-residents.

The main statistics contained in this Report have already been published, and the Report consists mainly of a further breakdown and analysis of these.

More up to date information on Vital Statistics is published in the Quarterly Report on Births, Deaths and Marriages published about five months after the end of the quarter to which the data relate. In the Quarterly Report births and deaths are classified according to quarter of registration.

General Summary

Marriages: There were 17,441 marriages registered during the year 1991 compared with 17,838 in 1990. The marriage rate per 1,000 population was 4.9, compared with 5.1 for 1990.

Births: The number of births which occurred during 1991 was 52,718 – 27,122 males and 25,596 females. The birth rate was 15.0 per 1,000 population compared with 15.1 in 1990. The number of births outside marriage which occurred in 1991 was 8,912 or 16.9 per cent of all births.

Deaths: The number of deaths occurring during 1991 was 31,305, 16,603 males and 14,702 females. The death rate was 8.9 per 1,000 population. In 1990 deaths numbered 31,370 and the rate was 9.0.

Of the deaths occurring in 1991, 31.7 per cent were due to ischaemic and other forms of heart disease; 23.2 per cent to cancer; 13.9 per cent to other diseases of the circulatory system and 14.0 per cent to diseases of respiratory system.

There were 7,267 deaths from malignant neoplasms and neoplasms of lymphatic and haematopoietic tissues. Of these, 26 were caused by Hodgkin's disease and 216 by leukaemia and aleukaemia. The death rate for cancer (ICD-9 nos. 140-208) in 1991 was 2.06 per 1,000 population compared with 2.03 for 1990.

During 1991 the number of deaths of infants under one year was 401 compared with 434 in 1990 giving rates of 7.6 and 8.2 respectively per 1,000 live births.

The total number of deaths from accidents and other external causes in 1991 was 1,455 of which motor vehicle accidents accounted for 434 deaths. The corresponding figures for 1990 were 1,502 and 465 respectively.

Population: The population in April 1991 was 3,525,719 – 1,753,418 males and 1,772,301 females.

Issue of Authority for Registration: Births and deaths which have not been registered within one year of their occurrence can be registered only on the authority of An tArd Chlaraitheoir (Registrar General). The number of such births registered on the authority of An tArd Chlaraitheoir in 1990 was 1,243 and the number of such deaths registered was 351. Throughout the tables in this Report these births and deaths have been excluded. Tables containing an analysis of late death registrations in 1991 are included in the Appendix of this Report.

MARRIAGES

The number of marriages registered in 1991 was 17,441, a decrease of 397 on the previous year; the rate was 4.9 per 1,000 population, 0.2 below that for 1990. Tables 4 and 5 of this Report show the average numbers of marriages registered and marriage rates for 10-year periods since 1864 and by single years since 1981. The following table compares the marriage rate in Ireland in the years 1941 to 1991 with those in Northern Ireland, England and Wales and Scotland.

Table I Number of marriages per 1,000 population in Ireland* and neighbouring countries, 1941 – 1991

Year	Ireland*	Northern Ireland	England and Wales	Scotland
1941–1950 [†]	5.6	7.6	8.6	8.5
1951–1960 [†]	5.4	6.8	7.8	8.1
1961–1970 [†]	6.0	7.3	7.9	7.9
1971–1980 [†]	6.8	6.9	7.7	7.6
1981	6.0	6.2	7.1	7.0
1982	5.8	6.4	6.9	6.8
1983	5.6	6.5	6.9	6.8
1984	5.2	6.7	7.0	7.0
1985	5.3	6.6	6.9	7.1

1991	4.9	5.8	6.0	6.6

*Exclusive of Northern Ireland

[†]Average annual number of marriages per 1,000 population for decennial periods from 1941–1980.

Age at Marriage

Particulars of the ages of persons marrying in this country were obtained at the 1946 Census of Population. At that Census persons were asked to state their date of marriage and a special analysis was made of 14,338 marriages which had taken place in the preceding twelve months and in the case of which the husband and wife were enumerated on the same census schedule. Corresponding data have been available since 1957 from marriage registrations and the results obtained since have made possible an examination of the trends in age at marriage over the intervening period, which are summarised in the following table.

Table II Percentage distribution of marriages according to age of groom and age of bride and average age at marriage in 1945–1946 and in each year 1988–1991

Age Group	Distribution according to age of groom					Distribution according to age of bride				
	1945–46	1988	1989	1990	1991	1945–46	1988	1989	1990	1991
	Per cent									
Under 20 years	1.0	1.3	1.1	1.1	0.9	6.6	4.9	3.7	3.4	3.2
20–24 "	14.3	28.1	25.9	23.8	22.0	29.5	42.1	40.4	37.8	35.1
25–29 "	25.7	45.4	46.5	47.1	47.4	31.1	38.4	40.4	42.6	43.5
30–34 "	24.2	16.0	17.0	18.3	20.0	19.9	9.7	10.3	11.1	12.6
35–44 "	25.8	6.9	7.4	7.7	7.7	11.1	3.6	4.0	4.0	4.5
45 years and over	9.0	2.3	2.1	2.1	2.0	1.9	1.2	1.2	1.1	1.1
TOTAL	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Average Age	33.1	28.2	28.4	28.6	28.7	28.0	26.1	26.4	26.6	26.9

In 1991, the proportion of grooms and brides at ages under 25 years continued to fall while the proportion aged 25 to 34 grew. The average age at marriage has been increasing since 1984; the average age for males being 28.7 years and for females, 26.9 years in 1991. In Table 46 all marriages registered in 1991 are cross-classified by age of groom and age of bride in single years while in Table 47 similar particulars are shown for first marriages. From the latter table it may be calculated that the average ages of bachelors and spinsters marrying in 1991 were 28.4 and 26.6, respectively. A comparison of first marriage rates per 1,000 single population in each age group in Ireland and in England and Wales in 1991 is made in Table III. The figures were obtained by dividing the number of single males marrying in each group by the total number of single males in that age group and similarly for females.

Table III First marriage rates per 1,000 single population in each age group in Ireland* and England and Wales, 1991

Age groups	Bachelors		Spinsters	
	Ireland*	England and Wales	Ireland*	England and Wales
15–19 years [†]	0.9	3.4	3.4	14.0
20–24 "	29.9	42.5	54.5	74.0
25–29 "	117.0	76.5	139.0	89.4
30–34 "	97.4	64.5	86.4	62.8

45–49 "	8.2	10.8	5.3	12.0
50–54 "	3.6	7.1	2.3	7.1
55 and over	1.0	2.3	0.8	1.2
TOTAL, 15 years and over	31.6	40.4	37.4	46.9

* Exclusive of Northern Ireland

[†] 16–19 years for England and Wales

For each sex the marriage rates in Ireland were considerably below those in England and Wales in the two younger age groups. In the 25–39 year age groups the rates for both males and females in Ireland were higher than the rates in England and Wales in 1991. In the age groups 40 years and over the rates for England and Wales were significantly higher than the Irish rates.

Mode of Celebration

A total of 16,293 marriages (i.e. 93.4% of all marriages) were celebrated in accordance with the rites and ceremonies of the Catholic Church in 1991. Other marriages numbered 1,148, of which 392 were according to the rites and ceremonies of the Church of Ireland, 52 in Presbyterian Churches, 30 in Methodist Churches, 25 in accordance with the rites and ceremonies of other religious denominations and 649 by civil contract in Registrar's Office.

The rate for Catholic Marriages in 1991 was 4.9 per 1,000 of the Catholic population. The rate for all other marriages was 5.3 per 1,000 of the population other than Catholic.

Table IV Marriages registered in the years 1941 – 1991 according to the mode of celebration, and the rates per 1,000 corresponding population for Catholic and all other marriages

Year	Marriages registered other than Catholic							Catholic	Total	Rate per 1,000 corresponding population

[†] Average annual number of marriages and rates for decennial periods 1941–1980

* For 1982 to 1990, rates have been calculated from interpolated population data.

Marriages are classified according to form of ceremony, age of groom and age of bride in Tables 48 and 49. For Catholic marriages the average age of the groom was 28.6 years compared with 30.6 years for other marriages (including Civil marriages). The average age of the bride for Catholic marriages was 26.7 years and for other marriages, 28.5 years.

Socio-Economic Group

This classification is widely used in Census of Population statistics and is determined by a person's occupation or, in some cases, by a combination of occupation and employment status. The socio-economic group of a person not gainfully occupied is considered to be that of the gainfully occupied person on whom he or she is deemed to be dependent. The men and women married in 1991 were classified by socio-economic group on the basis of the information on occupation given in the marriage register. The results obtained are given in Tables 50 to 52.

In Tables 50 and 51 grooms and brides are classified by socio-economic group and age at marriage. For both grooms and brides the average marriage age in 1991 was higher in the social group "Farmers, farmers' relatives assisting and farm managers" than in any other group and the lowest average age was in the "other manual workers" group.

Table 52 shows marriages registered in 1991 classified by the social groups of groom and bride. The highest number of marriages among males occurred in the "skilled manual workers" group which accounted for 32 per cent of the grooms excluding the "not stated" cases. The highest among females was in the "Intermediate non-manual workers" group which accounted for 41 per cent of the brides. The table also gives information on the respective socio-economic groups of grooms and brides. Almost half (46%) of women in the socio-economic group "Farmers, farmers' relatives assisting and farm managers" married men in another socio-economic group. A substantial number of the women in the "Intermediate and other non-manual workers" groups married men in each of the other socio-economic groups. In the case of the majority of women in the "manual workers" groups, the husbands belonged to the same groups.

Area of Residence

Four classifications of district may be considered in relation to each marriage – namely that in which the marriage took place, the areas of residence of the bride and groom prior to marriage, and the intended future residence. In Table 45, figures for marriages according to the place of occurrence are given for 1991. A comparison between the area of residence of the bride before the ceremony and the area in which the marriage took place is made in Table V.

In Tables 53 and 54 marriages are shown classified by area of residence prior to marriage and age group of groom and bride. Confining attention to the marriages in the case of which the area of residence was within the State, it will be seen that the average age at marriage for grooms is lowest in Waterford County Borough, Offaly and Limerick County Borough, 27.6 and highest in Dun Laoghaire Rathdown 30.1. The average age for brides was lowest in Donegal, 25.7 and highest in Dun Laoghaire Rathdown, 28.1.

In Table 55 marriages are cross-classified by area of residence before marriage of groom and bride. As is to be expected, in the great majority of cases the groom and bride were from the same or neighbouring counties. A feature of the table is the large number of cases in which the address of the groom or bride or of both groom and bride were outside the State. Thus, 1,624 of the men married in the State in 1991 were returned as residing in England, Wales or Scotland, 246 in Northern Ireland and 618 in other countries. The number of brides who were resident before marriage in England, Wales or Scotland was 1,356, the number from Northern Ireland was 111 and the number from other countries was 445. In 1,753 cases both the groom and bride were from outside the State. In the past it has been the practice to compute marriage rates for counties and country boroughs by relating the marriages registered in each area to the resident population of that area.

Table V Comparisons of area in which marriage took place with area of residence of bride, 1991

Area in which registered	Total Marriages (1)	Marriages in the case of which bride was resident in		Col. (2) as percentage of Col. (1)

It will be observed that rates (a) and (b) differ on account of the fact that marriages of men whose area of residence was outside the country were included in the calculation of rate (a) and excluded from rate (b). Rate (b) includes marriages of men from the county who married outside the county. Information on intended future residence tends not to be as accurate as other details recorded in relation to marriages. There were 591 marriages registered in which no information on future residence was provided.

Table VII Percentage of marriages with future intended residence outside the State 1976 to 1991

Year (1)	Total Marriages (2)	Marriages with intended future residence abroad (3)	Col. (3) as percentage of col. (2) (4)
1976	20,580	1,454	7.1
1977	20,016	1,335	6.7
1978	21,184	1,408	6.6
1979	20,806	1,169	5.6
1980	21,792	1,203	5.5
1981	20,612	1,100	5.3
1982	20,224	1,075	5.3
1983	19,467	1,013	5.2
1984	18,513	1,149	6.2
1985	18,791	1,345	7.2
1986	18,573	1,523	8.2
1987	18,309	1,843	10.1
1988	18,174	2,914	16.0
1990	17,838	3,123	17.5
1991	17,441	2,887	16.6

Table VII shows that the proportion of marriages with intended future residence outside the State has shown a steady increase between 1984 and 1990 and a decline in 1991. In the case of 1,768 marriages the future residence was in England and Wales, 202 in Northern Ireland, 77 in Scotland, 162 in other parts of Europe, 438 in the United States of America, 53 in Canada, 132 in Australia and New Zealand and 55 elsewhere. The age distributions and average ages of the grooms and brides going to the various countries are shown in Tables 56 and 57 respectively. The marriages of persons going abroad are shown classified by socio-economic groups of groom and bride in Tables 58 and 59 respectively. By comparing Tables 50 and 58 it is possible to examine the proportions of men marrying in each socio-economic group who intended to reside outside the country, and it is found that this proportion varied considerably between the different groups. Table VIII contains the results obtained.

Table VIII Percentage of men marrying in each socio-economic group whose intended future residence was outside the state in 1990 and 1991

Socio-economic group of groom	Percentage with intended future residence outside the State	
	1990	1991
	Per Cent	
Farmers, relatives assisting and farm managers	2	3
Other agricultural occupations and fishermen	6	8
Higher professionals	38	35
Lower professionals	34	26
Employers and managers	21	19
Salaried employees	18	16
Intermediate non-manual workers	11	13
Other non-manual workers	12	11
Skilled manual workers	24	22
Other manual workers	9	10
TOTAL	18	17

A classification of marriages of persons going abroad by form of marriage ceremony, is made in Table 60. In the case of Catholic marriages the percentage with intended future residence outside the State at 17 per cent, the same as 1990. The corresponding figure for all other marriages was 18 per cent in 1990 and 17 per cent in 1991.

Finally, in Tables 61 and 62, the marriages of persons going abroad are classified by area of residence before marriage of the groom and bride respectively. The proportions which these marriages represent of the total when classified according to area of residence of groom are shown in Table IX.

Table IX Grooms from each area whose intended future residence was outside the state, shown as a percentage of the total grooms from that area, 1990 and 1991

Area of residence of groom before marriage	Percentage with intended future residence outside the State	
	1990*	1991
	Per Cent	
Dublin	7	4
Leinster	6	4
Munster	5	4
Connacht	7	6
Ulster (part of)	9	7
Outside the State	90	90

* For 1990 the area of residence for Dublin only incorporates Dublin County Borough and Dun Laoghaire Rathdown.

Births

The number of births which occurred in 1991 was 52,718 comprising 27,122 males and 25,596 females. The corresponding total for 1990 was 53,044, 27,559 males and 25,485 females. The birth rate in 1991 was 15.0 per 1,000 population, compared with 15.1 in 1990.

Table X Number of births in Ireland* and birth rates per 1,000 population in Ireland and neighbouring countries, 1941 to 1991

Period	Numbers of births (in thousands) Ireland*	Birth rate per 1,000 population

[†] Average annual number of births and birth rates for decennial periods 1941–1980.

Classification by age at maternity, parity and duration of marriage

Table 42 shows the total number of births which occurred in 1991 classified by age of mother at maternity and number of previous liveborn children. The mother's age was not stated in respect of 497 births (or 0.9% of the total). In 1990 the corresponding figures were 494 and 0.9 respectively. The results contained in Table 42 are summarised in Table XI. In preparing this table the procedure in the case of multiple births was to count each child as an individual birth. For instance if a fifth pregnancy produced twins, the children would be classified as a fifth and sixth child in parity order.

Table XI Births occurring in 1991 classified by age of mother at maternity and number of previous children

Age at maternity	Number of previous children									
	Total	0	1	2	3	4	5–9	10–14	15 and over	Not stated
Under 20 years	2,778	2,476	264	21	1	–	–	–	–	16

TOTAL	52,718	18,130	14,877	9,385	5,019	2,386	2,395	120	11	395

Between the mid 1960's and the mid 1970's there was a trend towards the younger age groups in the distribution of births according to the age of mother at maternity and by 1975 mothers under 30 years accounted for 61.7 per cent of births. Subsequently the proportion declined fairly steadily to reach 53.2 per cent in 1990 and 52.5 in 1991. The corresponding figures for England and Wales and for Scotland in 1991 were 67.9 per cent and 69.4 per cent respectively.

Table XII Percentage distribution of births according to age of mother at maternity in Ireland* in 1990 and 1991 and in England and Wales and Scotland in 1991

Age at maternity	Ireland*		England and Wales	Scotland
	1990	1991	1991	1991

Average age at maternity	29.6	29.6	27.7	27.4

* Exclusive of Northern Ireland.

The difference between this country and England and Wales and Scotland shown in Table XII is due to the fact that women in Ireland marry at a later age and have on average more children, as may be seen from Table XV. Table XIII shows the percentage distribution of first births within marriage.

Table XIII Percentage distribution of first births within marriage according to age of mother in Ireland* in 1990 and 1991 and in England, Wales and Scotland in 1991

[†]First Births of First Marriage

Table XIV compares fertility rates in Ireland, England and Wales in 1991.

Table XIV Births per 1,000 women in each age group, Ireland*, England and Wales, 1991

Age of Mother	Total Births per 1,000 women		Births (within marriage) per 1,000 married women		Births (outside marriage) per 1,000 single, widowed, divorced or separated women	
	Ireland*	England and Wales	Ireland*	England and Wales	Ireland*	England and Wales
15–19 years	17.0	33.1	436.9	264.0	15.2	28.0
20–24 "	63.4	89.6	271.4	189.2	31.7	54.4
25–29 "	130.6	119.9	220.0	172.5	25.5	56.1
30–34 "	123.2	87.0	155.1	102.3	25.5	48.7
35–39 "	62.9	32.1	73.8	33.9	15.7	26.0
40–44 "	15.1	5.1	17.3	5.0	4.6	5.4
45–49 "	0.9	0.3	1.1	0.4	0.2	0.3
Total 15–49 years	60.1	55.8	97.5	69.5	20.7	38.4

*Exclusive of Northern Ireland; rates are based on the 1991 Census of Population.

In each age group the number of births within marriage per 1,000 married women was considerably higher in Ireland than in England and Wales. In the 15–19 year age group the Irish rate in 1991 was 65 per cent above that in England and Wales, in the 20–24 year group 43 per cent greater. The number of births outside marriage per 1,000 single, widowed and divorced women was appreciably lower at all ages in Ireland than in England and Wales. On account of the much higher proportion of women married at the younger ages in England and Wales the fertility rates for all women combined were higher in England and Wales than in Ireland in the 15–19 and 20–24 year age groups but at the later ages the Irish rates were considerably higher.

The total number of births outside marriage was 8,912 being 1,145 more than in 1990. This was equivalent to an annual rate of 20.7 per 1,000 unmarried females aged 15–49 years and was 16.9 per cent of total births. The number of births outside marriage has shown an increase every year since 1959 when the lowest ever number was recorded.

The percentage distribution of births within marriage according to the number of previous children in 1990 and 1991 is shown in Table XV and a comparison made with the corresponding distributions in England and Wales and Scotland in 1991.

Table XV Percentage distribution of births within marriage according to number of previous children in Ireland* in 1990 and 1991 and in England and Wales and Scotland in 1991

Number of previous children	Ireland*		England and Wales	Scotland†
	1990	1991	1991	1991
Per Cent				
0	27.6	27.9	39.7	42.0

4	5.2	5.1	1.7	1.1
5 to 9	5.6	5.2	1.3	} 0.6
10 to 14	0.3	0.3	0.0	
15 and over	0.0	0.0	0.0	

* Exclusive of Northern Ireland.

† Includes stillbirths.

The difference between the years 1990 and 1991 in respect of the percentage distribution according to number of previous children was slight. The percentage of women with large families was considerably higher in Ireland than in England and Wales or Scotland. In Ireland in 1991, 5.5 per cent of the mothers had 5 or more previous children, the corresponding percentages being only 1.3 in England and Wales and 0.6 in Scotland.

Multiple Births

The number of maternities in 1991 which resulted in multiple live births was 592 consisting of 584 sets of twins, and 6 sets of triplets and two set of quads. This is equivalent to a "twinning rate" (number of live twins per 1,000 maternities which resulted in live births) of 11.2. Table XVI summaries the number of multiple births and the "twinning rate" for the years 1980 to 1991.

Table XVI Number of multiple births and the number of twins per 1,000 maternities 1979–1991

Year	Live births	Maternities which resulted in live issue	Twins	Triplets	Quads	Quintuplets	Twinning rate
1980	74,064	73,271	769	12	—	—	10.5
1981	72,158	71,425	719	7	—	—	10.1
1982	70,843	70,055	770	9	—	—	11.0
1983	67,117	66,352	741	12	—	—	11.2

1990	53,044	52,400	624	8	—	1	11.9
1991	52,718	52,116	584	6	2	—	11.2

DEATHS

The number of deaths which occurred during the year 1991 was 31,305 of which 16,603 were males and 14,702 were females. This is equivalent to a rate of 8.9 deaths per 1,000 total population compared to 9.0 in 1990 and 9.1 in 1989.

Table 9 shows the annual average death rates, by age group, for decennial periods from 1864 to 1980 and the death rates for each year 1981 to 1991.

While the crude death rate per 1,000 population has shown a gradual downward trend since the beginning of the century, striking falls occurred in the death rates at the younger ages.

Table XVII compares the death rates in the years 1941–1991 with those in Northern Ireland, England and Wales and Scotland. The death rate in this country in 1991 was lower than in England and Wales and Scotland. Over the period covered in the table the decrease in this country has been greater than that in any of the other areas.

These comparisons are based on *crude death rates*, which are to some extent affected by differences in the age–sex structures of the population in the different countries, while comparisons over a period of years are also affected by changes in the age–sex structures of the population.

Table XVII Death rates per 1,000 population in Ireland* and neighbouring countries, 1941–1991

Period	Number of deaths (000's) Ireland*	Death rate per 1,000 population			
		Ireland*	Northern Ireland	England and Wales	Scotland

[†]Average annual number of deaths and death rates for decennial periods from 1941–1980

Comparison between Counties

A difficulty arises when comparisons are made between the death rates in different regions of the country, as the age distribution of the population varies considerably from one county to another. Thus, if a particular county contains a large proportion of elderly persons the crude death rate per 1,000 population will be relatively high even if the health conditions in that county are better than the general average. To overcome this difficulty standardised rates are prepared. For a particular county this is done by calculating the death rate in each age group of the population in that county and then multiplying the death rate in each age group by the population in the whole country in that age group and summing the resulting products. This sum is then divided by the total population in the country at all ages to give the standardised rate for the county. See table XVIII.

In certain areas the standardised death rates differ appreciably from the crude rates, the extremes being in Dublin Belgard which had a crude death rate of 3.11 and a standardised rate of 6.37 reflecting the very young age structure in Dublin Belgard and in Leitrim where standardisation had the effect of lowering the death rate from 15.26 to 10.03 because of the comparatively old age structure in that county. The standardised rates in 1991 were lowest in Dublin Belgard, 6.37 and highest in Limerick County Borough, 10.46.

Table XVIII Crude and Standardised death rates in each Province, County and County Borough in 1991

Province, County or County Borough	Rates per 1,000 Population	
	Crude	Standardised
TOTAL	8.88	8.88
LEINSTER	7.79	8.74
Carlow	8.99	9.73
Dublin County Borough	10.41	9.38
Dublin Belgard	3.11	6.37
Dublin Fingal	4.12	7.53
Dun Laoghaire Rathdown	7.38	7.63
Kildare	6.35	9.68
Kilkenny	8.75	8.59
Laois	8.75	8.57
Longford	11.52	9.93
Louth	8.59	9.46
Meath	7.10	8.41
Offaly	8.50	8.69
Westmeath	9.68	9.87
Wexford	9.35	9.17
Wicklow	7.22	8.00
MUNSTER	9.74	9.29
Clare	9.51	8.74
Cork County Borough	8.56	8.63
Cork County	10.05	9.85
Kerry	11.25	8.97
Limerick County Borough	10.16	10.46
Limerick County	8.63	9.08
Tipperary N.R.	10.49	9.41
Tipperary S.R.	10.05	9.36
Waterford County Borough	7.51	8.59
Waterford County	10.10	9.45
CONNAUGHT	10.67	8.44
Galway County Borough	5.23	6.63
Galway County	10.23	8.37
Leitrim	15.26	10.03
Mayo	12.09	8.54
Roscommon	11.27	7.99
Sligo	11.18	8.96
ULSTER (part of)	10.59	8.93
Cavan	11.10	9.05
Donegal	10.64	8.85
Monaghan	9.92	9.00

Causes of Death

The Ninth Revision of the International Classification of Diseases, Injuries and Causes of Death (ICD-9) as recommended by the World Health Organisation came into operation on the 1st of January 1979. This replaced the Eighth Revision (ICD-8) which was used from 1968 to 1978. The Ninth Revision was used for the first time in classifying deaths by causes in the 1979 Report. To facilitate linkage with previous years all deaths in 1979 were, in addition, coded according to the Eighth Revision of the International Classification of Diseases. A cross-classification of deaths occurring in 1979 by the Eighth and Ninth Revision is contained in Tables 60-63 of the 1979 Report. As the Ninth Revision imposes certain changes in interpretation of recorded medical opinion regarding the underlying cause of death when more than one disease is mentioned on the medical certificate of Cause of Death, care should be taken in comparing deaths coded according to the Ninth Revision with those for previous years.

Injury and Poisoning:- This category now forms part of the main body of classification and deaths coded accordingly are shown in Table 19.

External Causes of Death:- The role of the E-code has changed. In the Sixth, Seventh and Eighth Revisions the E-code was considered as part of the main classification. In the Ninth Revision the E-code is treated as a supplementary classification to be used where relevant in conjunction with codes from any part of the main classification.

Table XIX Average annual number of deaths and death rates from some of the principal causes in each period 1965-67, 1970-72, 1975-77, 1980-82, 1985-87 and 1991

ICD-9 Code	Cause of death	1965-67	1970-72	1975-77	1980-82	1985-87	1991
		Average annual number					
010-018, 137	Tuberculosis	309	196	169	130	100	64
Rem. 001-139	Other infectious and parasitic diseases	188	147	127	141	127	121
140-208	Malignant Neoplasms	5,094	5,637	6,167	6,280	6,848	7,267
393-398, 410-429	Ischaemic and other forms of heart disease	11,273	10,581	11,319	11,357	11,193	9,928
Rem. 390-459	Other diseases of the circulatory system	5,892	6,428	5,974	5,285	4,883	4,282
487	Influenza	397	351	219	68	47	9
Rem. 460-519	Other diseases of the respiratory system	3,232	4,065	3,920	4,258	4,257	4,369
797	Senility	1,092	500	297	80	56	46
Rem. 001-799	Other diseases	4,551	3,889	3,772	3,674	3,664	3,788
800-999	Injury and Poisoning	1,151	1,525	1,652	1,680	1,543	1,431
	All Causes	33,179	33,319	33,616	32,953	32,526	31,305
		Average annual rates per 100,000 population					
010-018, 137	Tuberculosis	10.7	6.6	5.2	3.8	2.8	1.8
Rem. 001-139	Other infectious and parasitic diseases	6.5	4.9	3.9	4.1	3.6	3.4
140-208	Malignant Neoplasms	176.5	188.9	191.2	182.4	193.4	206.1
393-398, 410-429	Ischaemic and other forms of heart disease	390.5	354.6	350.9	330.0	316.1	281.6
Rem. 390-459	Other diseases of the circulatory system	204.1	215.4	185.2	153.6	137.9	121.5
487	Influenza	13.8	11.8	6.8	2.0	1.3	0.3
Rem. 460-519	Other diseases of the respiratory system	112.0	136.2	121.5	123.7	120.2	123.9
797	Senility	37.8	16.8	9.2	2.3	1.6	1.3
Rem. 001-799	Other diseases	157.7	130.3	116.9	106.8	103.5	107.4
800-999	Injury and Poisoning	39.9	51.1	51.2	48.8	43.6	40.6
	All Causes	1,149.4	1,116.6	1,042.1	957.5	918.5	887.9

In Table XIX the number of deaths in the various disease groups in the years prior to 1979 have been adjusted on an approximate basis for previous periods to conform to the structure of the groups under the 9th Revision of the International Classification of Diseases.

From Table XIX it can be seen that heart diseases remained the single biggest cause of death. While the number of deaths due to heart disease has fluctuated somewhat since 1965–67, the rate per 100,000 population has declined steadily. The number of deaths due to cancer increased by 34 per cent between 1965–67 and 1985–87 and there has been a further increase of 6 per cent since then. There was a significant decline in the number of deaths from influenza since 1965–67 while the number of deaths due to other respiratory diseases has increased since 1985–87.

Of the deaths occurring in 1991, 78 per cent were due to the four main causes, i.e. ischaemic and other forms of heart disease, malignant neoplasms, cerebrovascular disease and respiratory diseases. Diseases of the heart were responsible for the highest rates, 322 per 100,000 population for males and 242 per 100,000 females. Most of these deaths occurred at ages over 55. Malignant neoplasms were the next major cause, the rates for which were 223 and 189 for males and females respectively per 100,000 population. The rates for cerebrovascular disease were 70 and 99 respectively for males and females per 100,000 population; as in the case of heart diseases the greater number of these deaths occurred at ages over 55. The deaths from respiratory diseases were due mainly to pneumonia and bronchitis. Between the ages 5 to 34 years accidents were the greatest single cause.

Some of the principal causes of deaths are considered in greater detail in the following sections.

Tuberculosis

In 1991 there were 64 deaths from tuberculosis, of which 43 were caused by the respiratory form and 21 by other forms of the disease. Between the period 1941–1950 and the year 1991 death rates from tuberculosis, particularly in the younger age groups, fell to a fraction of their former level. All of the 64 deaths in 1991 were in the age group 25 and over.

The mortality from tuberculosis in the counties and county boroughs in 1991 is compared in Table 12 of this Report.

Table XXI Number of deaths and death rates per 1,000 population from Tuberculosis of the Respiratory System and from all other forms of Tuberculosis, 1941 – 1991

Period	Tuberculosis of the respiratory system		Other forms of tuberculosis		Ratio of male to female mortality

*Average annual number of deaths and death rates for decennial periods from 1941–1980.

Cancer

Prior to 1950 under the Fifth Revision of the International List of Causes of Death, cancer deaths were those classified under codes 045–055. With the introduction of the Sixth Revision in 1950 the World Health Organisation recommended that total cancer deaths should be based upon Nos. 140–205 (Nos.140–208 in the Ninth Revision) of the International Statistical classification which now includes Hodgkin's disease and leukaemia. Thus, for comparability with the years prior to 1950 the total cancer figure less Hodgkin's disease and leukaemia should also be shown. In 1991 there were 7,267 deaths from cancer (Nos.140 to 208). Of this number 26 deaths were caused by Hodgkin's disease and 216 by leukaemia and aleukaemia. Table XXII shows the death rate from cancer in certain age groups in the years 1980 to 1991.

Table XXII Deaths from Cancer (Nos.140–208) classified by sex and age per 100,000 population at the same ages, 1980 – 1991

Year	Age Group (years)							Total
	Under 25	25–34	35–44	45–54	55–64	65–74	75 and over

1990	4	15	50	173	398	709	1,348	186
1991	4	15	61	176	396	723	1,365	189

In the years under review the death rates from cancer showed little difference between males and females in the age groups under 34 years but between the ages 35 and 54 years the female rates were generally greater than those for males. In 1991 the male death rate for all ages was 18 per cent above that for females.

Table XXIII Deaths from Cancer (nos. 140–208) per 1,000 population in Ireland* and neighbouring countries, 1980 – 1991

Year	Ireland*	Northern Ireland	England and Wales	Scotland
1980	1.85	1.94	2.62	2.66
1981	1.81	1.86	2.62	2.71
1982	1.82	1.99	2.63	2.72

1989	2.09	2.21	2.84	2.93
1990	2.03	2.20	2.80	2.93
1991	2.06	2.18	2.81	2.98

*Exclusive of Northern Ireland.

In the period under review the crude rates for England and Wales and Scotland were consistently higher than those for this country and Northern Ireland. The death rates from cancer in 1991 in counties and county boroughs are compared in Table XXIV. Standardised rates, which eliminate the effect of different age distributions in the different areas, are also shown.

Table XXIV Death rates (Crude and Standardised) from Cancer (ICD-9 nos. 140-208) in each Province, County and County Borough in 1991

The crude death rate from cancer in 1991 varied from 2.82 per 1,000 population in Dublin County Borough to 0.82 in Dublin Belgard. When comparing the relative seriousness of mortality in different counties it is, of course, the standardised rates which should be used. In the counties of the west and north-west, standardisation had the effect of lowering the death rates considerably. The standardised rates varied from 2.53 per 1,000 population in Dublin County Borough to 1.60 in Dublin Belgard.

Full details of deaths due to cancer occurring in 1991, classified by site of the disease and age group are contained in Table 19. The number of deaths and death rates from cancer per 100,000 in each group for the main groups of sites are shown in Table XXV and it will be observed that there is in general a rapid rise in the death rate with increasing age. Deaths due to malignant neoplasms of the digestive system represented one third of the total cancer deaths for males and females respectively the death rate for males being 24 per cent higher than that for females. The death rate from malignant neoplasms of the respiratory system for males was more than double that for females.

Cancer of the Bronchus, Trachea and Lung

The number of deaths and death rates from cancer of the bronchus, trachea and lung in each year 1979 to 1991, classified by sex and age group, are shown in Table XXVI.

Table XXVI Deaths and death rates per 100,000 corresponding population in each year 1979 to 1991 from Cancer of the Bronchus, Trachea and Lung, classified by sex and age group

1991	-	6.0	35.4	144.3	424.8	57.7	-	2.6	16.0	62.9	148.0	26.0

The main point that emerges from this table is that whereas, deaths from cancer of the bronchus, trachea and lung are much more common among males than among females, the figures indicate an increasing incidence of female deaths up to 1989. Since 1989 the female rate has declined. In 1979 the death rate in the case of males was 57.3 compared with 20.4 in the case of females. In 1991 the corresponding rates were 57.7 and 26.0 respectively.

The following table shows deaths and death rates from cancer of the bronchus, trachea and lung in Ireland and neighbouring countries during the years 1986 to 1991.

Table XXVII Deaths and death rates in Ireland* and neighbouring countries from Cancer of the bronchus, trachea and lung in each year 1986 to 1991

Diseases of the Circulatory System

There were 14,210 deaths ascribed to diseases of the circulatory system (Nos. 390–459) in 1991, of which 7,502 were deaths of males and 6,708 of females. Details of these deaths, classified by cause and age may be obtained from Table 19 of this report while the numbers assigned to each county and county borough are shown in Table 20. Deaths and death rates from certain groups of causes are given in Table XXIX.

The excess of male over female deaths in the case of diseases of the circulatory system is largely accounted for by the greater number of deaths of males from ischaemic heart disease (4,765 males compared with 3,171 females) followed by acute myocardial infarction (3,597 males and 2,370 females). In the case of deaths due to cerebrovascular disease there was an excess of female deaths (1,753 females compared with 1,222 males); in respect of the remaining groups of causes the difference between the male and female death rates is not nearly so pronounced.

Table XXVIII Deaths from diseases of the Circulatory System in 1991 showing the numbers and percentages not medically certified

Respiratory Diseases

Deaths from respiratory diseases (Nos. 460–519 in the International List) in 1991 numbered 4,378. These included 2,031 deaths by pneumonia, 297 by bronchitis, 9 by influenza and 2,041 due to other respiratory diseases.

Pregnancy, Childbirth and Puerperium

There were three maternal deaths in 1991, compared to two in 1990. The death rate was 0.06 per 1,000 maternities. Table XXX shows the maternal deaths in 1991 classified by age of mother and cause and also deaths associated with pregnancy, childbirth and puerperium, but not classified as maternal.

Infant and Late Foetal Mortality

The terms used in relation to infant and late foetal mortality are defined as follows:

Infant death: Death at ages under 1 year of live born infant.

Early neo-natal death: Death at ages under 1 week of live born infant.

Neo-natal death: Death at ages under 4 weeks of live born infant.

Post-neo-natal death: Death between the ages of 4 weeks and 1 year of live born infant.

Late foetal death (stillbirth): Foetal death at or over 28 weeks gestation.

Perinatal deaths: Late foetal plus early neo-natal deaths.

Infant mortality rate: Infant deaths divided by total live births, multiplied by 1,000.

Neo-natal mortality rate: Neo-natal deaths divided by total live births, multiplied by 1,000.

Early neo-natal mortality rate: Early neo-natal deaths divided by total live births, multiplied by 1,000.

Late foetal mortality rate: Late foetal deaths divided by total live births plus late foetal deaths, multiplied by 1,000.

Perinatal mortality rate: Perinatal deaths divided by total live births plus late foetal deaths, multiplied by 1,000.

While statistics of infant mortality are obtained in the course of the usual procedure for registration of deaths, which has been in operation since the year 1863, particulars of late foetal mortality have been obtained through a scheme of notification to the Directors of Community Care. The scheme of notifying late foetal deaths was introduced in 1957, but comparisons between different areas of the country showed marked differences in the coverage of the scheme in the early years. Consequently, the number of late foetal deaths in the early years of the scheme is believed to be understated.

It will be seen from Table XXXII that the highest individual rate for infant mortality was in Carlow and the lowest in Roscommon. The rate for perinatal mortality was highest in Tipperary S.R. and Donegal and lowest in Clare County while for late foetal mortality the highest rate was in Tipperary S.R. and lowest in Leitrim.

Infant Mortality

During the year 1991 there were 401 deaths of infants under one year, compared to 434 in 1990. The infant mortality rate which continued to decline over the years to 8.8 in 1985 has fluctuated slightly since then, the rate declining to 7.6 in 1991.

Table XXXIII Infant mortality by age, 1941 to 1991

Period	Deaths per 1,000 births at ages											
	Under 24 hours	1-6 days	7-13 days	14-20 days	21 days and under 4 weeks	Total under 4 weeks	4 weeks and under 2 months	2 months and under 3 months	3 months and under 6 months	6 months and under 12 months	Total 4 weeks to 1 year	Total under 1 year

*Exclusive of Northern Ireland

The causes of deaths of infants under one year, classified according to the Detailed International List, are shown in Table 19. In Table 26 infant deaths are again classified by cause and a more detailed age classification shown. These results are summarised in Table XXXV.

It will be seen that the relative importance of the various groups of causes differ appreciably between deaths at certain ages under one week and deaths at ages 4 weeks to 1 year. Of all deaths at ages under one week, 50 per cent were due to congenital anomalies, anoxic and hypoxic conditions not elsewhere classified accounted for 11 per cent, immaturity and birth injuries 1 per cent.

Table XXXV Late Foetal deaths and deaths of infants under 1 year occurring in 1991 classified by cause and age

ICD-9 Codes	Cause of Death	Late Foetal deaths	Deaths of infants under 1 year				
			Under 1 day	1 day to 1 week	1 week to 4 weeks	4 weeks to 1 year	Total under 1 year

Late Foetal Deaths

The number of late foetal deaths notified in each year since the scheme was introduced is as follows:

Year	Late Foetal Deaths
Average 1957-1966	1,215
Average 1967-1976	875
Average 1977-1986	607
1987	416
1988	386
1989	330
1990	327
1991	301

The causes of late foetal deaths notified in 1991 classified according to the Detailed International List are given in Table 29. The results are summarised in Table XXXVI

Table XXXVI Late Foetal deaths and rates* per 1,000 births by cause, 1991

ICD-9 Codes 740-779	Cause of death	Number of Late Foetal deaths	Rate per 1,000 total births
740	Anencephalus and similar anomalies	19	0.36
742	Other congenital anomalies of nervous system	7	0.13
743	Congenital anomalies of eye	1	0.02
745	Bulbus cordis anomalies and anomalies of cardiac septal closure	1	0.02
753	Congenital anomalies of urinary system	1	0.02
756	Other congenital musculoskeletal anomalies	3	0.06
759	Other and unspecified congenital anomalies	8	0.15
760	Fetus or newborn affected by maternal conditions which may be unrelated to present pregnancy	2	0.04
762	Fetus or newborn affected by complications of placenta, cord and membranes	113	2.14
763	Fetus or newborn affected by other complications of labour and delivery	1	0.02
764	Slow foetal growth and foetal malnutrition	3	0.06
765	Disorders relating to short gestation and unspecified low birthweight	1	0.02
768	Intrauterine hypoxia and birth asphyxia	56	1.06
770	Other respiratory conditions of fetus and newborn	1	0.02
772	foetal and neo-natal haemorrhage	2	0.04
773	Haemolytic disease of fetus or newborn due to isoimmunization	1	0.02
778	Conditions involving the integument and temperature regulation of fetus and newborn	1	0.02
779	Other and ill-defined conditions originating in the perinatal period	80	1.52
TOTAL		301	5.71

* For definition see page 38

Deaths classified as being due to placental and cord injuries to fetus accounted for over one third (38%) of late foetal deaths. Deaths classified as being due to ill-defined conditions originating in the perinatal period accounted for 27 per cent of the total late foetal deaths, deaths due to intrauterine hypoxia and birth asphyxia were next at 19 per cent and congenital anomalies 13 per cent.

As can be seen from Table XXXVII 292 late foetal deaths in 1991 occurred in hospitals; this is equivalent to 97 per cent of the total number of late foetal deaths

Table XXXVII Late Foetal deaths notified in the year 1991 classified by period of gestation and place in which confinement occurred

Period of gestation	Place of confinement			
	Hospital	Maternity	Domiciliary	Total
28–36 Weeks	149	3	1	153
37 Weeks and over	143	2	3	148
TOTAL	292	5	4	301

The perinatal and late foetal mortality rates in Ireland and neighbouring countries from 1980 to 1991 compare as follows:

Table XXXVIII Perinatal and Late Foetal mortality rates* in Ireland[†] and neighbouring countries, 1980–1991

Year	Late Foetal mortality rate				Perinatal mortality rate			
	Ireland [†]	Northern Ireland	England and Wales	Scotland	Ireland [†]	Northern Ireland	England and Wales	Scotland

Accidents, Poisoning and Violence

The number of deaths from external causes (numbers E800–E999) occurring in 1991 was 1,455 of which 1,025 were males and 430 were females. The corresponding figures for 1990 were 1,502, 1,009 and 493 respectively. As has been mentioned on page 9 deaths which have not been registered within one year of their occurrence have been excluded from the main body of this report. The exclusion of these cases may have a relatively more significant effect on the number of deaths classified to some external causes.

Table XXXIX Deaths from accidents, poisoning and violence, 1982 – 1991

ICD – 9 code	Cause of Death	1982	1983	1984	1985	1986	1987	1988	1989	1990	1991

As can be seen from Table XL there is an excess of male mortality from accidents at all ages between 1 and 75 years. In these age groups, the excess of male deaths may be largely attributed to the category road vehicle accidents, followed by suicide and self-inflicted injury. At ages over 75 years, the excess of female deaths may be attributed to accidental falls. The vast majority of these falls occurred in the home (Table XLI).

253 deaths resulted from accidents in the home, Table XLI, compared with 283 in 1990. 119 of these deaths were accidental falls, of which 67 per cent were in the 75 years and over age category. Accidents caused by fire and flames accounted for 57 deaths, 4 of which were in the 1–4 age group. There were 25 deaths from accidental poisoning, all of which were persons aged 15 years and over.

Uncertified Deaths

The number of cases in 1991 in which the cause of death was not certified by a medical practitioner was 6 which represents 0.02 per cent of the total deaths. In Table 23 uncertified deaths in 1991 are shown classified by county and age group, while the percentage of deaths uncertified in each county is also shown. Table XLII compares the percentages of deaths uncertified in each province for a number of years.

Table XLII **Uncertified deaths as a percentage of the total in each Province, 1941–1991**

Province	1951–60	1961–70	1971–80	1981–86	1987	1988	1989	1990	1991
Leinster	3.1	1.0	0.3	0.0	0.0	0.0	0.0	0.0	0.03
Munster	8.1	2.9	0.4	0.0	0.0	0.0	0.0	0.0	0.01
Connacht	20.0	8.1	1.9	0.2	0.0	0.1	0.0	0.1	0.00
Ulster (part of)	13.8	4.7	0.9	0.1	0.0	0.0	0.0	0.0	0.00
TOTAL	8.5	3.1	0.6	0.1	0.0	0.0	0.0	0.0	0.02

Table XLIII **Percentage of deaths uncertified by age groups in each Province in 1991**

Province	All ages	Under 35	35–44	45–54	55–64	65–74	75 and over
Leinster	0.03	0.00	0.00	0.00	0.06	0.05	0.03
Munster	0.01	0.00	0.00	0.00	0.00	0.00	0.02
Connacht	0.00	0.00	0.00	0.00	0.00	0.00	0.00
Ulster (part of)	0.00	0.00	0.00	0.00	0.00	0.00	0.00
TOTAL	0.02	0.00	0.00	0.00	0.03	0.03	0.02
Actual number of deaths uncertified	6	–	–	–	1	2	3

The proportion of deaths uncertified was highest in the age group 75 years and over; this age group accounted for 50 per cent of the uncertified deaths.

Inquests and Post-mortems

The number of deaths registered on certificates issued by coroners as the result of inquest and post-mortem examinations during 1991 was 3,411 compared with 3,529 in 1990.

Tables

Table 19 (contd.) – Deaths in 91 classified by cause (International detailed)

Detailed I.C.D. – 9 code	Cause of death		Age at									
			All Ages	Under 1 Year	1	2	3	4	Total under 5	5–9	10–14	
733	Other disorders of bone and cartilage	M	2	–	–	–	–	–	–	–	–	–
		F	14	–	–	–	–	–	–	–	–	–
737	Curvature of spine	M	3	–	–	–	–	–	–	–	–	–
		F	4	–	–	–	–	–	–	–	–	–
738	Other acquired deformity	M	2	–	–	–	–	–	–	–	–	–
		F	1	–	–	–	–	–	–	–	–	–
740–759	14. Congenital anomalies	M	148	104	2	3	2	2	113	5	4	
		F	114	73	2	1	2	2	80	3	4	
740	Anencephalus and similar anomalies	M	6	6	–	–	–	–	6	–	–	
		F	6	6	–	–	–	–	6	–	–	
741.0	Spina Bifida with Hydrocephalus	M	4	3	–	–	–	–	3	1	–	
		F	4	1	–	–	–	–	1	2	1	
741.9	Spina Bifida without mention of Hydrocephalus	M	4	4	–	–	–	–	4	–	–	
		F	3	2	–	–	–	–	2	–	1	
742	Other congenital anomalies of Nervous System	M	14	9	–	–	1	–	10	2	1	
		F	6	3	–	–	–	–	3	1	–	
742.3	Congenital Hydrocephalus	M	5	3	–	–	–	–	3	1	–	
		F	3	2	–	–	–	–	2	1	–	
745	Bulbus Cordis anomalies and anomalies of Cardiac Septal Closure	M	17	9	1	1	–	1	12	1	–	
		F	17	9	–	–	–	1	10	–	1	
746	Other congenital anomalies of Heart	M	30	21	–	2	–	1	24	1	1	
		F	16	10	1	–	2	–	13	–	–	
747	Other congenital anomalies of Circulatory System	M	16	8	–	–	–	–	8	–	1	
		F	7	–	1	–	–	–	1	–	–	
748	Congenital anomalies of Respiratory System	M	9	9	–	–	–	–	9	–	–	
		F	11	11	–	–	–	–	11	–	–	
750	Other congenital anomalies of Upper Alimentary Tract	M	1	1	–	–	–	–	1	–	–	
		F	–	–	–	–	–	–	–	–	–	
751	Other congenital anomalies of Digestive System	M	2	2	–	–	–	–	2	–	–	
		F	–	–	–	–	–	–	–	–	–	
753	Congenital anomalies of Urinary System	M	10	6	1	–	–	–	7	–	–	
		F	4	1	–	–	–	–	1	–	–	
754	Certain congenital Musculoskeletal Deformities	M	1	–	–	–	–	–	–	–	–	
		F	3	1	–	–	–	–	1	–	–	
756	Other congenital Musculoskeletal anomalies	M	13	12	–	–	–	–	12	–	–	
		F	12	11	–	–	–	–	11	–	–	
757	Congenital anomalies of the Integument	M	1	1	–	–	–	–	1	–	–	
		F	2	–	–	–	–	–	–	–	1	
758	Chromosomal Anomalies	M	15	9	–	–	1	–	10	–	1	
		F	17	12	–	1	–	1	14	–	–	
759	Other and unspecified congenital anomalies	M	5	4	–	–	–	–	4	–	–	
		F	6	6	–	–	–	–	6	–	–	
760–779	15. Certain conditions originating in the Perinatal period	M	67	67	–	–	–	–	67	–	–	
		F	51	51	–	–	–	–	51	–	–	
760	Fetus or newborn affected by maternal conditions which may be unrelated to present pregnancy	M	1	1	–	–	–	–	1	–	–	
		F	1	1	–	–	–	–	1	–	–	
761	Fetus or newborn affected by maternal complications of pregnancy	M	1	1	–	–	–	–	1	–	–	
		F	1	1	–	–	–	–	1	–	–	
762	Fetus or newborn affected by complications of placenta, cord and membranes	M	3	3	–	–	–	–	3	–	–	
		F	4	4	–	–	–	–	4	–	–	
764	Slow fetal growth and fetal malnutrition	M	2	2	–	–	–	–	2	–	–	
		F	1	1	–	–	–	–	1	–	–

Table 19a Deaths from External Causes in 1991 Classified by the Nature of the Injury or Poisoning and by sex

I.C.D. - 9 code	External Cause of Death	I.C.D. - 9 code	Nature of Injury or Poisoning	Number of Deaths	
	Description		Description	Males	Females
E802	Railway Accident involving derailment without antecedent collision	431	Intracerebral Haemorrhage	-	1
E806	Other specified railway accident	803	Other and unqualified skull fractures	1	-
E807	Railway accident of unspecified nature	854	Intracranial injury of other and unspecified nature	1	-
E810	Motor vehicle traffic accident involving collision with train	803	Other and unqualified skull fractures	-	1
E812	Other motor vehicle traffic accident involving collision with another motor vehicle	415	Acute pulmonary heart disease	1	-
		801	Fracture of base of skull	1	-
		803	Other and unqualified skull fractures	19	6
		806	Fracture of vertebral column with spinal cord lesion	1	-
		807	Fracture of rib(s), sternum, larynx and trachea	4	3
		809	Ill-defined fractures of trunk	1	-
		828	Multiple fractures involving both lower limbs, lower with upper limb and lower limb(s) with rib(s) and sternum	-	1
		829	Fracture of unspecified bones	1	-
		839	Other, multiple and ill-defined dislocations	1	-
		851	Cerebral laceration and contusion	2	-
		852	Subarachnoid, subdural and extradural haemorrhage, following injury	-	1
		854	Intracranial injury of other and unspecified nature	13	8
		860	Traumatic pneumothorax and haemothorax	1	-
		861	Injury to heart and lung	1	1
		862	Injury to other and unspecified intrathoracic organs	5	4
		864	Injury to liver	2	2
		865	Injury to spleen	-	1
		869	Internal injury to unspecified or ill-defined organs	47	25
		879	Open wound of other unspecified sites, except limbs	-	1
		901	Injury to blood vessels of thorax	4	-
952	Spinal cord lesion without evidence of spinal bone injury	1	-
