

Employment in Construction Index
(Base year 2000=100)

Index of Employment in Construction

April 2008 (Provisional)
March 2008 (Final)

Employment in Construction
(Base year 2000=100)

	Monthly Index
April 2007	109.1
April 2008	94.0
% annual change	-13.8%

Numbers employed down 13.8% in April

Employment in private firms (with five or more persons engaged) in the construction industry decreased by 13.8% in April 2008 by comparison with April 2007. The monthly employment index decreased from 109.1 in April 2007 to 94.0 in April 2008. *See Table 1.*

The final figure for March 2008 showed a decrease of 12.4% when compared with March 2007. *See Table 1.*

This data series is available on the CSO's data dissemination service. See www.cso.ie and go to Database Direct.

This inquiry covers private firms with five or more persons employed.

¹ Private firms with 5 or more persons engaged² Revised³ Provisional

Background Notes

Scope and Background

This series of monthly indices is based on trends shown by a monthly employment sample inquiry covering approximately 1,000 private building and construction firms with 5 or more persons engaged; i.e. firms classified to division 45 of the NACE Industrial Classification of Economic Activity in the European Communities (NACE Rev.1.1).

This series is also available using the interactive tables in Database Direct on www.cso.ie.

Definition of Persons Engaged

The number of persons engaged is defined to include proprietors and family members working in the firm, employees (operatives, managerial, technical and clerical staff) and persons working for the firms on a labour-only subcontract basis. The number of persons in the latter category is not always known to the respondent firms and this influences the accuracy of the index.

Methodology

Respondent firms to the monthly sample inquiry are classified into three size categories, namely 5-19, 20-99 and 100 or more persons engaged. The percentage changes in employment levels for the current month over the same month in the previous year, derived from matched samples of respondents in each of these three size categories, are weighted together to give an overall percentage change. This annual change is applied to the index for the corresponding month of the previous year to give the index for the current month.
