

County Incomes and Regional GDP 2000

Index values of Disposable Income per person, 1999 - 2000

Household Income

Indices of Disposable Income per person

(Base: State=100)

Region	1999	2000
Border, Midland and Western	89.3	89.9
Border	89.4	89.2
Midland	84.4	85.8
West	92.1	92.9
Southern and Eastern	103.8	103.6
Dublin	117.1	116.8
Mid East	99.9	98.5
Mid West	98.5	98.4
South East	88.3	89.4
South West	94.6	94.3
State	100.0	100.0

Average Income highest in Dublin Region but gap has narrowed

In 2000 the disposable income per person in the *Southern and Eastern* region was 3.6% above the State average while the corresponding figure in the *Border Midland and Western* NUTS 2 region was 10.1% below the State average. The gap of 13.7 points between the two regions represents a small decrease on the gap of 14.5 points in 1999.

The Dublin region had the highest disposable income per person of the eight regional authority areas, being 16.8% above the State average in 2000. This was slightly lower than in 1999, when it was more than 17% above the average.

The disposable income per person of the Midland region was 14.2% below the State average in 2000 and was the lowest of the eight Regional Authority Areas. In 1999, the average for this region was 15.6% below the level for the State.

At county level, counties other than Dublin with high levels of disposable income per person were Kildare (105.2% of the State average), Limerick (102.6%), Galway (99.1%), Waterford (97.4%) and Cork (97.2%). At the lower end of the scale there were 14 counties with disposable incomes per person below 90% of the State average.

Data are provided at regional and county level. However, the county data should be regarded more as indicative information and not accurate absolute estimates.

Differences from cash income

These estimates allocate to regions and counties the various components of income for the household sector as compiled in the National Accounts.

Household Income includes

- Wages and salaries (including employers' contributions to social insurance and pension funds and imputed pension contributions by the state for its employees)
- Income from self employment
- Transfer payments from the State; these include the imputed value of some non-cash benefits, which accrue to households such as secondary and university education, free drugs and free fuel and transport for the elderly.

It also includes, in conformity with the definition of income in the National Accounts, the imputed value of own farm consumption and income in kind, as well as the imputed rent of owner occupied dwellings (i.e. the estimated rent that the occupier, as a tenant, would pay if the dwelling were rented). Household income on this national accounting basis is therefore not the same as the cash income that accrues to private households.

Regional GDP

(Note: GDP and GVA are the same concept i.e. they measure the value of the goods and services (or part thereof) which are produced within a region or country. GDP is valued at market prices and hence includes the taxes charged and excludes the values of subsidies provided. GVA at basic prices on the other hand excludes product taxes and includes product subsidies – see table 18).

Slower increase in output per person in Border, Midland and Western Region

The average output level per person in the *Southern and Eastern* region, as measured by gross value added was just over 10% above the State average in 2000. The level of GVA per person in the Southern and Eastern region increased by 85% from €14,318 in 1995 to €26,535 in 2000 whereas the GVA per person in the Border Midland and Western region increased somewhat less, i.e. by 75% (from €9,901 to €17,338) in the same period.

The gross value added per person in the *Border, Midland and Western* NUTS2 region was 71.9% of the State average in 2000, a slight increase on the 1999 level but a decline from the high of 77% of the State average in 1996 (see Table 14). However, when measured against the EU average it has increased over the same period due to the strong growth in Irish GDP relative to that of other countries and stands at 82.7% in respect of 2000 (see Table 15).

At the NUTS3 regional level, the combined *Dublin* and *Mid East* regions produced the highest GVA per person in 2000 at 19.4% above the State average. The level of GVA per person in this region has exceeded the State average by at least 19% in each year since 1995. It is more meaningful to combine the *Dublin* and *Mid East* regions as they are affected by workers living in one region and commuting to work in the other.

The *South West* region had the second highest GVA per person in 2000 at 16.8% above the State average. Meanwhile the *Midland* and *West* regions continue to have the lowest GVA per person in 2000 at 70.3% and 71.6% of the State average respectively.

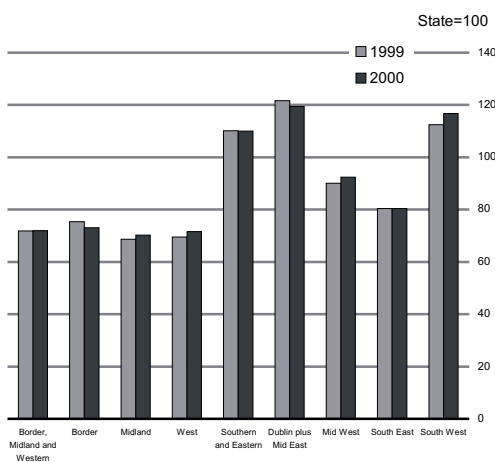

Gross Value Added is not a measure of household income. It is a measure of the value of goods and services produced in a region. (See Background Notes).

Indices of GVA per person

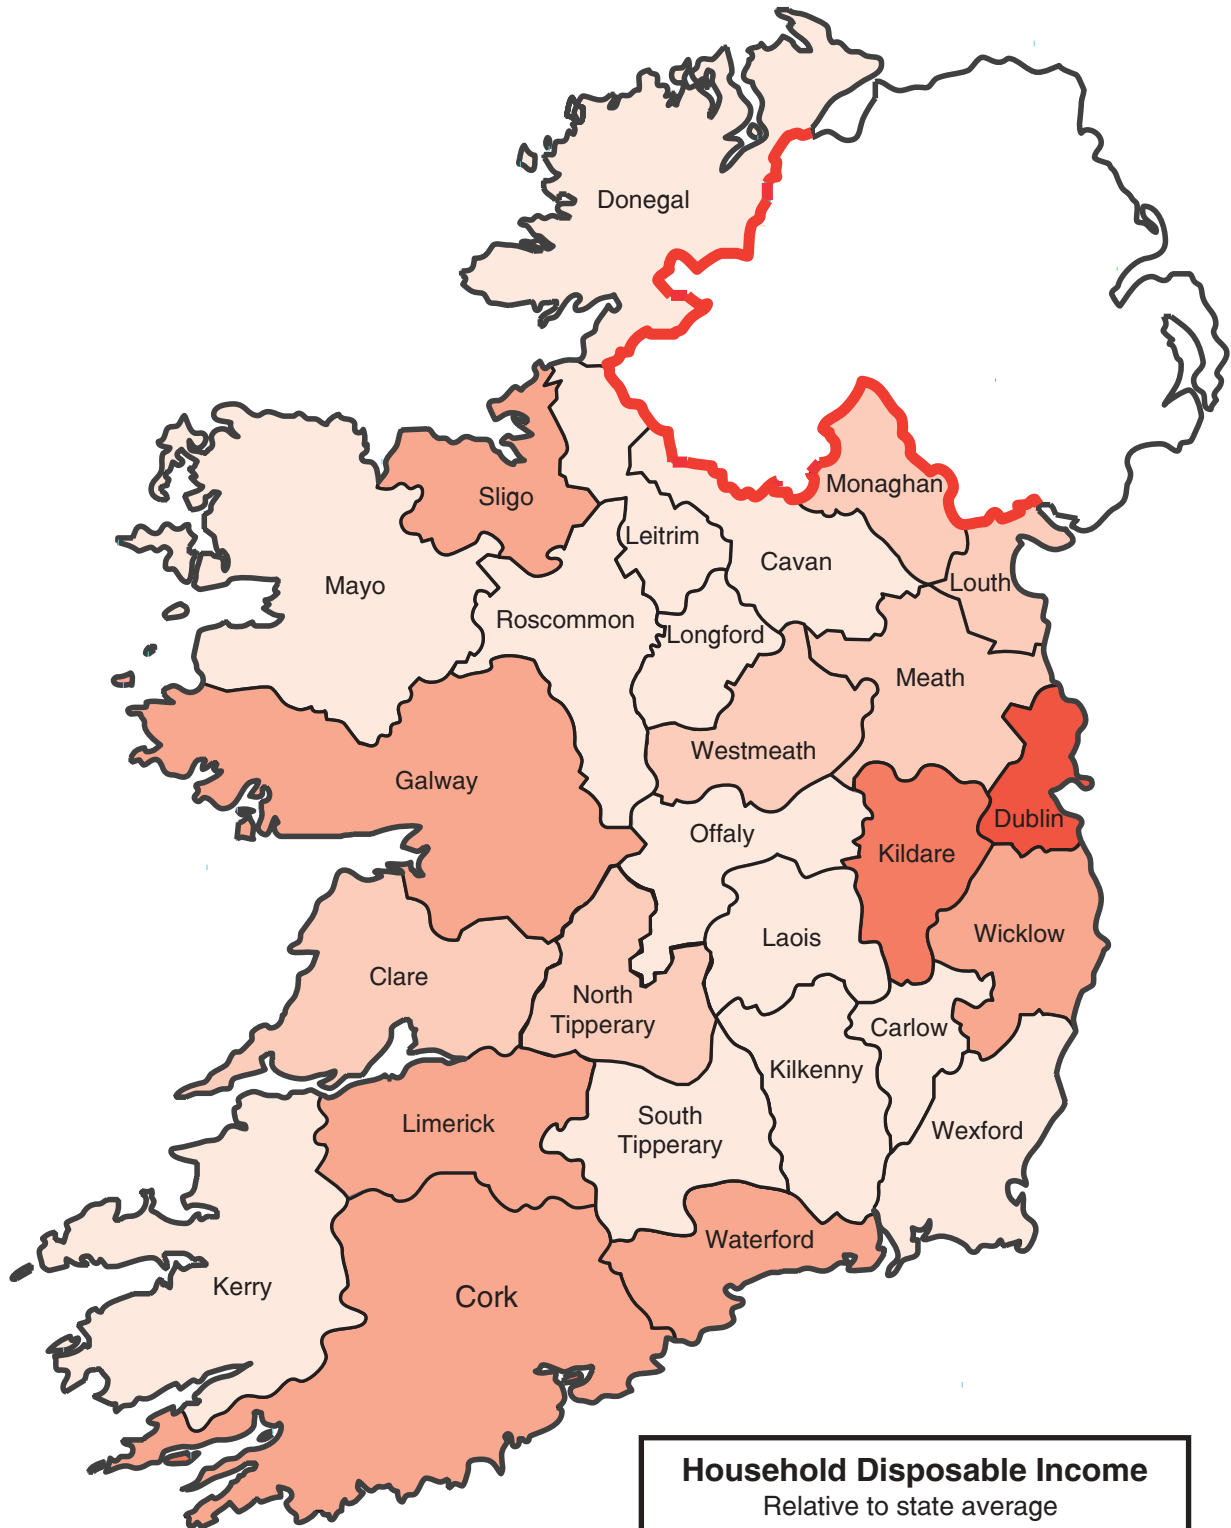

(Base: State=100)

Region	1999	2000
Border, Midland and Western	71.8	71.9
Border	75.4	73.1
Midland	68.6	70.3

¹ Total GVA does not equal the sum of the three sectors shown due to the effect of the Statistical Discrepancy - see Background Notes

Background Notes

Introduction Household incomes were first published in 2000 (Household Incomes Regions and Counties 1991-1997 – Pn 8218) and the publication included a detailed description of the methodology used to estimate the regional values of the income components. Results in respect of 1998 and 1999 which included revisions to the earlier years were published in May 2001 (Pn 9907) and January 2002 respectively.

Regional accounts were first published in 1996 (Regional Accounts 1991 – Pn 3232). They were in respect of 1991 and a full description of the methodology used was included. A further set of accounts in respect of 1993 was published in 1997 with some additional methodological details. Results have been published annually since.

The estimates of agricultural incomes are mainly provided by the Agricultural statistics division within the CSO. A release on Gross Value added (GVA) in Agriculture by NUTS 2 regions is now published separately, the latest release being that of 21 November 2002. The GVA in that release at basic prices is lower than the National Accounts estimates used here, largely due to a different treatment of subsidies in the two sets of accounts. The differences vary from €42m in 1995 to €162m in 2000.

Household Income

Primary Income Household *Primary Income* is defined for National Income purposes as follows:

Income of self employed

plus

Compensation of employees

(i.e. Wages and Salaries, Benefits in kind, Employers' social insurance contribution)

plus

Rent of dwellings

(including imputed rent of owner-occupied dwellings)

plus

Net interest and dividends

The last component is a net item, which implies that payments by households of interest are deducted in deriving primary income.

Total Income Total income is defined as:

Primary income

plus

Social benefits

plus

Other current transfers

Disposable Income Disposable income is defined as follows:

Total income

minus

Current taxes on income

(i.e. Income taxes, other current taxes)

minus

Social insurance contributions

(i.e. Employers', employees', self employed, etc.)

National Income The estimates for the State for the different components of household income have already been published in the National Income and Expenditure Report 2001 (NIE 2001). The *other current transfer payments* to and from households are included in this household income report on a net basis with *social benefits*.

Item	2000 Value €m	Source (NIE 2001)
Primary Income		
Income of self employed	9,509	Items 1 & 5, Table 1
Rent of dwellings (incl. imputed rent)	5,146	Item 7, Table 1
Remuneration of employees	41,911	Items 2,3,9 and 10, Table 1 Plus row 4, Table 12
Net interest and dividends	2,677	Row 9, Table 12 minus Item 7, Table 1
Social benefits and net current transfers		
Statistical discrepancy	-307	Item 122, Table 9 Item 12
Total Income	68,905	Item 125, Table 9
Taxes on personal income and wealth		
Income tax (incl. surtax)	8,906	Table 22
Motor vehicle duties (household part)	273	Table 22
Other taxes	3	Table 22
Training and employment levy	167	Table 22
Income Levy	0	Table 22
Social Insurance contribution	4,298	Item 168, Table 19
Total taxes on income	13,647	Item 127, Table 9

Per Capita Incomes The CSO publishes population estimates at regional level annually but not at county level. County populations for 1997 to 2000 have been estimated by applying the year to year changes at regional level shown in the 1997 Labour Force Survey and 1998, 1999 and 2000 (Q2) Quarterly National Household Survey figures to the 1996 Census of Population county populations within each region.

Statistical Discrepancy The official level of GDP is taken to be the average of the independently compiled Income and Expenditure estimates. The resulting balancing item which is half of the difference between the two estimates is called the Statistical Discrepancy. This must be added to the income components in Tables 5–10 to derive Total Household Income.

GDP by Region

Gross Value Added Gross Value Added at *basic prices* is a measure of the value of the goods and services produced in a region (less the materials and services used which come from outside the region) priced at the value which the producers received minus any taxes payable and plus any subsidies receivable as a consequence of their production or sale. GVA differs from household income in three main respects. Firstly, GVA includes the total profits of companies. Company profits arising in the State, which accrue to non-residents, are considerable. Secondly, the workforce that produces the GVA in a region may not live there and may bring their incomes home to a neighbouring region. Thirdly, personal income includes items such as social welfare benefits and factor incomes from abroad, which are not included in GVA.

Valuation Value added is firstly calculated at *factor cost*, which includes all subsidies and excludes all taxes. Conversion to a valuation at *basic prices* is achieved by subtracting *overhead* subsidies and adding *overhead* taxes. Conversion to *market prices* is then obtained by adding *product* taxes and subtracting *product* subsidies (see Table 18). The results in this release are based on the ESA95 system of accounts which is now in use throughout the European Union. Results provided in earlier releases (up to *GDP by region 1997*) were based on the ESA79 system of accounts. GVA is one of the principal concepts used in deciding eligibility for structural funds.

Statistical Discrepancy	The official level of GDP is taken to be the average of the independently compiled Income and Expenditure estimates. The resulting balancing item which is half of the difference between the two estimates is called the Statistical Discrepancy. This must be added to the income components in Tables 19 and 22 to derive total GVA.																
Revisions	The results for the years 1995 to 1999 have been aligned with the most recent National Income and Expenditure aggregates.																
Regions	The regions for which the accounts have been compiled are the eight Regional Authority NUTS3 regions. The Mid East region (Kildare, Meath and Wicklow) and the Dublin region are affected by a substantial proportion of their workforce living in one region and commuting to work in another. It is more meaningful to combine these two regions. The definition of the regions is outlined below. Figures have also been shown for the two overall NUTS2 regions i.e. Border, Midland and Western region and Southern and Eastern region.																
EU Average	The indices of GVA per person in relation to the EU as 100, shown in Table 15, are based on the relevant position of Ireland as given in the most recent <i>EC Economic Data Pocket Book</i> published by Eurostat.
