County Incomes and Regional GDP 2002

**Index values of Disposable Income
per person, 2001 - 2002**

Household Income

**Indices of Disposable Income per person
(Base: State=100)**

Region	2001	2002
Border, Midland and Western	91.2	91.8
Border	90.0	89.8
Midland	89.3	92.1
West	93.7	93.9
Southern and Eastern	103.2	103.0
Dublin	114.7	113.4
Mid East	100.3	100.7
Mid West	97.3	97.9
South East	90.9	92.2
South West	95.3	95.2
State	100.0	100.0

Average Income highest in Dublin Region

In 2002 the disposable income per person in the *Southern and Eastern* region was 3% above the State average while the corresponding figure in the *Border Midland and Western* NUTS 2 region was 8.2% below the State average. The gap of 11.2 points between the two regions represents a decrease on the gap of 12 points in 2001 and 13.4 points in 2000.

The Dublin region had the highest disposable income per person of the eight regional authority areas, being 13.4% above the State average in 2002. The disposable income per person of the Border region was 10.2% below the State average in 2002 and was the lowest of the eight Regional Authority Areas.

At county level, the only counties which had an average disposable income per person in excess of the state average were Dublin, Kildare, Wicklow and Limerick. At the lower end of the scale there were six counties with disposable incomes per person below 90% of the State average and a further ten counties between 90% and 95% of the State average.

These results for Household Income and Regional GDP incorporate data from the 2002 Census of Population. Retrospective revisions for the inter censal years 1997 to 2001 have also been made. The 2002 Census provided new data on employment, on patterns of travel to work and on regional and estimated county populations. Revisions to the allocation of GVA have also been made arising from detailed examination of the location of a number of enterprises.

Data are supplied at regional and county level. However, the county data should be regarded more as providing indicative levels rather than accurate absolute estimates.

Differences from cash income

These estimates allocate to regions and counties the various components of income for the household sector as compiled in the National Accounts.

Household Income includes

- Wages and salaries (including employers' contributions to social insurance and pension funds and imputed pension contributions by the State for its employees)
- Income from self employment
- Transfer payments from the State; these include the imputed value of some non-cash benefits, which accrue to households such as secondary and university education, free medicines and free fuel and transport for the elderly.

It also includes, in conformity with the definition of income in the National Accounts, the imputed value of own farm consumption and income in kind, as well as the imputed rent of owner occupied dwellings (i.e. the estimated rent that the occupier, as a tenant, would pay if the dwelling were rented). Household income on this national accounting basis is therefore not the same as the cash income that accrues to private households.

Indices of GVA per person

(Base: State=100)

Region	2001	2002
Border, Midland and Western	70.9	69.1
Border	68.5	71.0
Midland	65.1	63.2
West	77.1	70.5
Southern and Eastern	110.4	111.1
Dublin plus Mid East	119.9	115.9
Mid West	83.4	82.6
South East	85.0	89.3
South West	119.8	131.3
State	100.0	100.0

Regional GDP

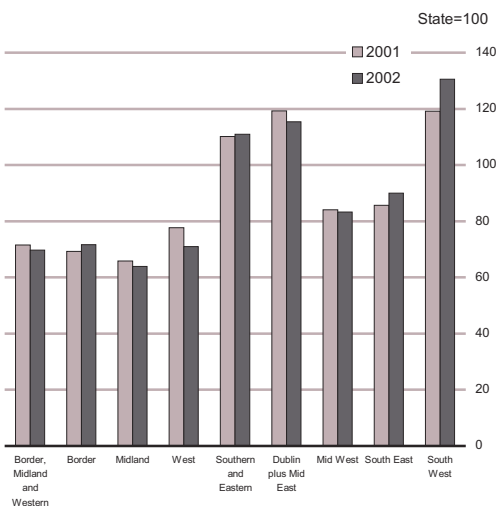

GDP per person highest in Southern and Eastern Region

(Note: GDP and GVA are the same concept i.e. they measure the value of the goods and services (or part thereof) which are produced within a region or country. GDP is valued at market prices and hence includes the taxes charged and excludes the value of subsidies provided. GVA at basic prices on the other hand excludes product taxes and includes product subsidies – see table 14).

The average output level per person in the *Southern and Eastern* region, as measured by gross value added was 11.1% above the State average in 2002. The level of GVA per person in the Southern and Eastern region increased by 82% in the period 1997 to 2002 whereas the GVA per person in the Border, Midlands and Western region increased somewhat less i.e. by 69% during the same period.

The gross value added per person in the *Border, Midland and Western* NUTS2 region was 69.1% of the State average in 2002, down from 70.9% in 2001 (see table 10). However, when measured against the EU average it has shown little change over the same period due to the strong growth in Irish GDP relative to that of other countries and stands at 91.9% in respect of 2002 (see table 11).

Index values of GVA per person, 2001 - 2002

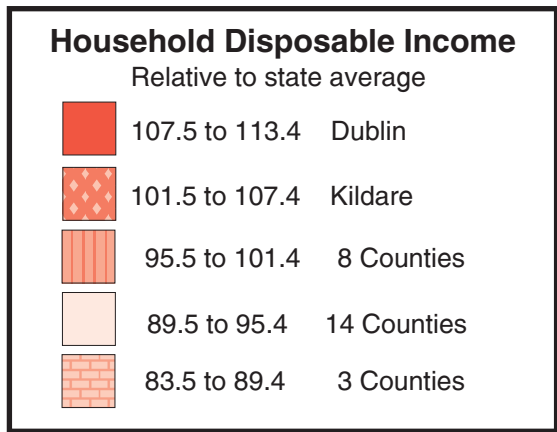

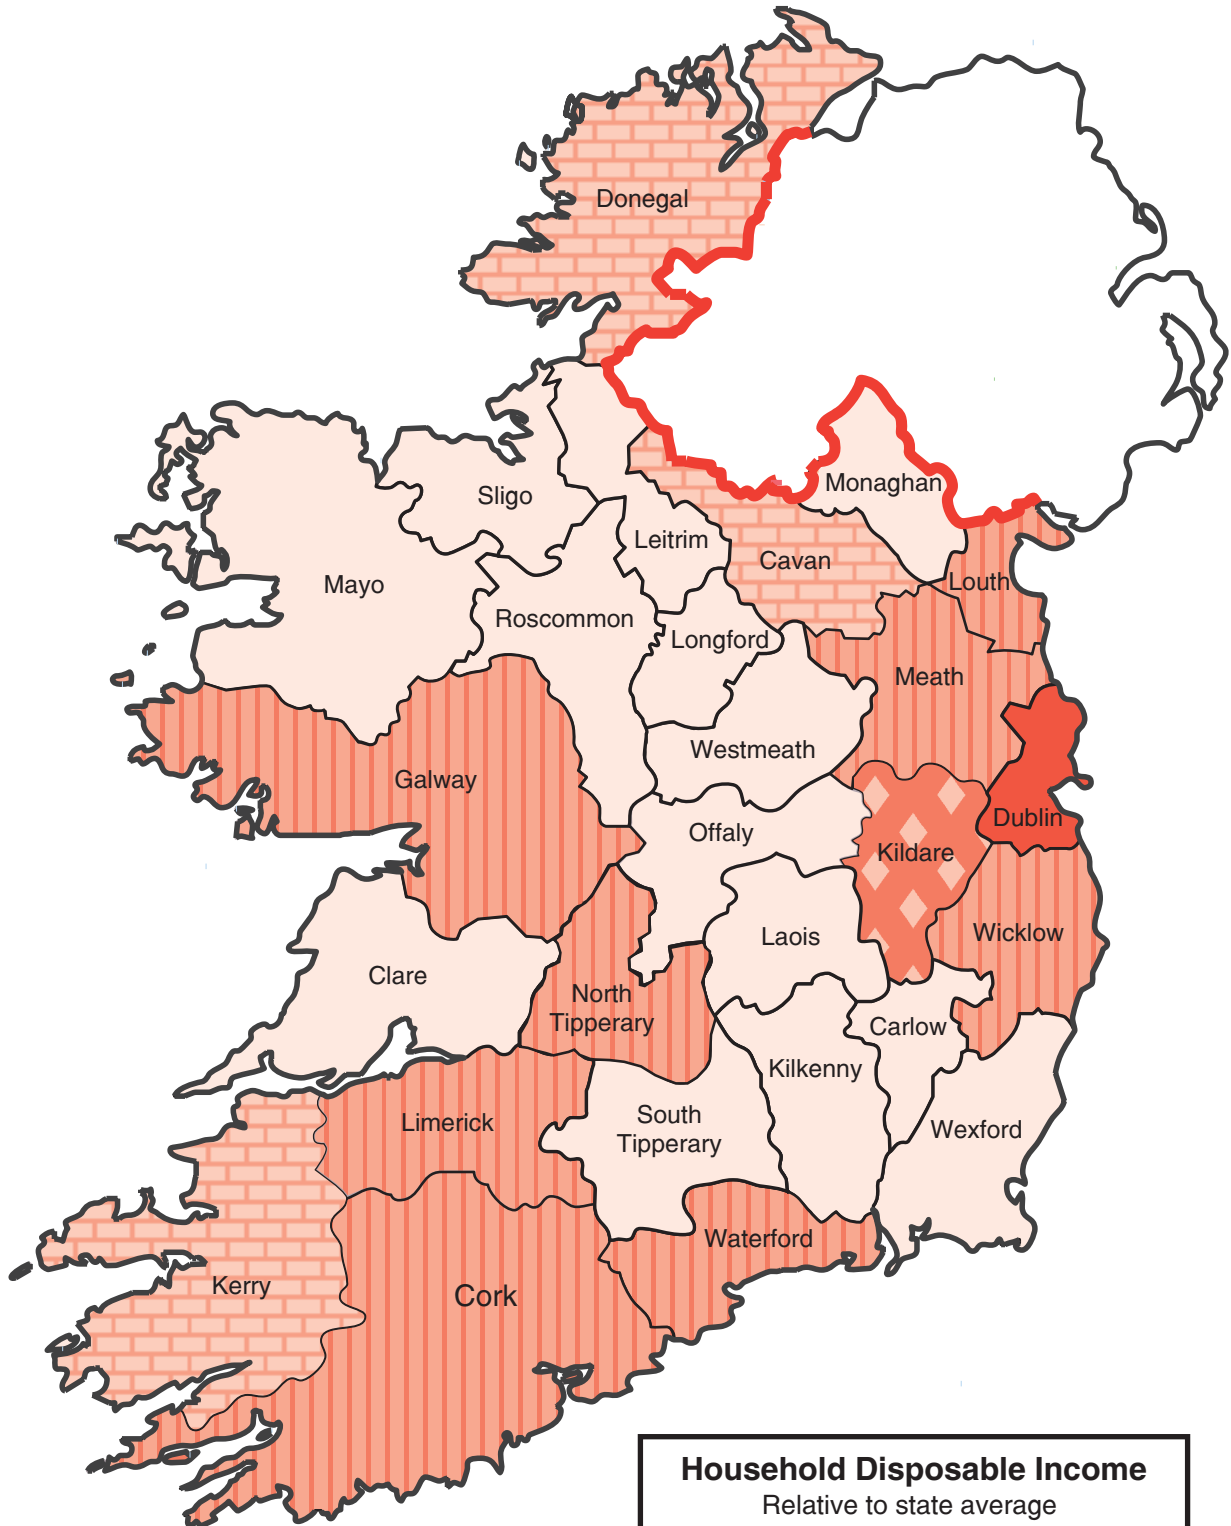

At the NUTS3 regional level, the *South West* region had the highest GVA per person in 2002 at 31.3% above the State average. The combined *Dublin and Mid East* regions produced the second highest GVA per person in 2002 at 15.9% above the State average. The level of GVA per person in this region has exceeded the State average by at least 15% in each year since 1995. It is more meaningful to analyse the *Dublin and Mid East* regions together rather than separately as they are affected by workers living in one region and commuting to work in the other.

Meanwhile the *Midland* region has the lowest GVA per person in 2002 at 63.2% of the State average.

Gross Value Added is not a measure of household income. It is a measure of the value of goods and services produced in a region. It therefore includes the profits derived from the production of goods and services and in particular the profits of multinational companies, much of which accrue to non-residents (See Background Notes).

Household Disposable Income per Head 2002

HOUSEHOLD INCOMES

Details for the years 2001 and 2002 are shown in tables 5 and 6. Detailed tables in respect of 1995 to 2000 are available on request.

Background Notes

Introduction Household incomes were first published in 2000 (Household Incomes Regions and Counties 1991-1997 – Pn 8218) and the publication included a detailed description of the methodology used to estimate the regional values of the income components. Results in respect of 1998, 1999, 2000 and 2001 which included revisions to the earlier years were published in May 2001 (Pn 9907), January 2002, March 2003 and January 2004 respectively.

Regional accounts were first published in 1996 (Regional Accounts 1991 – Pn 3232). They were in respect of 1991 and a full description of the methodology used was included. A further set of accounts in respect of 1993 was published in 1997 with some additional methodological details. Results have been published annually since.

Revisions Results of the 2002 Census of Population have been used in compiling the tables in this report. The Census of Population provides data on employment which is used in some cases to distribute wages. It also provides data on travel to work patterns and on population by region and county. Accordingly, retrospective revisions have also been carried out for the inter censal years 1997 to 2001 inclusive. The geographic locations of industries have also been reviewed and revised where necessary. Revisions to national accounts data which were incorporated retrospectively into the publication NIE 03 have been carried through into these tables as is the usual practise.

Household Income

Primary Income Household *Primary Income* is defined for National Income purposes as follows:

Income of self employed

plus

Compensation of employees

(i.e. Wages and Salaries, Benefits in kind, Employers' social insurance contribution)

plus

Rent of dwellings

(including imputed rent of owner-occupied dwellings)

plus

Net interest and dividends

The last component is a net item, which implies that payments by households of interest are deducted in deriving primary income.

Total Income Total income is defined as:

Primary income

plus

Social benefits

plus

Other current transfers

Disposable Income Disposable income is defined as follows:

Total income

minus

Current taxes on income

(i.e. Income taxes, other current taxes)

minus

Social insurance contributions

(i.e. Employers', employees', self employed, etc.)

National Income The estimates for the State for the different components of household income have already been published in the National Income and Expenditure Report 2003 (NIE 2003). The *other current transfer payments* to and from households are included in this household income report on a net basis with *social benefits*.

Item	2002 Value €m	Source (NIE 2003)
Primary Income		
Income of self employed	11,166	Items 1 and 5, Table 1
Rent of dwellings (incl. imputed rent)	6,290	Item 7, Table 1
Remuneration of employees	50,138	Items 2,3,9 and 10, Table 1 plus row 4, Table 12
Net interest and dividends	395	Row 9, Table 12 minus Item 7, Table 1
Social benefits and net current transfers		
Statistical discrepancy	-990	Item 122, Table 9
Total Income	80,173	Item 125, Table 9
Taxes on personal income and wealth		
Income tax (incl. surtax)	8,979	Table 22
Motor vehicle duties (household part)	320	Table 22
Other taxes	9	Table 22
Training and employment levy	242	Table 22
Income Levy	0	Table 22
Social Insurance contribution	5,497	Item 168, Table 19
Total taxes on income	15,047	Item 127, Table 9

Per Capita Incomes The CSO publishes population estimates at regional level annually but not at county level. County populations for 1997 to 2001 have been estimated in this report by applying the year to year changes at regional level, shown in the revised regional population figures which were compiled following the publication of the 2002 Census, to the counties within the regions. The population figures in 2002 have been taken directly from the 2002 Census.

Statistical Discrepancy The official level of GDP is taken to be the average of the independently compiled Income and Expenditure estimates. The resulting balancing item which is half of the difference between the two estimates is called the Statistical Discrepancy. This must be added to the income components in tables 5 and 6 to derive Total Household Income.

GDP by Region

Gross Value Added Gross Value Added at *basic prices* is a measure of the value of the goods and services produced in a region (less the materials and services used which come from outside the region) priced at the value which the producers received minus any taxes payable and plus any subsidies receivable as a consequence of their production or sale. GVA differs from household income in three main respects. Firstly, GVA includes the total profits of companies. Company profits arising in the State, which accrue to non-residents, are considerable. Secondly, the workforce that produces the GVA in a region may not live there and may bring their incomes home to a neighbouring region. Thirdly, personal income includes items such as social welfare benefits and factor incomes from abroad, which are not included in GVA.

Valuation Value added is firstly calculated at *factor cost*, which includes all subsidies and excludes all taxes. Conversion to a valuation at *basic prices* is achieved by subtracting *overhead* subsidies and adding *overhead* taxes. Conversion to *market prices* is then obtained by adding *product* taxes and subtracting *product* subsidies (see table 14). Most of the tables in this report on GVA are based on GVA at basic prices. However tables 15a to 18a have been added for the first time in this release and are based on GVA at factor cost. The results in the release are based on the ESA95 system of accounts which is now in use throughout the European Union. Results provided in earlier releases (up to *GDP by region 1997*) were based on the ESA79 system of accounts. GVA is one of the principal concepts used in deciding eligibility for structural funds.

Statistical Discrepancy	The official level of GDP is taken to be the average of the independently compiled Income and Expenditure estimates. The resulting balancing item which is half of the difference between the two estimates is called the Statistical Discrepancy. This must be added to the income components in tables 15, 15a, 18 and 18a to derive total GVA.																
Regions	The regional classifications in this release are based on the NUTS (Nomenclature of Territorial Units) classification used by Eurostat. The regions for which the accounts have been compiled are the eight Regional Authority NUTS3 regions. The Mid East region (Kildare, Meath and Wicklow) and the Dublin region are affected by a substantial proportion of their workforce living in one region and commuting to work in another. It is therefore more meaningful to combine these two regions. The definition of the regions is outlined below. Figures have also been shown for the two overall NUTS2 regions i.e. Border, Midland and Western region and Southern and Eastern region.																
EU Average	The indices of GVA per person in relation to the EU25=100, shown in table 11, are based on the relevant position of Ireland as given on the Eurostat website. These figures were last updated on 13/12/2004. Note that these indices are now to base EU25=100 . Thus, they are not comparable with previous releases based on EU15=100 .
