## Explanatory notes

### Introduction

The estimates of external trade provided in this publication are a combination of Customs-based non-EU trade statistics and estimates from the Intrastat survey of Irish traders involved in trade with other EU member states.

*Particular care should be taken in comparing post-1992 data with data for 1992 and earlier years at the commodity or country level because the fundamental change in the data collection system in January 1993 has had some impact on the classification of transactions.* The need to incorporate estimates for Intrastat survey non-respondents and for traders below the survey thresholds also affects comparisons.

The estimates are subject to revision on foot of late Intrastat and VAT returns and corrections made by traders to Intrastat returns already submitted.

### Sources

Since the completion of the EU Single Market at the end of 1992, trade statistics with EU member states and trade statistics with non-EU countries are compiled from two separate sources.

Customs declarations, the traditional source of almost all trade statistics, were no longer required for most movements of goods within the EU. A new EU-wide system for collecting intra-EU trade statistics, Intrastat, was introduced in January 1993. The Intrastat survey, which is conducted by the Revenue Commissioners (VIMA Office), is linked to VAT and applies to all EU member states.

The Intrastat system is based on two components.

The first is the Intrastat survey itself, in which the larger traders make detailed monthly returns giving information on the quantity and value of all imports or exports with EU countries. This survey is carried out under Regulation (EC) No. 638/2004 of the European Parliament and of the Council<sup>1</sup> and Commission Regulation (EC) No. 1982/2004<sup>2</sup>.

Traders whose imports from EU countries in the previous year exceeded €191,000 must make a detailed import return each month; traders whose exports to EU countries in the previous year exceeded €635,000 must make a detailed export return each month. There are about 37,650 traders involved in intra-EU trade, of which about 7,850 are required to make import returns and 2,000 export returns. The response rate in terms of number of traders is about 89%, covering about 93% of the total value of intra-EU trade for the current month. When results are finalised with the publication of the following years' results, the response rate by number of traders is up to 96%, covering 100% of intra-EU trade.

The second component of the Intrastat system is the regular VAT return, on which all traders are required to record the total value of goods imported from and exported to other EU member states. The information provided on the VAT returns forms the basis for determining total EU trade for those traders below the Intrastat thresholds, for estimating trade for non-respondents above the thresholds, for maintaining the VIMA trader register of EU traders, and for identifying those exceeding the thresholds required to make the detailed Intrastat return.

Traders not registered for VAT and private individuals who move goods within the EU have no obligations under the Intrastat system, and their trade is therefore not included in the statistics.

The statistics of trade with non-EU countries are, as before, compiled mainly from the documents supplied by importers and exporters (or their agents) to the Customs authorities. The document is the *Single Administrative Document* (SAD) used for Customs clearance purposes. The information on the document is captured by the Customs AEP (Automated Entry Processing) system, either by feeding it in at the Customs Stations or by electronic transfer direct from the trader. The AEP records, with the statistical fields, are transferred to VIMA for processing.

<sup>2</sup> Official Journal No L343, 19.11.2004, p.3.

## Responsibility for data collection, compilation and publication

In the case of both the intra-EU and extra-EU trade, the basic data are collected and edited by the Office of the Revenue Commissioners. The VIMA Office in Dundalk is the branch of Revenue responsible for this work. For Intrastat, it includes the maintenance of the trader register (a register of all known intra-EU traders), the processing of returns (usually on paper or diskette), data validation, and editing. For extra-EU trade, the work involves editing and validation.

The VIMA Office passes the edited data to the External Trade Statistics Division of the Central Statistics Office (CSO). The CSO checks the data for consistency, and prepares estimates for each trader who has not been included (Intrastat non-respondents and traders below the Intrastat thresholds) and for certain special categories of trade (parcel post and non-EU low-value transactions). It combines these estimates with the data received, and disseminates the results (releases, publications, diskettes, commodity reports, parliamentary questions, etc). Other work by the CSO includes unit value index number compilation and seasonal adjustment.

## Intrastat estimation

The figures include estimates for traders above the Intrastat thresholds who did not make Intrastat returns, and for traders below the thresholds who did not provide aggregate intra-EU trade figures on their VAT returns. Estimation is made more difficult because the trade boxes on the VAT form are often left blank and entries, when they are made, are often of poor quality.

In addition, the Intrastat estimates for imports incorporate an upward adjustment, equivalent to about 1.75% of total imports, which is included under 'Unclassified Estimates'. This special adjustment arises from the difficulty of comprehensively covering all EU imports through the Intrastat survey system.

The 'Unclassified' categories in the tables also include certain miscellaneous adjustments.

Estimates for traders below the thresholds are assigned to partner country (by using the country profile of returns from traders just above the Intrastat thresholds) but are not assigned to commodity. Estimates for traders above the thresholds (non-respondents) are assigned to partner country and commodity where at least one return is available for the preceding twelve months.

## Coverage

The following classes of goods are **excluded** from the trade statistics.

- Means of payment, which are legal tender, and securities
- Monetary gold
- Emergency aid for disaster areas
- Goods benefiting from diplomatic, consular or similar immunity
- Goods for and following temporary use, provided all the following conditions are met:
  - No processing is planned or made
  - The expected duration of the temporary use is not longer than 24 months
  - The dispatch/arrival has not to be declared as a delivery/acquisition for VAT purposes
- Goods used as carriers of information such as floppy disks, computer tapes, films, plans, audio and videotapes, CD-ROMs with stored computer software, where developed to order for a particular client or where they are not the subject of a commercial transaction, as well as complements for a previous delivery, e.g. updates for which the consignee is not invoiced
- Provided that they are not the subject of a commercial transaction:
  - Advertising material
  - Commercial samples
- Goods dispatched to national armed forces stationed outside the statistical territory and goods received from another Member State which had been conveyed outside the statistical territory by the national armed forces, as well as goods acquired or disposed of on the statistical territory of a Member State by the armed forces of another Member State which are stationed there
- Spacecraft launchers on dispatch and on arrival pending launching into space and at the time of launching into space
- Sales of new means of transport by natural or legal persons liable to VAT to private individuals from other Member States

In addition, intra-EU trade statistics exclude:

- Trade by traders not registered for VAT
- Trade by private individuals who move goods within the EU
- Goods dispatched under distance selling arrangements that are below the special VAT distance selling threshold operating in the Member State of destination.

## Recording system

Irish external trade statistics are compiled in accordance with the 'general' system of recording international trade. Under this system imports and exports are recorded at the time the goods are moved across the boundary of the State.

In particular this means that goods imported into a Custom bonded warehouse are recorded at the time of entry into the country and not at the time of their release from the warehouse.

Also, agricultural products or other goods exported for storage abroad are included in the value of exports at the time of their departure from the country.

Goods in transit are excluded. The other detailed exclusions are listed earlier.

## Valuation

For imports the *cif* value (inclusive of cost, insurance and freight to the point of entry to the State) is used. Normally, for goods imported under a commercial contract of sale, the value taken is the transaction value i.e. the *cif* price paid or payable for the goods when sold for export to Ireland. If there is no transaction value or if the transaction value is not acceptable, the value is determined under the specific rules laid down in EU legislation.

For exports the *FOB* (free on board) value is used. This is the cost of goods to the purchaser abroad, including packing, transport in the State, loading charges, insurance and all other charges accruing up to the point where the goods are put on board the exporting vessel or aircraft or are conveyed to the land frontier.

The value excludes:

- any sums receivable by the exporter by way of export refund, drawback, subsidy or other bounty
- any foreign customs duties or freight charges beyond the port or point of exportation.

In particular, for goods on which export refunds are payable to the exporter under the Common Agriculture Policy, the export value does not include the amount of the refund. For goods subject to export charges or levies the export value includes the amount of the charge or levy.

Valuation is in euro. For transactions in which the value is expressed in a foreign currency, conversion to euro is done using the current exchange rate.

## Reference period

The calendar month is the basic period for compiling the data. Import and export transactions to non-EU countries are classified to the month in which the relevant customs entry is registered. The data for the Parcel Post trade relate to the month of shipment into or out of the country.

## Shannon Free Zone

Prior to 2011, data for traders operating in the Shannon Free Zone were collected by traders submitting summary monthly returns to the CSO. The CSO Shannon survey data were classified under Section 9 'Commodities and Transactions not classified elsewhere' (SITC code 931.01).

Going forward from January 2011 Shannon data are being collected by VIMA as part of the Intrastat survey and customs documentation for Extrastat data. Therefore, this Shannon data are now incorporated into the detailed CN and partner country transaction level. Hence this data are no longer classified under SITC code 931.01 'Commodities and Transactions not classified elsewhere' and are also now attributed to the actual partner country.

## Parcel post

Non-EU trade in goods that are imported or exported by parcel post, and which are not the subject of customs entries, is estimated each month.

The resulting estimates for imports and exports are included in the overall trade totals. In commodity analyses the data are classified under Section 9 'Commodities and Transactions not classified elsewhere' with SITC code 911.00.

In country and area analyses of trade, the parcel post estimates are classified to the appropriate partner country or area only for USA and Canada. The value of such trade with all other countries is included in the residual heading of the analyses in question.

Data on trade in goods that are imported or exported by parcel post but which are the subject of customs entries are included in all tables in the appropriate commodity and country cell.

## Confidential trade

It is sometimes necessary to take steps to ensure that the business of identifiable traders is not disclosed by publication of full data under the appropriate commodity item or partner country. The value of such confidential trade is included in the overall total value of imports or exports. However, the value or the quantity may be concealed at the detailed level.

## Units of quantity

Net weight is the usual unit of quantity shown. The weight of containers, cases, jars and packing materials is therefore excluded.

Other units of quantity are used for some commodities, notably live animals, motor vehicles, office machines, domestic appliances, watches and clocks, and clothing (where number is used as the unit of quantity), footwear (where the number of pairs is used), floor coverings (where square metres are used), and beverages (where volume is used).

## Partner country

In this publication, imports are recorded *by country of origin* (as opposed to country of consignment or dispatch). Goods obtained or produced in one country originated in that country. A product, in the production of which two or more countries were concerned, is considered as originating in the country in which the last substantial manufacturing process was done. Packing, repacking, sorting and blending are not regarded as manufacturing processes.

Exports are classified *by country of final destination*. The last country to which the goods are specifically directed on their outward movement from the State is regarded as their final destination. This is not necessarily the country in which the goods will be unshipped or that in which they will be finally consumed.

In interpreting analyses by partner country, users should be conscious of the treatment (as outlined in these notes) of Intrastat estimates, Parcel Post trade, Statistical threshold and Confidential trade.

## Country classification

The classification of countries is the country nomenclature (Geonomenclature) as set out annually in the Official Journal of the European Communities. From January 1999, this follows the United Nations' ISO alpha-2 coding system, in which each country is identified by a two letter code. The full list of countries is given in an essentially geographical order in Table 9.

## Commodity classification

Statistics are collected using the 8-digit Combined Nomenclature (CN) – the EU's tariff and statistical nomenclature. This nomenclature is managed and updated annually by the Commission in co-operation with the member states. The CN is aligned with the 6-digit Harmonised Commodity Description and Coding System (HS) – the nomenclature of the Customs Co-operation Council that is used throughout the world for applying customs tariffs and compiling external trade statistics. The 2007CN contains 9,720 8-digit subheadings, the first six digits of which correspond to the HS code.

However, in this publication, imports and exports are classified according to the United Nations' Standard Trade Classification, Revision 4 (SITC Rev 4)<sup>3</sup>. The SITC has been developed by the United Nations for the advancement of the international comparability of statistics on external trade.

SITC Rev 4 contains about 2,970 basic headings (5-digit). These are combined into 261 Groups (3-digit), 67 Divisions (2-digit) and 10 Sections (1-digit). For example, Section 6 (Manufactured goods classified chiefly by material) consists of 9 Divisions, 61 to 69. Division 64 (Paper, paperboard and articles thereof) consists of two groups, 641 and 642, which together consist of 72 basic headings, such as 642.94 (Paper handkerchiefs, towels, tablecloths, garments etc).

SITC follows the structure of the HS. Each of the categories in the SITC (including all the basic headings) is equivalent to a combination of HS headings (and therefore to a combination of CN headings).

Abbreviated commodity descriptions are used in the tables. These are intended as a guide only, the precise coverage being determined by the SITC number preceding the descriptions. The full descriptions of the items and their content are contained in the relevant UN publication. Apart from the classification itself, the UN publications include the correlation tables between SITC and HS.

The index at the end of this volume contains an alphabetical list of the principal commodities and the associated 3-digit SITC Groups.

In interpreting analyses by commodity, users should be conscious of the treatment (as outlined in these notes) of Intrastat estimates, Parcel Post trade, Statistical threshold and Confidential trade.

<sup>3</sup> United Nations. 2006. Standard Industrial Trade Classification Revision. Department of Economic and Social Affairs, Statistics Division, Statistical papers, Series M, No 34, Rev 4. United Nations, New York..

## Quality of detailed data

Every reasonable effort is made to identify and correct errors received in the data, particularly the more serious errors. Despite this, errors occasionally arise in the published data at the detailed level.

With 9,720 commodities (at the most detailed level) and over 200 countries distinguished, it is inevitable that transactions will occasionally be misclassified.

The quality of the published value data is considered good, but the quality of the quantity data (in Tables 13 and 14) is rather variable, more so for trade with EU countries. Given the number of Intrastat transactions, it is not practicable to query all cases with traders, and resources are concentrated on identifying and rectifying the more serious errors that arise in the data collected.

## Revisions to trade data

Corrections to trade data arise from VIMA's edit checks, from verification visits to traders' premises by Revenue Commissioner staff, and from CSO queries. Corrections can also arise from queries from users of the statistics.

Revisions are applied as they arise. For example, data for the current month in this publication contain revisions that arose since publication of the provisional figures. The data for the same month a year ago may be considered final: they would be revised only in exceptional circumstances. Revisions are applied also to the volume indices and to the seasonally adjusted data.

Seasonally adjusted series are recalculated once a year when the December data become available. The data for the most recent years are shown in this publication; results for earlier periods are available in the CSO data bank *EireStat*.

## EU Trade statistics published by Eurostat

Under Regulation (EC) No. 638/2004 of the European Parliament and of the Council and Commission Regulation (EC) No. 1982/2004, each member state is obliged to compile statistics of its foreign trade and forward them to the Statistical Office of the European Communities (Eurostat).

These data, for all member states, are published by Eurostat. There are some conceptual differences between the data for Ireland published by Eurostat and the data published nationally.

The data published by Eurostat for non-EU trade are compiled under the 'special' trade system as opposed to the nationally published data which are

compiled under the 'general' trade system (as outlined in these notes). While the general system records imports and exports at the time the goods are moved across the physical boundary of the State, the special system records transactions across the Customs boundary of the State. For example, in the special system, goods imported into a Customs bonded warehouse are recorded only at the time of release from the warehouse.

In the data published by Eurostat for imports of goods (a) originating in the EU, (b) in free circulation in the EU or (c) after inward processing in the EU, the country of consignment rather than the country of origin is shown. For other goods originating in non-EU countries that are not in free circulation in the EU, the country of origin is shown. In the nationally published results the country of origin is shown in all cases.

## Sources of additional information

Provisional trade statistics are issued each month in the *External Trade* statistical release.

The publication of the full range of detail available on trade statistics is not a realistic option. However, this information is readily accessible. Details at the level of CN and SITC are available by special arrangement on a fee basis on CD Rom and computer print-outs.

Enquiries are welcome. Specific details can also be obtained by telephone, post or personal visit (between 10:00am - 12:30pm and 2:30 - 4:45pm) to:

## Notes on the tables

### Table 1: Summary of trade

This gives the total value of imports, exports and the trade surplus (exports less imports), volume and price indices for imports and exports together with the terms of trade indices.

Changes in the values of imports and exports are separated for analytical purposes into their price and volume components. Unit value prices are calculated by dividing the value data by the corresponding quantity data for detailed commodity groupings. The value changes are deflated by the resultant price trends to provide estimates of volume change. Monthly and annual price and volume indices are published.

The monthly price (unit value) index measures monthly price trends relative to the annual price level in the preceding year using value weights relating to that year's trade (Laspeyres index). The annual index is compiled using value weights for both the current and previous years (Fisher index) to allow for change in the structure of external trade. The monthly series should be regarded as interim measures suitable for month-to-month comparisons within a given year. However, when the annual price index is compiled, the monthly price indices are rescaled to make their average equal to the annual index.

The terms of trade index number is the export price (unit value) index number as a percentage of the import price (unit value) index number.

### Table 2: Seasonally adjusted series

Monthly imports, exports, trade surplus, and the volume series for imports and exports have been seasonally adjusted using the US Bureau of the Census X-11 Variant of the Census Method 11 Seasonal Adjustment Program.

The series are affected by irregular movements. The seasonal adjustment process does not remove the irregularities, and so isolated extreme values should not be given too much weight.

The series are recalculated at the end of each year using up-to-date seasonal patterns available at the time.

### Table 3: Imports by main use

In this table, imports are classified into the main use categories:

- Producers' capital goods ready for use
- Consumption goods ready for use
- Materials for further production.

These categories provide a reclassification of imports in terms of national accounts aggregates. 'Consumption goods ready for use' is further broken down to distinguish 'Food, drink and tobacco goods'. 'Materials for further production' is further broken down to distinguish 'Materials for further production in Agriculture'.

### Table 4: Imports by main use and area of origin

This gives imports classified by main use (see above) for the areas:

- Great Britain and Northern Ireland
- Other EU member states
- Rest of the world.

### Table 5: Exports by industrial origin

In this table, exports are classified by the sector of origin categories:

- Agriculture produce
- Forestry and fishing produce
- Industrial produce.

### Table 6: Exports by industrial origin and area of destination

This gives exports classified by industrial origin (see above) for the areas:

- Great Britain and Northern Ireland
- Other EU member states
- Rest of the world.

### Tables 7 - 8: Trade by area

Imports and exports are classified by area of origin and area of destination respectively.

The area groupings are shown in the footnotes to the table. In this table, APEC represents 'Asia-Pacific Economic Co-operation' and NAFTA represents 'North American Free Trade Agreement'.

### Table 9: Trade by country

This gives the complete list of countries for which trade data are compiled. Some country names are abbreviated because of space constraints. The order in which the countries appear is essentially a geographic one.

### Table 10: Trade by SITC section and division

This table classifies imports and exports according to the 1-digit (Section) and 2-digit (Division) levels of SITC Rev 4.

**Table 11: Trade by SITC division and country**

This table gives trade for each Division (2-digit level) of the SITC. For a particular Division, country details are given when the value of imports from or exports to that country exceeds €1,300,000 for the month in question or an average of €900,000 per month for the year to date. The total for EU countries is also shown.

Section 9 in this table includes Parcel Post and Statistical Threshold trade; these categories of trade are not broken down by commodity.

The category 'Non-EU, unknown' used in this (and the following) table includes SAD exports with an unknown country of destination.

**Table 12: Trade by country and SITC division**

This gives trade for each country, and for the total of EU countries. For a particular country, Division (2-digit) details are given when the value of imports or exports for that Division exceeds €1,300,000 for the month in question or an average of €900,000 per month for the year to date.

**Table 13: Imports by SITC heading and country**

This contains the detailed quantity and value data classified by commodity (SITC Rev 4) and by country, as well as EU and non-EU subtotals. The unit of quantity used for each item is indicated in brackets after the SITC code.

Country data are given under each commodity heading (except in Section 9) subject to the value of trade with that country being above €1,300,000 in the month in question or an average of €900,000 per month for the year to date.

The figures in this table relate to returned trade only: Intrastat estimates are excluded because they are not broken down by commodity.

**Table 14: Exports by SITC heading and country**

The corresponding table for exports.

**Symbols and abbreviations****Symbols used in the tables**

..	not available or not applicable
-	nil
0	value less than half the unit shown
EUR	Euro

**Abbreviations used for quantity units in Tables 13–14**

g	gram
hkg	100 kg
t	tonne
kl	kilolitre (1,000 litres)
kIPA	1,000 litres of pure alcohol
MwH	megawatt hour
M2	square metre
pa	pairs
th	thousand
thP	thousand pairs
no	Number

**Abbreviations used for commodity descriptions in Tables 13–14**

AC	alternating current
DC	direct current
cg	centigram
excl	excluding
incl	including
mach	machine/machinery
mech	mechanically
MPa	megapascal
nc	numerically controlled
nes	not elsewhere specified or included
nfw	not further worked
phos	phosphorus
prep	prepared/preparation
preps	preparations
sg	specific gravity
syn	synthetic
thick	thickness
t/m	turns per metre
veg	vegetable
v	volt
w	watt

## **Summary tables**
