# Industrial Production \& Turnover <br> August 2010 (Provisiona) and July 2010 (Final) 

## Manufacturing Industries (Seasonally adjusted) <br> (Base: year 2005=100)

|  | Production <br> Index | Turnover <br> Index |
| ---: | :---: | :---: |
| August 2009 | 91.8 | 83.8 |
| July 2010 | 121.1 | 103.6 |
| August 2010 | 101.3 | 98.7 |
| Monthly \% change | $-16.4 \%$ | $-4.7 \%$ |
| Annual \% change | $+10.4 \%$ | $+17.9 \%$ |
| Mar 2010-May 2010 | 108.8 |  |
| Jun 2010-Aug 2010 | 113.0 | 95.5 |
| \% change | $+3.9 \%$ | 100.8 |
|  |  | $+5.5 \%$ |

## Annual Production increased by 10.4\% in August 2010

On an annual basis production for Manufacturing Industries for August 2010 was 10.4\% higher than in August 2009 (see above and Table 1). The most significant changes were in the following sectors: Basic pharmaceutical products and preparations $(+18.5 \%)$ and Computer, electronic and optical products ( $-10.9 \%$ ). The seasonally adjusted volume of industrial production for Manufacturing Industries for the three month period June 2010 to August 2010 was $3.9 \%$ higher than in the preceding three month period (see above and Table 4).

The "Modern" Sector, comprising a number of high-technology and chemical sectors, showed an annual increase in production for August 2010 of 14.6\% and an increase of $2.2 \%$ was recorded in the "Traditional" Sector (see Table 2).

The seasonally adjusted industrial turnover index for Manufacturing Industries was $5.5 \%$ higher in the three month period June 2010 to August 2010 when compared with the preceding three month period (see above and Table 7). On an annual basis turnover was $17.9 \%$ higher when compared with August 2009.

For more information contact Patrick Foley at 021453 5012, Alan Finlay at 021 4535211 or Sean Hurley at 0214535242.

## Background Notes

Introduction The monthly industrial production index monitors current trends in the volume of production of industrial local units with three or more persons engaged. The primary purpose of the index is to measure changes in value added at constant prices.

The monthly index of turnover measures the change in the level of sales each month of industrial products, whether manufactured in the month in question or in previous periods (excluding non-industrial activity where practicable). The turnover indices outlined in this release are exclusive of VAT.

The principal difference between the production and turnover indices is that the production index traces the quantitative volume of production (i.e. effect of price changes excluded) each month whether sold or not, whereas the turnover index reflects both the volume of sales and the price level. Starting with January 2009 updated industrial production and turnover indices are being published to base year $2005=100$.

The new orders indices measure trends in new orders accepted, including those received and filled during the last month. Orders are valued at the amounts invoiced or still to be invoiced (excluding VAT).
The response rates for the provisional results are typically $46 \%$ in terms of the local units surveyed covering $84 \%$ of the value of production and $82 \%$ of the value of turnover. The corresponding figures for the final results are $58 \%, 91 \%$ and $90 \%$ respectively. These response rates are based on averages for a 12 month period ending September 2009. In September 2009 an additional question on response burden showed that respondents took an average of 19 minutes to complete the monthly inquiry form.

Sample covered The monthly survey which provides data for calculating the indices covers the larger local units which between them account for the bulk of industrial output - in general those which in the base year 2005 had twenty or more persons engaged in NACE 5 to 35. For certain sectors the threshold of 20 persons engaged is lowered where this is considered necessary to ensure representativeness of the sample or where data for a sector would have to be kept confidential if the 20 persons engaged threshold were applied. The business activity classifications are based on the Statistical Classification of Economic Activities in the European Community (NACE Rev. 2).

## Methodology

Working day adjusted individual production, turnover and new orders sub-indices are compiled for each detailed NACE class. These sub-indices are combined to provide the indices for broader sectoral groupings, using as weights for a sector the gross value added at factor cost for production indices, and turnover in goods produced and industrial services provided to others for turnover and new orders indices, for all units in that sector covered in the 2005 Census of Industrial Production (CIP). Weights and base year are revised every five years.
The production index is compiled using two methods. One method is based on the valuation of quantity data at base year prices. The series has been compiled using updated prices from the Prodcom 2005 survey. Alternatively, in cases where reliable quantity data cannot be obtained current value data is converted to values at base year prices using suitable Wholesale Price Index (WPI) deflators.
New orders indices have been produced from January 2004 onwards using reported monthly orders data. In the event of non-response, the reported turnover is used as an estimate for the calculation of new orders indices.

Seasonal The data is seasonally adjusted using an X-11 procedure. This procedure is an adaptation of the Adjustment US Bureau of the Census X-11 Seasonal Adjustment Program. This seasonal adjustment process is carried out once a year using the latest (currently up to and including December 2009) monthly patterns available. Each index is independently seasonally adjusted i.e. the adjusted indices of groupings of sectors are not systematically derivable as weighted averages of their component parts.

NACE The business activity classifications used in this Statistical release are based on the Statistical

The descriptions of particular NACE Rev. 2 sectors are sometimes shown in abbreviated form in the release. For further information on the NACE Rev. 2 classification of industrial activity, visit the CSO website (http://www.cso.ie/surveysandmethodologies/classification indus act.htm).

## Retrospection

Indices calculated under the previous system (NACE Rev1.1 and base year 2000) have been re-cast in order to make comparisons with earlier periods. When making comparisons with data produced in previous monthly industrial production and turnover releases (classified by NACE Rev. 1.1 and NACE Rev. 70) it should be noted that the content of NACE Rev. 2 sectors can be quite different from that of similarly-titled NACE Rev. 1.1 and NACE Rev. 70 sectors.

## Updated Wholesale Price Index (Base Year = 2005)

The wholesale price indices were revised in June 2010 to include updated weights (base year = 2005) and to allow for the NACE Rev. 2 reclassification of the indices. New base year weights were compiled for the Wholesale Price Index using the results of the 2005 Census of Industrial Production (CIP) and the Prodcom Inquiry surveys. New base weights were applied to each three digit NACE group on the basis of the Census of Industrial Production and the commodity groups weights were assigned on the basis of the Prodcom Inquiry. The business activity classifications used in the updated WPI series are based on the Statistical Classification of Economic Activities in the European Community i.e. NACE Rev. 2. The main change arising from the adoption of NACE Rev. 2 is the reclassification of local units in the Publishing sector (NACE Rev 1.1 22) to the Services sector. Other significant changes include separate NACE divisions for Food products (NACE 10), Beverages (NACE 11), Chemicals and chemical products (NACE 20) and Basic pharmaceutical products and preparations (NACE 21).

For further information on the updated WPI indices see the CSO publication Wholesale Price Index, Introduction of Updated Series Base Year $2005=100$
(http://www.cso.ie/releasespublications/documents/prices/2010/wpiintro05.pdf).
The Industrial Production Indices have been reclassified to Nace Rev. 2 from January 2009. Prior to the adoption of the updated WPI indices in June 2010, adjustments were made to the Nace Rev 1 WPI indices in the calculation of Nace Rev. 2 deflators for the industrial production indices.
