Background Notes

Source and scope of the Live Register The Live Register is compiled from returns made for each local office to the Central Statistics Office by the Department of Social Protection. It comprises of persons under 65 years of age in the following classes:

- ◆ All Claimants for Jobseekers Benefit (JB) excluding systematic short-time workers
- ◆ Applicants for Jobseekers Allowance (JA) excluding smallholders/farm assists and other self-employed persons
- ◆ Other registrants including applicants for credited Social Welfare contributions but excluding those directly involved in an industrial dispute.

Reference Period The reference periods for the Live Register results are as follows:
November 2012 – 27th October to 30th November 2012
November 2011 – 29th October to 25th November 2011

Unemployment statistics The Live Register is not designed to measure unemployment. It includes part-time (those who work up to three days a week), seasonal and casual workers entitled to Jobseekers Allowance and or Jobseekers Benefit. **Unemployment is measured by the Quarterly National Household Survey** (formerly the Annual Labour Force Survey).

Standardised unemployment rates The Standardised Unemployment Rate (SUR) series in Table 3 is based on the estimated number of persons unemployed expressed as a percentage of the total economically active population (i.e. the Labour Force), using internationally comparable definitions of employment and unemployment, as recommended by the International Labour Office.

Official estimates of the number of persons unemployed and the unemployment rate are produced from the Quarterly National Household Survey (QNHS). The QNHS is the only source of information on unemployment and employment which can apply standard International Labour Organisation (ILO) methodology to the estimation of these key indicators. The background notes of the QNHS release contain more information on the ILO criteria. Given the timelag required to produce estimates from the QNHS and the quarterly periodicity, short-term trends in the Live Register are used to estimate more up-to-date monthly unemployment rates.

The seasonally adjusted QNHS estimate of unemployment is used as a benchmark for February (Quarter 1 QNHS), May (Quarter 2 QNHS), August (Quarter 3 QNHS) and November (Quarter 4 QNHS) each year. The latest QNHS benchmark is updated using the trend in the seasonally adjusted Live Register to allow the estimation of the SUR. Once new QNHS data is available it is used to revise the SUR series. The assumption underlying this methodology is that over short periods the change in the seasonally adjusted Live Register will represent accurately the change in unemployment which will be seen from the QNHS. This methodology has been used since the QNHS was first initiated at the end of 1997.

QNHS The Quarterly National Household Survey (QNHS), which began in September 1997, replaced the Labour Force Survey and provides quarterly estimates of the unemployment rate. Up to and including the fourth quarter of 2008 the QNHS operated on a seasonal quarter basis. As of the first quarter 2009 the QNHS is now undertaken on a calendar quarter basis.

The calendar reference quarters for survey results are:

Q1 - January to March, Q2 - April to June, Q3 - July to September and Q4 - October to December.

The calendar quarter estimates for Q3 2012 (adjusted for seasonality) are:

	Q1	Q2	Q3	Q4
	%	%	%	%
2007	4.5	4.7	4.6	4.9
2008	5.0	5.7	6.9	8.1
2009	10.2	12.1	12.6	13.0
2010	13.0	13.8	13.9	14.7
2011	14.3	14.5	14.9	14.8
2012	15.0	14.9	14.8	

Seasonal adjustment Since January 2011 the seasonal adjustment of the Live Register is completed by applying the X-12-ARIMA model, developed by the U.S. Census Bureau. Seasonal adjustment is conducted using the indirect approach, where each individual series is independently adjusted (male under 25 years, female under 25 years, male 25 years and over and female 25 years and over). To preserve consistency between the individual and aggregate series, the series for gender, age group and total Live Register are then created from these four component series.

The X-12 ARIMA method has the X-11 moving averages process at its core, but builds on this by providing options for pre-treating the series using a regARIMA approach for prior adjustment and series extension. In essence this methodology will estimate seasonal factors while taking account of temporary changes, outliers, level shifts and calendar effects (e.g timing of Easter).

All Live Register series are updated monthly with the latest three years of seasonally adjusted data as part of the concurrent approach. The comprehensive annual review contains revisions to the entire series. Revisions to the series are typically very minor in scale.

For additional information on the use of X-12-ARIMA see detailed note in the January 2011 LiveRegister release.

Jobseeker's Benefit Duration Prior to 19 January 2004 Jobseeker's Benefit was payable for **15 months** (390 days).

From 19 January 2004, Jobseeker's Benefit could be paid for a maximum of 15 months (390 days) to people who had at least 260 paid PRSI contributions. Jobseeker's Benefit could be paid for a maximum of 12 months (312 days) to people who had less than 260 paid contributions (Refers to new claim).

Since 15 October 2008, Jobseeker's Benefit can be paid for a maximum of **12 months** (312 days) to people who have at least 260 paid PRSI contributions. Jobseeker's Benefit can be paid for a maximum of **9 months** (234 days) to people who have less than 260 paid contributions (Refers to new claims).

Live Register Flows Live Register flows data is sourced from information collected by the Department of Social Protection. The aggregate of new registrations for each month is used in conjunction with the net change over the same period to calculate the outflow from the register. A new registration is defined as anybody on the Live Register in a particular month who was not on it the previous month. Inflows and outflows published in this release do not take account of inter-scheme activity within the Live Register. For example, if a claimant exhausts his/her entitlement to JB and opens a new JA claim this is counted as an outflow in JB and an inflow in JA.

Live Register Area Analysis The basis of the area analysis in Live Register statistics is the Department of Social Protection local office of registration. The areas served by Local Employment Offices do not correspond to specific geographic boundaries. Therefore, registrants at a given local office do not necessarily come from a particular region or area which can be precisely delineated e.g. data for the Cork City Local Office of Registration refers to all persons signing on in Cork City but may include persons not resident in Cork City. **The latest available Live Register data by Province, County and Local Office of Registration will be released on the CSO website through the CSO Main Data Dissemination Service, StatBank one day after the publication of this release.**

NUTS2 and NUTS3 regions The Regional classifications are based on the NUTS (Nomenclature of Territorial Units) classification used by Eurostat. The NUTS3 regions correspond to the eight Regional Authorities established under the Local Government Act, 1991 (Regional Authorities) (Establishment) Order, 1993, which came into operation on 1 January 1994. The NUTS2 regions, which were proposed by Government and agreed by Eurostat in 1999, are groupings of the NUTS3 regions.

Occupations Live Register occupational data is sourced from information collected by the Department of Social Protection on the most recent occupation of claimants when they sign on the Live Register. The classification used is based on the UK Standard Occupational Classification (SOC). “No occupation” is an additional category and includes those who have never worked and those who have no stated occupation.

Age by Duration Analysis Duration of continuous registration on the Live Register was previously compiled on a half-yearly basis (April and October). The Live Register Age by Duration release has now been replaced by a monthly table in this release. The bi-annual release related to the second last Friday of the reference month but the monthly age by duration data since October 2009 corresponds to the end of month Live Register totals. **Detailed tables relating to regional and scheme data will continue to be made available on the CSO website through the CSO Main Data Dissemination Service, StatBank on a bi-annual basis.**

Casual and part-time workers The casual and part-time workers’ figure is based on data supplied by the Department of Social Protection. People may apply for Jobseeker’s Benefit or Jobseeker’s Allowance if they only work for part of a week and be included on the Live Register.

Nationality Data in the nationality grouping table is sourced from information collected by the Department of Social Protection on the nationality of claimants when they first sign on the Live Register.
