

Retail Sales Index

Seasonally adjusted

	Value Index	Volume Index
August 2001	175.6	154.1
August 2002	183.1	155.9
% change	+4.3%	+1.2%

The value of retail sales rose by 4.3% in August 2002 compared to August 2001. The August 2002 index was 1% higher than the July 2002 index. However, if Motor Trades are excluded, the annual increase is 7.8%.

The volume of retail sales (i.e. excluding price effects) increased by 1.2% in August 2002 compared to August 2001. If Motor Trades are excluded the annual increase is 4.8%.

On a three month basis, which gives a more stable indication of recent underlying trends, June 2002 – August 2002 volume figures show a 0.5% increase compared with the three months ending May 2002.

July is the latest month for which final detailed sectoral figures are available. The three month May 2002 – July 2002 volume figures show that, compared with the three months ending April 2002 :

- ◆ The largest increase in the volume of sales was in Department Stores (+3.3%)
- ◆ The largest decrease in the volume of sales was in the Motor Trades sector (-3.4%)

Updated Seasonal Factors

Updated Seasonal Factors based on trading patterns up to June 2002 have been applied to the series. Revised retrospective seasonally adjusted value and volume series based on the updated seasonal factors are available at www.cso.ie. The revised series also incorporate any returns corrected by respondents subsequent to publication.

Background Notes

Retail Sales Index **Introduction of updated series with a new business classification and with base year 1995 = 100.**

An updated Retail Sales Index (RSI) was introduced in the December 1999 release. A detailed description of the new series was published in the March 2000 issue of the *Statistical Bulletin*. The underlying methodology remains unchanged. The index is primarily intended to measure short-term trends. For long term analysis allowance must be made for the fact that the series does not reflect changes in retail structures between updatings.

New Business Classification Commencing with October 1999 the set of monthly indices of retail sales have been compiled according to the Statistical Classification of Economic Activities in the European Community (NACE Rev. 1). The business categories are based mainly on the classification of enterprises in the 1995 Annual Services Inquiry (ASI). There are some fairly substantial discontinuities in the classification of enterprises compared with the former series.

New Base Year The set of new monthly retail sales indices has been compiled with reference to base year 1995 = 100. The underlying structural weighting system is mainly based on the 1995 Annual Services Inquiry. Weights are updated from year to year using ratios of average weekly turnover by size class within business type.

Scope and Coverage The Retail Sales Index covers, on a sample basis, the retail sales of retail businesses, wholesale businesses with sizeable retailing activity and the separate sales establishments of non-distribution enterprises. Excluded from the index coverage are the direct retail sales from non-distribution establishments together with the incidental retail sales of wholesale businesses. Also excluded are sales by hawkers, street stalls and other retailing activities not conducted from permanent business premises. The statistical unit used for reporting sales figures in this inquiry is the enterprise (i.e. Complete business covering all branches).

Methodology The business categories and the underlying structural weighting of the Retail Sales Index is based mainly on the Statistical Classification of Economic Activities in the European Community (NACE Rev. 1). The index system is structured on the retailing enterprises covered in the 1995 Annual Services Inquiry classified by 13 retail business categories and four turnover (excluding VAT) ranges*.

The value indices are calculated by updating the aggregate 1995 retail turnover (including VAT) of these enterprises in these fifty one cells using the monthly retail sales data provided by the enterprise respondent panel from 1995 onwards.

The compilation of the index for a current month is based on the percentage change in average weekly sales in these cells over the corresponding monthly period of the previous year. The monthly volume indices are calculated by deflating the seasonally unadjusted value indices by specially constructed retail price indices derived from the Consumer Price Index (CPI).

Seasonal Adjustment The seasonally adjusted series are updated twice yearly using patterns up to and including the preceding month. The present seasonally adjusted monthly value and volume series are based on seasonal patterns from January 1995 to June 2002. The adjustment is completed by applying the X-11 Variant of the US Bureau of the Census Method 11 Seasonal Adjustment program based on a multiplicative model. The unadjusted series, from which trading day variations have been eliminated, are available on our website (www.cso.ie).

References A detailed description of the Retail Sales Index is provided in the March 2000 issue of the *Statistical Bulletin*. Retrospective details covering three years are provided for all series on both a seasonally adjusted and an unadjusted basis in each issue of the *Statistical Bulletin*.

* The Department Stores business category is not classified by annual turnover but is sub-divided into three retail activity categories.
