

**Retail Sales Index -
Seasonally Adjusted Volume
Annual % Change**

September 2005
September 2006
% change

Retail Sales volume increases by 3.9%

The volume of retail sales (i.e. excluding price effects) increased by 3.9% in September 2006 compared to September 2005. There was a monthly decrease of 0.9%. If Motor Trades are excluded the annual increase was 5.9% and the monthly change was -0.8%

The value of retail sales increased by 4.7% in September 2006 compared to September 2005 and decreased by 1.3% in the month. However, if Motor Trades are excluded, the annual increase was 6.9% and the monthly change was -0.6%.

August 2006 is the latest month for which final detailed figures are available. The three-month June 2006 – August 2006 volume figures show that, compared with the three months ending May 2006:

- The largest increase in the volume of sales was in the Footwear & Leather (+7.6%) sector.
- The largest decrease in the volume of sales was in the Furniture and Lighting (-8.4%) sector.

All figures in this release are trading day and seasonally adjusted. The seasonal factors are based on unadjusted indices up to December 2005.

Background Notes

Retail Sales Index	Introduction of updated series with base year 2000 = 100. An updated Retail Sales Index (RSI) was introduced in the November 2003 release. The underlying methodology remains unchanged. The index is primarily intended to measure short-term trends. For long term analysis allowance must be made for the fact that the series does not reflect changes in retail structures between updatings.
Reference Period	The August period covers the 4 weeks from 30/07/06 to 26/08/06 and the September period covers the 5 weeks from 27/08/06 to 30/09/06.
New Base Year	The set of new monthly retail sales indices has been compiled with reference to base year 2000 = 100. The underlying structural weighting system is mainly based on the 2000 Annual Services Inquiry. Weights are updated from year to year using ratios of average weekly turnover by size class within business type.
Scope and Coverage	The Retail Sales Index covers, on a sample basis, the retail sales of retail businesses, wholesale businesses with sizeable retailing activity and the separate sales establishments of non-distribution enterprises. Excluded from the index coverage are the direct retail sales from non-distribution establishments together with the incidental retail sales of wholesale businesses. Also excluded are sales by hawkers, street stalls and other retailing activities not conducted from permanent business premises. The statistical unit used for reporting sales figures in this inquiry is the enterprise (i.e. complete business covering all branches).
Methodology	The business categories are based mainly on the Statistical Classification of Economic Activities in the European Community (NACE Rev. 1). The index system is structured on the retailing enterprises covered in the 2000 Annual Services Inquiry classified by 13 retail business categories and four turnover (excluding VAT) ranges¹. The value indices are calculated by updating the aggregate 2000 retail turnover (including VAT) of these enterprises in these fifty one cells using the monthly retail sales data provided by the enterprise respondent panel from 2000 onwards. The compilation of the index for a current month is based on the percentage change in average weekly sales in these cells over the corresponding monthly period of the previous year. The monthly volume indices are calculated by deflating the seasonally unadjusted value indices by specially constructed retail price indices derived from the Consumer Price Index (CPI). A copy of the Retail Sales Index methodology is available on our website (www.cso.ie).
Seasonal Adjustment	The seasonally adjusted series are updated twice yearly using patterns up to and including the preceding month. The present seasonally adjusted monthly value and volume series are based on seasonal patterns from January 1999 to December 2005. The duration is just sufficient for seasonal adjustment; the process will improve as the series is extended. The adjustments are completed by applying the X-11 Variant of the US Bureau of the Census Method 11 Seasonal Adjustment program based on individually selected multiplicative models. The unadjusted series, from which trading day variations have been eliminated, are available on our website (www.cso.ie).
References	A detailed description of the Retail Sales Index is available on the cso website www.cso.ie. Retrospective details covering three years are provided for all series on both a seasonally adjusted and an unadjusted basis in each issue of the Statistical Bulletin.

¹ The Department Stores business category is not classified by annual turnover but is sub-divided into three retail activity categories.
