

10

Agriculture and Fishing

- The number of agricultural holdings in 2007 was 128,200, less than a third of the number in 1855.
- In June 2008 there were 6.7 million cattle, 5.1 million sheep and 1.5 million pigs.
- The total area farmed in 2008 was 4.2 million hectares. Crops, fruit and horticulture accounted for 10% of that area, silage for 25%, hay for 6%, pasture for 49% and rough grazing for 11%.
- Between 1998 and 2008 agricultural output prices rose by 24.8%, while input prices rose by 67.6%.

Introduction

This chapter contains information on Irish agriculture. The statistics are mainly drawn from CSO surveys. The tables presented cover estimates of activity on farms (crop areas, livestock numbers and number of farm holdings); the price trends and values of agricultural inputs and outputs; and some detailed figures on Ireland's fishery sector.

Long term trends

Tables 10.1 to 10.3 present a historical review of farm activity since 1847. There has been a huge decrease in the area under crops, particularly oats and potatoes, reflecting a change from horse drawn transport and a more varied diet, especially increased consumption of meat. The number of farm holdings has declined from 419,500 in 1855 to 128,200 in 2007.

This decline is due to a number of factors: greater land ownership; increased mechanisation allowing larger farms to be operated; the migration of labour to urban areas and the change from subsistence farming to business farming. The number of horses and ponies decreased from 445,000 in 1847 to 95,700 in 2008. In contrast, the number of cattle has more than trebled, the number of pigs has almost trebled and the number of sheep has more than doubled.

Some recent trends

Cattle numbers increased during most of the 1990s, reaching a peak of 7.64 million in 1998, but have declined sharply since then.

Sheep numbers increased sharply during the late 1980s and early 1990s but have declined in recent years.

Income from farming

Table 10.6 shows the value of agricultural income (operating surplus). In 2008 cattle (28.6%) and milk (28.0%) accounted for 56.6% of goods output at producer prices.

The cost of farm inputs (intermediate consumption) rose by 30.4% over the period 2003 to 2008.

Agriculture price indices

Tables 10.7 and 10.8 show recent trends in the agricultural output and input price indices. In 2008, both the total outputs index and total inputs index were greater than in 1998. In particular, the input price indices for energy and fertilisers have increased substantially.

Fishery data

Tables 10.10 to 10.12 present information on fishing. Aquaculture accounted for 35% of the value of fishery production in 2004.

Technical Notes

Yield

The yield figures are given on a green (as harvested) basis.

Annual Work Unit

This is defined as 1,800 hours or more per annum. Holidays and sick leave are excluded.

Number of farms

A new methodology was introduced as part of the Census of Agriculture in 1991. The new results were generally consistent for crop areas and numbers of livestock. However, the more rigorous nature of the 1991 Census resulted in fewer farms than under the old methodology.

Tables 10.3 and 10.5

The number of sheep shown for the year 2000 differs from the total shown in the Census of Agriculture June 2000 publication. As explained in that publication, the Census figure for lambs was considerably less than a matched sample estimate. The difference was due to delayed response by some farmers to the Census. The CSO considers the matched sample estimate to be the best estimate of numbers in that category on 1 June 2000 and the data in the Yearbook incorporate that figure.

Table 10.4

In 2006, the EU formally adopted a reform on the EU sugar regime. This resulted in the end of sugar production in Ireland and a sharp drop in the area under sugar beet. From 2007 onwards, areas under sugar beet and fodder beet are being combined to give an overall figure for area under beet.

Table 10.6

The operating surplus figure is comprised of the operating surplus earned by farmers and that earned by agricultural contractors. The part earned by farmers is an approximation for the income indicator used under the old agriculture accounts methodology. It is calculated before deductions for interest payments on borrowed capital and before deductions for land annuities and for rent paid by farmers to landowners for the use of their land.

Table 10.10

From 2003 onwards prawn tails are included with Dublin Bay prawns.

Tables 10.13 and 10.14

Totals at State level differ slightly from the corresponding totals in table 10.6. The totals in table 10.6 are more recent estimates for which regional breakdowns are not yet available.
