Public Finance and Banking

- The General Government Balance was a record deficit of €49,599m in 2010 compared with a deficit of €22,694m in 2009.
- National Debt as a percentage of GDP fell from 87.7% in 1990 to a low of 19.8% in 2007. At end of 2010 it stood at 59.9%.
- The General Government Debt as a percentage of GDP fell from 94.2% in 1990 to a low of 24.7% in 2006, before rising rapidly again to 94.9% at the end of 2010.
- Credit advanced to Irish households continued to fall from €140bn in 2009 to €130bn in 2010.

Introduction

This chapter contains information on the Banking and Public Finance areas in the Irish economy. The source data on banking are principally drawn from the Central Bank of Ireland website with additional data provided by the Irish Stock Exchange. The statistics on public finance are obtained primarily from two administrative sources, namely the Department of Finance, (drawn from the Budget Book, Finance Accounts and Public Capital Programme publications) and the Revenue Commissioners' Annual Report. In addition, certain tables in the chapter contain data drawn from the CSO's National Income and Expenditure (NIE) publication.

Banking and finance

Statistics on banking and finance are given in the first four tables of this chapter. Tables 9.1 to 9.3 set out certain financial indicators such as details of domestic credit extended to Irish residents, the assets and liabilities of the Irish Monetary Sector and a breakdown of loans to and deposits held by the various sectors of the economy. Table 9.4 provides summary data relating to the Irish Stock Exchange (including the Government Securities Market).

Public finance

The public finance area is the subject of the remaining nine tables. Tables 9.5 and 9.6 examine the National and General Government Balances and Debt. Tables 9.7 and 9.8 detail the movements of all Exchequer receipts and issues. Table 9.9 provides a summary of National Debt while table 9.10 examines the Public Capital Programme. Tables 9.11 and 9.12 move to the areas of central and local government. Details are provided for receipts and expenditures, with expenditure being classified by purpose and economic category. Finally, table 9.13 details excise duty receipts.

Main trends in the tables:

- The balance sheet of the credit institution sector continued to decrease in 2010, a decline of €156bn in the year. Total assets were €1,168bn at the end of 2010.
- Domestic private sector credit decreased by €40bn to €335bn in 2010, with loans to non-financial corporations showing the largest decline of €53bn in the year.
- The General Government Balance was a record deficit of €49,599m in year 2010 compared with a deficit of €22,694m in 2009. These deficits included exceptional recapitalisation payments to Anglo Irish Bank, Irish Nationwide Building Society and the Educational Building Society of €31,575m and €4,000m respectively. €30,875m of the 2010 bank recapitalisation payments was made in the form of promissory notes; this €30,875m did not form part of the 2010 Exchequer Deficit of €18,745m (compared with €24,641m in 2009).

- National Debt as a percentage of GDP stood at 59.9% at end 2010, compared with 87.7% in 1990. Meanwhile the General Government Debt as a percentage of GDP was an estimated 94.9% at end 2010 compared with 94.2% in 1990. Note that the €30,875m in promissory notes paid to distressed financial institutions in 2010 forms part of General Government Debt but not National Debt.
- Capitalisation of the Irish Stock Market (based on equities included in ISEQ only) recovered slightly to €45.9bn at end 2010 when compared to end 2009.
- Outstanding indebtedness on the 2.2 million credit cards in issue at the end of 2010 stood at €2.9bn, a slight decrease on 2009 and a marked contrast to the growth in recent years.

Technical Notes

Table 9.1

Other Monetary Financial Institutions (MFIs) comprise financial institutions whose business is to receive deposits or close substitutes for deposits.

In line with Eurosystem requirements, demand accounts are classified as overnight deposits.

Table 9.2

The figures for the number of credit cards in issue represent credit cards issued by credit institutions resident in Ireland. Debit cards or store cards are excluded.

Typical Annualised Percentage Rate (APR) charged on credit cards is calculated as a simple non-weighted average of the advertised APR charged by the issuers on standard credit cards.

Table 9.3

Data on advances and deposits pertain to the main asset and liability categories of within-the-state offices of credit institutions, where the counterparty of the credit institution is a private-sector enterprise, irrespective of its legal form (corporation, partnership, sole trader, etc.).

The sectoral breakdown is based on the sector classification from NACE Rev. 2.

Table 9.4

The ISEQ Overall Index reproduced in this table covers all Irish registered equities quoted on the Official List, ITEQ and Developing Companies Markets including Northern Ireland companies.

Turnover is the sum of purchases and sales by stockbrokers' personal and corporate clients.

Amount raised is the cash value of funds raised by new issues of securities.

Capitalised value is the market value of all issues on the last trading day of each period. The price used to value each individual issue is the last trading price at close of business on the last trading day of a trading period.

Table 9.5

Total Exchequer Balance is the sum of current and capital budget balance. It is the traditional domestic budgetary aggregate which measures Central Government's net surplus or borrowing position. It is the difference between total receipts into and total expenditure out of the Exchequer Account of the Central Fund.

The General Government Balance (GGB) measures the fiscal performance of all arms of Government ie Central Government, Local Authorities, Health Boards (these were dissolved on 31 December 2004 and replaced by the Health Service Executive), Vocational Education Committees and non-commercial semi-state bodies, as well as funds such as the Social Insurance Fund and the National Pensions Fund which are managed by Government agents. It thus provides an accurate assessment of the fiscal performance of a more complete government sector.

The figures for General Government Balance are on an ESA79 basis up to 1996 and on an ESA95 basis thereafter. The figures for Current budget balance, Capital budget balance and total Exchequer balance are on an ESA79 basis for all years (ESA79 and

ESA95 refer to the 1979 and 1995 editions respectively of the European System of Accounts, which sets down standards for National Accounts).

The transition from total Exchequer balance (Irish Government definition) to the General Government Balance (EU definition) is explained by a series of adjustments:

- The EU definition excludes all flows between the Exchequer and non-commercial State agencies and between the agencies themselves.
- It also excludes loan and share capital receipts and expenditure.
- Payments in respect of prefunding of future pension liabilities (ie payments made by Government into the National Pensions Reserve Fund), while treated as expenditure for the purpose of calculating the Exchequer Balance do not have an impact on the GGB.
- Exchequer balance is compiled on a cash basis, whereas the General Government Balance is compiled on an accruals basis.

Table 9.6

National Debt is calculated in accordance with domestic conventions. Details are published annually in the Department of Finance's Finance Accounts and the report and accounts of the National Treasury Management Agency (NTMA). In calculating the National Debt, certain liquid assets held by the State are offset.

The General Government Debt is the standardised measure of indebtedness of EU governments. It takes account of all liabilities included in the National Debt, without any offsetting of liquid assets, together with the liabilities of non-commercial State agencies and local authorities. In addition it includes the build-up of accrued interest on certain government borrowings, in particular on small savings schemes such as Saving Certificates, Savings Bonds and National Instalment Savings.

Tables 9.5 and 9.6

For the calculation of the Current Budget Balance, Capital Budget Balance, and Total Exchequer Balance as percentages of GNP and General Government Balance as a percentage of GDP in table 9.5 and National Debt and General Government Debt as percentages of GDP in table 9.6, the GNP and GDP data used has FISIM allocated. FISIM stands for Financial Intermediation Services Indirectly Measured.

For the calculation of GDP National Income and Expenditure annual results for 2004 and subsequent years, the method of estimating and allocating the output of non-invoiced services produced by financial intermediaries (mostly banks) has been changed. Formerly, the margin earned on lending and borrowing was treated as intermediate consumption of a notional producer sector and so made no net contribution to GDP. The negative value of this notional sector was shown in the National Accounts publication as Adjustment for Financial Services. The revenue from the margin on lending and borrowing is FISIM. Some changes have been made to the method of estimating this item. In addition, and more significantly, it is now being assigned to the different customer sectors and, as for other services, adds to GDP if consumed by government, non-residents or households as consumers. For customers who are resident market producers, and in respect of borrowing for house purchase by owner-occupiers, the service is part of their intermediate consumption and has a neutral effect on GDP.
