

Overseas Travel Jan '09 - Jan '10

Trips to Ireland down 110,400 in January

Trips to Ireland by overseas residents for January 2010 were down 26% to 313,800 from January 2009, an overall decrease of 110,400. Visitors from Great Britain were down by 31.6% to 142,400 while trips to Ireland by residents of other Europe and North America decreased by 29.7% and 2.2% respectively. Trips from residents of other areas rose by 4.2%. *See Tables 1 and 2.*

The largest decreases from overseas visitors to Ireland were Great Britain (-65,900), Poland (-7,800), France (-7,000), Italy (-5,700) and Germany (-5,200). See Table 3.

Irish residents made 448,900 overseas trips in January 2010; this was 10.6% lower than the number that travelled in January 2009. *See Tables 1 and 2.*

The CSO “Airport Pairings” database contains information on every direct flight in and out of the nine Irish airports on a monthly basis. Data is available from January 2006 to January 2010. For details please go to <http://tinyurl.com/2nypw8>.

For more information, contact Jim Dalton at 021 453 5120 or Colm Noonan at 021 453 5463.

Background Notes

Periodicity	Monthly.
Scope	Overseas Travel.
Coverage	All Overseas Travel into and out of the Republic of Ireland.
Data Collection	The monthly Country of Residence Survey (CRS) forms the basis of the data used in this release. This survey is conducted at Dublin, Cork, Shannon, Knock and Kerry airports and Rosslare, Ringaskiddy, Dún Laoghaire and Dublin ports. Data from passengers is collected by a Central Statistics Office (CSO) interviewer.
Sample Design	<p>A sample of flights and sailings is selected for surveying. This selection is done to facilitate proper representation of airport/port pairings; day, night, week day and weekend flights/sailings.</p> <p>On the selected flights/sailings, a 1 in 5 (20%) systematic sample of passengers is selected and their country of residence is recorded.</p> <p>Sample results are grossed up to total passenger numbers travelling for each airport or port pairing, as provided by the airports and ferry companies.</p> <p>Where there is no coverage in a survey month for an airport/port pairing, results are imputed using the 'nearest neighbour' imputation methodology.</p>
Sample Size	The sample size for the January 2010 Country of Residence Survey was just under 16,000 passengers.
Reliability of Results	<p>Estimation of survey results using the above sampling design introduces a statistical variability which would not be present if <i>all</i> passengers from <i>every</i> flight/sailing had been interviewed. In some cases where ports/airports are unable to provide private/charter figures minor estimations are made. This means that the survey results cannot be taken as accurate to the full degree shown in this report.</p> <p>This variability is expressed by means of a standard error. The standard error gives the relative size of the 'sampling error' (variability) present in an estimate compared with the estimate itself. In general, estimates can be said to have a relative precision of twice their standard error.</p> <p>The effect of sampling error is relatively greater for small estimates and may, in particular, make it more difficult to compare figures for different time periods. Standard error estimates in respect of the major Area of Residence categories for the 2008 reference year are presented in the following table. In 2008, just over 468,000 persons were interviewed from a total of almost 33,838,500 journeys giving a sampling rate of 1.4%. The more detailed country figures in Table 3 would of course be subject to higher standard errors, as a percentage of the estimate.</p>

	Irish Trips Overseas	Great Britain	Other Europe	North America	Other Areas
Total trips	7,877,364	3,872,393	2,610,268	1,004,605	351,748
Standard error	14,687	11,186	10,211	5,683	4,196
Standard error as % of estimate	0.2	0.3	0.4	0.6	1.2

In general, the more detailed the classification provided the greater the standard error of the estimates. In the derivation of the results, the assumption was made that non-respondents had similar characteristics and activity levels to those respondents in the same stratification category. This assumption, which is usual in surveys such as this, may have resulted in some slight bias being introduced into the results. Moreover, although every effort was made to ensure that the information received during interview was correct in all respects, it is inevitable that some minor non-sampling errors remained undetected.

Seasonal Adjustment

Visitor numbers to Ireland are subject to a high degree of seasonality. These seasonal fluctuations do not affect annual comparisons but they do affect monthly or quarterly comparisons. Typically trips are at their highest during the summer months, although there are also clear peaks around Christmas and Easter. To facilitate interpretation of underlying trends visitor numbers are adjusted to remove these seasonal trends.

The seasonal adjustment method used is the X-11 Arima (Auto-Regressive Integrated Moving Average) variant of the US Bureau of the Census X-11 seasonal adjustment model. Each individual series is adjusted separately to capture the different seasonal patterns exhibited by each visiting group. Once a year, in January, seasonal factors are calculated and applied.

The X-11 Arima variant requires at least five years data. The present seasonally adjusted series are based on seasonal patterns from January 2000 to date. This duration is just sufficient for seasonal adjustment; the process will improve as the series is extended.

Definitions

(1) Trips

The data presented in this report is in terms of the number of 'Trips'. A 'Trip' is defined in simple terms as a journey (usually including the return) from one place to another.

(2) Visitor

The definition of 'Visitor' used in this survey is based on that adopted by Eurostat, the European Statistical Office. They define a Visitor as '*any person travelling to a place other than that of his/her usual environment for less than twelve months and whose main purpose is other than the exercise of an activity remunerated from within the place visited*'. However, as the Country of Residence Survey does not establish the reason for an individual's trip or length of stay, those travelling for reason of remuneration or for more than one year to this country cannot be excluded. Therefore, for the purposes of this survey, 'Trips' includes those travelling for remuneration in Ireland. Commercial Drivers travelling on sea routes are excluded.

(3) Country of Residence

Country of Residence is defined as the country in which a person has resided during the past year.

Country Breakdowns

Other Europe Tables 1-2 and 4

From January 2007 Other Europe includes the following Countries:

EU 27 i.e.

Austria	Latvia
Belgium	Lithuania
