Industrial Earnings and Hours Worked June 2000 (Final)

This release contains breakdowns by Sector according to NACE Rev 1. Retrospective estimates (using this sectoral classification) back to September 1995 are available on request.

	All Industries		
	Average earnings per hour	Average earnings per week	Average hours per week
	£	£	
June 1999	7.86	321.12	40.8
March 2000	8.12	330.18	40.7
June 2000	8.35	342.86	41.0
Quarterly change	+2.8%	+3.8%	+0.7%
Annual change	+6.2%	+6.8%	+0.5%

Average Industrial Earnings up 6.8% in year

Estimates of Industrial Earnings for June 2000 show that average weekly earnings of Industrial Workers in All Industries increased by 6.8% when compared with June 1999. Industrial hourly earnings rose by 6.2% in the same period.

Average weekly earnings of All Employees (Industrial, Clerical and Managerial) rose by 7.5% in the year to June 2000 (see Table 4). This rise consists of increases of 6.8% for Industrial Employees and 6.3% for Clerical and Managerial employees combined.

Background Notes

Introduction This release provides estimates of the average earnings and hours worked for all industrial workers in the state. The average earnings estimates for different categories of employees and sectors reflect different mixes of occupations and skills and do not therefore represent earnings for comparable work.

Methodology **Averages:**
The estimates of average weekly earnings, hourly earnings and hours worked are compiled by weighting the averages for all sample units in each NACE x Size cell (using 3 size categories 10-49, 50-99 and 100+ persons engaged) by estimated total employment in each of these cells.

Indices:

The corresponding indices are compiled using an annual chain-linked Laspeyres formula based on a matched respondent sample. The ratio of average earnings (or hours worked) in the current quarter over the previous September is calculated for 8 basic employee categories in each NACE x Size cell and combined for broader groupings using as weights estimated total earnings (or total hours worked) in the previous year. This system excludes the effects of changes in employment composition and industrial structure implicitly reflected in the corresponding absolute average earnings estimate. The indices, therefore, can be referred to as indices of underlying trends.

Changes from Previous Series:

Some minor methodological changes from the previous series to the new series have resulted in slight differences in estimates for retrospective periods. The methodological changes are:-

Sectoral Classification

The sectoral classification used in this series is NACE Rev 1, which is already being used for the Census of Industrial Production and the Monthly Production Index.

Employment Adjustment

In the previous series, adjustments were carried out at the level of the reporting unit in order to align employment estimates with those reported in the Census of Industrial Production. For the new series, this practice has been discontinued.

Weighting

In the previous series, the weights for the lowest size category (10-49 persons engaged) also reflected the employment of units with fewer than 10 persons engaged. The new series explicitly covers units with 10 or more persons engaged.

Definitions **Industrial Workers:**

This employment category includes operatives, maintenance workers, storekeepers, packers, cleaners, basic supervisory staff and apprentices.

Managerial Workers:

Administrative, managerial and technical workers are included in this category.

Clerical Workers:

This employment category includes clerical and other office staff and sales representatives.

Gross Earnings:

This is defined as the gross amount paid to employees before deduction of income tax, PRSI, etc. including overtime, service pay, shift and other allowances, commissions, production and regular bonuses, etc. Irregular bonuses, back-pay and redundancy payments are excluded.

Hours Worked:

These include the normal working hours of employees on holidays or sick-leave with pay; this ensures the compatibility of the earnings and hours worked data for the estimation of average hourly earnings. Overtime hours are included on the basis of hours actually worked.
