General Details

Introduction

A Census of Population was taken on the night of Sunday, 13 April 1986 in accordance with the Statistics (Census of Population) Order 1986 (S.I. No. 61 of 1986)¹. Copies of the Census questionnaire and of accompanying instructions are reproduced in Appendix 1 of Volume 1 of the detailed Census report.

This eighth and final volume of the detailed report is in two parts. Part I contains detailed classifications of the population by usual residence at Census date and one year prior to Census date while Part II contains tabulations according to birthplace.

With the exception of Table 1 the tables in Part I of this volume relate to the usually resident population in each area as analyses involving migration are obviously more meaningful when presented in this way. The tables in Part II (with the exception of Table 26) relate to the enumerated or *de facto* population as is the case in all the other Census Volumes for 1986.

The principal features of the 1986 Census results were published immediately they became available in two series of Local Population Reports. A complete list of all the published reports on the 1986 Census is given in Appendix 1.

Coverage

The Census figures relate to the *de facto* population – i.e. the population recorded for each area represents the total of all persons present within its boundaries on the night of Sunday, 13 April 1986, together with all persons who arrived in that area on the morning of Monday, 14 April 1986 who had not been enumerated elsewhere. Persons on board ships in port are included with the population of adjacent areas. The figures, therefore, include visitors present on Census night as well as those in residence, while usual residents temporarily absent from the area are excluded.

The date of the Census was chosen to coincide with a period when passenger movements were at a minimum and, consequently, the figures closely approximate to those for the normally resident population. Members of the Defence Forces who on Census night were serving abroad with the United Nations were excluded from the enumeration.

Conduct of the Census

The Census enumeration was carried out by a specially recruited temporary field force consisting of 327 fulltime supervisors and 3,221 part-time enumerators. The Census questionnaires were distributed during the three weeks immediately preceding the Census night and the collection of the completed questionnaires commenced the following day. The enumerators examined the questionnaires at the time of collection to ensure that they were correctly completed and, where necessary, they assisted householders in their completion.

Production of Results

Each enumerator prepared in the first instance a summary of the population in his/her Enumeration Area. These summaries formed the basis for the provisional 1986 population results issued in two Census publications² within months of the Census date. The completed questionnaires for the individual households were subsequently sent to the Census Office for processing.

The population summaries, dwelling listings and maps for individual Enumeration Areas were checked for consistency in County order and used to determine the boundaries of Census Towns and suburbs/environs of towns with legal boundaries. The first stage clerical scrutiny and computer processing of the entries for date of birth, marital status and relationship to head of household (questions 1–6) on the Census questionnaire proceeded concurrently in the same County order. These two operations combined allowed the publication of the first set of final Census results in a special series of Local Population Reports as individual counties were completed. These were issued over a seven month period commencing in July 1987. A summary report for the State was published in November 1987.

These operations also formed the basis of the first three volumes of the detailed Census report. The computer processing of the remaining information on the Census questionnaires provided the basis for a second set of Local Population Reports published between November 1988 and June 1989 and for the second Summary State Report issued in November 1989. This approach ensured that the principal Census results were published in a timely manner.

No. 142 of 1949) and the Statistics (Delegation of Ministerial Functions) Order 1983 (S.I. No. 13 of 1983).

Small Area Population Statistics (SAPS)

Small area population statistics for Urban Districts, Rural Districts, Towns, District Electoral Divisions, etc. from the 1986 Census are available on a commercial basis in two formats. One format contains detailed classifications of the population by age, sex and marital status and of households by size and by age, sex and marital status of the head of the household. Details of family units classified by size, age of youngest child, etc. are also provided.

The second format is more detailed and contains in addition classifications of the population by principal economic status, age and sex; classifications of persons at work by sex, employment status and broad industrial sector; classifications of persons at work, unemployed and retired by sex and occupational group; detailed classifications by socio-economic group, social class, age education ceased, ability to speak Irish, means of travel and distance travelled to work, etc.

Usual Residence

The figures for usual residents in a particular area include persons enumerated in that area who stated that their usual residence was at the place where they were enumerated, together with other persons usually resident in that area who were enumerated elsewhere in the State. Persons whose usual residence was elsewhere in the State (i.e. visitors to the area), are not included in the area of enumeration but are included in the area of their usual residence. Usual residents of an area who were not in the State on Census night were not enumerated at all in the Census and, therefore, are not included in the figures. Visitors to the State are also excluded.

Thus the analyses given in this report involving "usual residence one year ago" essentially relate to persons enumerated in the Census who changed their usual residence during the twelve month period prior to Census date.

The Census questions relating to usual residence were as follows:

USUAL RESIDENCE	
NOW	ONE YEAR AGO
If the person usually lives at this address write "Here". If not write the usual address in full. <i>For homeless persons write "No fixed abode".</i>	If the person's usual address one year ago was the same as that given at Q.9 write "Same". If not, write in full the usual address at that time. For children now under one year old, write "Under 1".

The following more specific instructions as to how the questions should be answered were given in the explanatory notes attached to the Census questionnaire:

- (i) *If an address in any part of Ireland (including Northern Ireland) is being given, make sure that the county of residence is stated. In addition, if the address is in a town, the name of the town should be given and if it is in a rural area, the townland name should be given. In every case, the full address should be given.*
- (ii) *If the address is outside Ireland, state the country of usual residence. For an address in Britain state the county or shire also.*
- (iii) *For school children who are away from home during term-time, the home address and not the term-time address should be regarded as the usual residence.*
- (iv) *For students at University, etc., who are away from home during term-time, the term-time address should be regarded as the usual residence.*
- (v) *For persons, temporarily in hospitals and other institutions, give the home address; homeless persons should be shown as having "no fixed abode".*
- (vi) *For persons with no settled address (e.g. Travelling People) write "None".*

Birthplace

The Census question relating to birthplace was as follows:

PLACE OF BIRTH
If born in Ireland state the county. If born elsewhere state the country.

The following instructions as to how the question should be answered were given in the explanatory notes attached to the Census questionnaire:

- (i) *Give the usual residence of mother at time of birth, not the location of hospital or nursing home where born.*
- (ii) *If born in any part of Ireland (including northern Ireland) give the name of the county of birth.*
- (iii) *If born outside Ireland, whether now resident in or visiting Ireland, state the country of birth.*

In the case of persons born in Ireland no attempt was made to distinguish those born in the County Boroughs from those born in the adjoining Counties. Such a distinction would, in any case, have been meaningless in view of the various extensions of County Borough boundaries which, in many cases, may have meant that a person's birthplace was outside a County Borough boundary when he was born, but inside it at the date of the Census.

It should be noted that the figures for foreign-born persons shown in the section on birthplace (Part II) (with the exception of Table 26) include visitors to the country as well as persons who are usually resident. Table 26 analyses the usual residents of the State by place of birth.

Occupation

All persons aged 15 years and over who were at work, unemployed (other than first job seekers) or retired were classified in the Census to their usual (or previous) principal occupation.

A person's occupational classification is determined by the kind of work performed in earning a living, irrespective of the place in which, or the purpose for which, it is performed. The nature of the industry, business or service in which the person is working has no bearing upon the classification of the occupation. For example, the occupation "clerk" covers clerks employed in manufacturing industries, commerce, banking, insurance, public administration, professions and other services, etc. The intermediate level of occupations used in the 1986 Census classification is given in Appendix 2, while the broad level of occupational groups is shown in Appendix 3.

Socio-Economic Group

The entire population was classified to one of eleven socio-economic groups plus a residual "unknown" group if sufficient details were not provided. The occupation assigned to each of the eleven groups are generally similar as regards the level of skill or educational attainment required. The socio-economic group of persons aged 15 years or over who were at work was determined by their occupation or in some cases by a combination of occupation and employment status. Unemployed or retired persons were classified by socio-economic group according to their former occupation.

Persons engaged in home duties or at school/college, who were members of a family unit, are classified to the socio-economic group of the person in the family on whom they were deemed to be dependent. Thus, if the head of a family was at work, unemployed or retired, dependent persons are assigned to his/her socio-economic group. If the head was neither at work, unemployed nor retired (e.g. never worked, permanently disabled, etc.) or if his/her occupation was not known, they are assigned to the socio-economic group of the principal earner in the family – if there was no such earner, they are assigned to the **unknown** socio-economic group. Other persons engaged in home duties or at school/college who were not members of a family unit, such as persons living alone or relatives of a head of household who were not members of the family unit (e.g. widowed grandparents, etc.), are assigned to the **unknown** group.

The socio-economic groups used in the Census, which are identical to those used in the 1981 Census, are as follows:

- 0 Farmers, farmers' relatives and farm managers
- 1 Other agricultural occupations and fishermen
- 2 Higher professional
- 3 Lower professional
- 4 Self-employed (with employees) and managers
- 5 Salaried employees
- 6 Intermediate non-manual workers
- 7 Other non-manual workers
- 8 Skilled manual workers
- 9 Semi-skilled manual workers
- X Unskilled manual workers
- Y Unknown

A detailed listing of the constituent occupations in each socio-economic group is given in Appendix 4.

Industry

The industry in which a person is engaged is determined (whatever the occupation) by the main economic activity carried out in the local unit at which he or she works. If, however, the local unit provides an ancillary service to another unit (e.g. administration, storage, etc.) in the business then the persons in the ancillary unit are classified to the industry of the unit it services. Thus, while the occupational classification is concerned only with the particular work performed by an individual regardless of the activity carried on at the local unit, the industrial classification is concerned only with the ultimate purpose of the unit or end product regardless of the precise nature of the work performed by each individual. A manufacturing or commercial unit may employ persons with many different occupations for the purpose of making a particular product or for giving a particular service. Conversely, there are cases in which particular occupations are largely confined to a single industry. For example, the majority of persons with agricultural occupations are in the agriculture industry and most miners are in the mining industry.

The term *industry* as used for Census of Population purposes is not confined to manufacturing industry. It is synonymous with the term "sector of economic activity". The basis of the industrial classification is, in the case of employees, the business or profession of their employer and in the case of self-employed persons the nature of their own business or profession.

The broad level of industry groups used in the 1986 census classification is given in Appendix 5.

Labour Force

The labour force comprises persons aged 15 years and over whose principal economic status is either at work, looking for first regular job or unemployed having lost or given up previous job.

The labour force and its constituent figures shown in this Volume are directly based on the Census. There are slight differences between the figures derived from the Census and the official mid-April 1986 Labour Force estimates which are contained in the annual series of Labour Force Survey reports.

Marital Status

Information on marital status was sought in the following format:

Commentary

Usual Residence and Migration

The total population enumerated at the 1986 Census of Population was 3,540,643. Of this total 3,524,620 persons were usually resident in the State and 16,023 (0.5 per cent) were usually resident in other countries. As indicated on page 9, usual residents of the State who were outside the country on Census night were not enumerated and thus their total number is not known. However in previous United Kingdom censuses, conducted on the same day as the census in Ireland (Republic), the number of persons whose usual residence at census time was given as Ireland (Republic) was of the order of 0.2 per cent of the population of Ireland (Republic).

Of the 3,524,620 persons usually resident in the State there were 92,995 who were not enumerated at their usual residence. About two thirds of these (60,583 persons) were enumerated in other private households while the remainder (32,412 persons) were enumerated in non-private households (e.g. hospitals, hotels, institutions, etc.).

Table A below analyses this sub-population of Irish residents who were not enumerated at their usual residence by age group, sex and marital status.

Table A Persons, usually resident in the State but not enumerated at their usual residence, classified by age group, sex and marital status

Widowed	—	1	10	15	23	68	163	863	2,549	3,150	6,842

It can be seen that nearly half of all persons not enumerated in their usual residence were in the 15-29 age group of whom about ninety per cent were single. Females accounted for 53.4 per cent of persons not enumerated in their usual residence.

In order to examine migratory movements i.e. the flow of persons who changed their usual residence during the year prior to Census date, we look at the total usually resident population aged one year and over (children under that age could not have had an address one year previously). Of the 3,463,597 persons aged one year and over, 3,245,569 (93.7 per cent) had not changed their address within the previous twelve months, 127,566 (3.7 per cent) had moved within the same county, 73,292 (2.1 per cent) had moved from one county to another and 17,170 (0.5 per cent) had come from outside the State. Of this latter number 8,215 (47.8 per cent) had been born in Ireland (Republic).

Counties

Table B analyses changes of residence during the twelve months preceding Census day of persons usually resident in each county. The number of persons, who one year previously were living at a different address, is shown together with the percentage that they form of the total population now usually resident in the County. Included in the total of those who one year previously were living at a different address are persons who moved within the same county in the last twelve months as well as those who moved into the county from another county or from another country. It can be seen that Dublin, with 8.7 per cent, had the highest percentage of persons who had changed address in the last twelve months while Wicklow and Kildare, two of the dormitory counties bordering on Dublin, contained the next highest percentages 7.3 per cent and 7.0 per cent respectively.

Table B Usually resident population aged one year and over in each county, number and percentage at different address one year previously, ranked in decreasing order of percentage at different address

*Including County Borough

More than 58 per cent of all persons in the State who changed usual residence in the previous twelve months moved within the same county. This percentage was highest in the case of Sligo (65.4 per cent) and Waterford (63.0 per cent). About a third of persons who changed their usual residence in the twelve months before census day moved between counties. This was most prevalent in Limerick (40.7 per cent), Dublin (38.8 per cent) and Kildare (38.4 per cent). Changes from the city to suburbs in the county are classified as changes within the one county. Approximately 8.0 per cent of all persons who changed usual residence in the past twelve months came to reside here from outside the State. There was little variation in this proportion among the counties listed in Table C. The percentage of persons who changed residence in the previous twelve months by coming to live here from outside the State and who were born in Ireland was 3.8 per cent. This latter percentage varied in Table C from 2.4 per cent for Kildare to 4.0 per cent in Galway.

Table D shows for each county and county borough the gross population gains and losses due to movements in usual residence between counties and county boroughs. The net population effect is also shown in the final column.

A net population gain because of these internal migratory movements was experienced in Dublin (excluding Dublin County Borough) and in Kildare, Meath and Wicklow, counties which serve as dormitory areas for Dublin. A large net loss of over 3,000 was experienced by Dublin County Borough.

In Munster these internal migratory movements resulted in net population gains in counties Cork and Limerick and in Waterford County Borough. With the exception of Galway County Borough all the counties of Connacht and Ulster (part of) experienced population losses due to internal migration.

*Ten persons or less

In the case of males the overall percentage who changed residence in the twelve months to Census date was 6 per cent. This overall percentage was composed of much higher percentages in the younger age groups and lower percentages in the older age groups. The 20-24 and 25-34 year age groups had the highest percentages of males who had changed residence with 13 per cent and 11 per cent respectively having moved residence within the State in the relevant twelve month period. Within these age groups married males accounted for the largest percentages of persons who changed residence probably due in large part to changes of residence on marriage.

In the older age groups the percentage of males who changed residence was very low with only slightly over 2 per cent of such persons in both the 45–64 year age group and the 65 years and over age group.

In the case of males who came to live here from outside the State in the twelve months before Census date the highest percentages of such persons were in the 20–24 year age group and the 25–34 year age group also.

The pattern of movement for females was similar to that for males. The overall percentage of those who changed address within the twelve months before the Census (6.6 per cent) was again accounted for by high proportions in the younger age groups and low proportions in the older age groups.

The 20–24 year age group contained the highest percentage of females (20.3 per cent) who had changed residence during this period. While married females registered the highest percentage in this age group a significant percentage of single females (16.4 per cent) also moved address in the twelve months before the Census. This latter figure was much higher than the corresponding figure for single males in this age group.

Males and females in the 25–34 year age group exhibited roughly similar levels of overall mobility i.e. 11.5 per cent of males changed usual residence compared with 11.8 per cent of females. Single females were the most mobile in this age group with 14.0 per cent changing their usual residence, whereas married men were the most mobile amongst the males with 12.9 per cent recording a change.

The 20–24 and 25–34 year age groups also contained the highest percentages of males and females who had come to live here from another country in the previous twelve months.

Table G analyses the age and marital status structure of persons who came to live here from outside the State during the twelve months prior to the 1986 Census date.

Of the total of 17,170 usually resident persons whose usual residence one year before the census was outside the State, 8,273 were males and 8,897 were females. The 25–34 year age group contained 4,428 or 25.8 per cent of these persons. There were 3,148 children under 15 years who came to reside here from another country in the year prior to Census date. Most of these are likely to be the children of the 6,365 migrant married persons who came to reside here, 71 per cent of the latter being under 45 years of age.

The group with the highest percentage of persons who changed residence was professional and technical workers (14.7 per cent). This compares with an overall figure of 6.3 per cent for all occupational groups. Clerical workers had the next highest percentage of persons who changed residence (11.6 per cent) and these were closely followed by service workers (11.1 per cent) and other workers (10.2 per cent). At the other end of the scale agricultural workers had the lowest percentage (1.9 per cent); labourers and unskilled workers also had a low percentage (5.7 per cent).

Professional and technical workers had the highest percentage of persons who came to live here from outside the State (1.6 per cent). The "Other" miscellaneous category had the next highest percentage of such persons (1.0 per cent) followed by service workers (0.9 per cent). In general, the higher professional and skilled workers showed greater mobility than the less skilled and agricultural workers.

Birthplaces

Of the total population of 3,540,643 persons enumerated in the country in 1986, 2,676,045 (75.6 per cent) were enumerated in their county of birth. A further 640,598 persons (18.1 per cent) of the population were enumerated in another county while 36,538 (1.0 per cent) persons were born in Northern Ireland. A total of 141,254 persons (4.0 per cent) were born in Great Britain while 46,208 persons (1.3 per cent) were born in other countries.

The numbers and percentage distribution of the population by place of birth for 1971, 1981 and 1986 are given in Table I. The proportion of the total population enumerated in their county of birth declined from 80.6 per cent in 1971 to 75.6 per cent in 1981 and stabilised at this level in 1986. On the other hand persons enumerated in counties other than their county of birth increased both in number and as a percentage of the total population: rising rapidly from 442,000 or 14.8 per cent of the population in 1971 to 606,000 or 17.6 per cent in 1981 and less rapidly in the most recent intercensal period to 641,000 or 18.1 per cent in 1986. The numbers born in Great Britain increased from 84,000 in 1971 (2.8 per cent of the population) to 146,000 (4.3 per cent of the population) in 1981 and subsequently declined to 141,000 (4.0 per cent of the population) in 1986. Similarly the numbers born in other countries, outside Great Britain and Northern Ireland also rose sharply between 1971 and 1981 and stabilised thereafter. This latter group accounted for 46,000 persons in 1986 compared to 27,000 in 1971.

Table J compares county of enumeration and county of birth in 1981 and 1986. In the first two columns the percentage of persons enumerated in each county who were born in another county is shown while the third and fourth columns shows the percentage of persons born in that county who were enumerated in another county. The counties are ranked in increasing order of the 1986 percentages shown in the fourth column; the final column of the table shows the population of each county in 1986.

In general it can be seen that in lesser populated counties e.g. Leitrim, Roscommon, Westmeath and Longford a higher percentage of persons born there were enumerated outside the county while a much higher percentage of the persons born in the more populated counties, such as Dublin and Cork, are enumerated in the same county in later years. These figures represent the overall long-term effect of migration as distinct from the experience of one particular year which was analysed earlier on in this Commentary. It can also be seen from Table J that in all counties outside of Dublin and Carlow a higher percentage of the persons enumerated in them were born in another county in 1986 as compared with 1981 thus indicating, generally, an increasing level of movement in the population over the five year period 1981–1986.

*County and County Borough

The counties with the highest percentage of persons born in another county were Kildare, Wicklow and Meath where 40–45 per cent of the persons enumerated were born in another county. By contrast, the counties with the lowest percentages of their population born in other counties were Donegal (6.3 per cent), Cork (9.3 per cent), Kerry (11.1 per cent) and Mayo (11.1 per cent).

* The coding of usual residence for towns located in County Dublin (excluding the Greater Dublin Area) was on the basis of district electoral division only. Because it was not possible to accurately define the following towns in terms of DED's it has been decided to omit them from this table: Balbriggan, Lucan, Lusk, Portrane, Rathcoole, Skerries and Swords.

* The coding of usual residence for towns located in County Dublin (excluding the Greater Dublin Area) was on the basis of district electoral division only. Because it was not possible to accurately define the following towns in terms of DED's it has been decided to omit them from this table: Balbriggan, Lucan, Lusk, Portrane, Rathcoole, Skerries and Swords.
