Appendix

1991 Census reports published	131
-------------------------------	-----

General Details

Introduction

A Census of Population was taken on the night of Sunday, 21 April 1991, in accordance with the Statistics (Census of Population) Order 1991 (S I No 62 of 1991)¹ A copy of the census questionnaire including the explanatory notes which accompanied it is reproduced in Appendix 1, Volume 1 of the detailed census report

This eleventh and final volume of the detailed report contains tables relating to travel to work, school and college and car usage

The territorial divisions of the country distinguished in this report are defined in Appendices 3-8 of Volume 1

Coverage

The census figures relate to the *de facto* population i.e. the population recorded for each area represents the total of all persons present within its boundaries on the night of Sunday, 21 April 1991, together with all persons who arrived in that area on the morning of Monday, 22 April 1991, not having been enumerated elsewhere Persons on board ships in port are included with the population of adjacent areas The figures, therefore, include visitors present on census night as well as those in residence, while usual residents temporarily absent from the area are excluded

The date of the census was chosen to coincide with a period when passenger movements were at a minimum and, consequently, the figures closely approximate to those for the normally resident population Members of the Defence Forces who on census night were serving abroad with the United Nations were excluded from the enumeration

Conduct of the Census

The census enumeration was carried out by a specially recruited temporary field force consisting of 334 full-time supervisors and some 3,200 part-time enumerators The census questionnaires were distributed during the three weeks immediately preceding the census night and the collection of the completed questionnaires commenced the following day The enumerators examined the questionnaires at the time of collection to ensure that they were correctly completed and, where necessary, they assisted householders in their completion

Production of Results

Each enumerator first prepared and returned to the Central Statistics Office a summary of the population in his/her enumeration area These summaries formed the basis for the preliminary 1991 population results issued in three census publications within months of the census date² The completed questionnaires for the individual households were subsequently transmitted to the Central Statistics Office for processing

The population summaries, dwelling listings and enumeration maps for individual enumeration areas were checked for consistency in county order and used to determine the boundaries of census towns and suburbs/environs of towns with legal boundaries The first stage clerical scrutiny and computer processing of the entries for date of birth, marital status and relationship to head of household (questions 1-6) on the census questionnaire proceeded concurrently in the same county order These two operations combined allowed the publication of the first set of final census results in a series of Local Population Reports which were issued on a county-by-county basis immediately results became available (see Appendix) A summary report for the State was issued in April 1993

The derived first phase computer file formed the basis for three volumes of the detailed census report covering Areas, Ages and Marital Status and Household Composition and Family Units The computer processing of the remaining information on the census questionnaires enabled the publication of a second series of Local Population Reports covering place of birth, religion, Irish speakers, usual residence, car usage and household characteristics

A complete list of the reports on the 1991 Census published is given in the Appendix

¹ Made by the Taoiseach in pursuance of powers conferred on him by sections 11 and 16 of the Statistics Act, 1926 and the Statistics Acts, 1926 and 1946 (Transfer of Ministerial Functions) Order 1949 (S I 142 of 1949)

² Census of Population of Ireland, 1991
Preliminary Population Figures (PI 8176), June 1991
Preliminary Report - Areas (PI 8248), July 1991
Preliminary Report - Age Groups (PI 8447), November 1991

Small Area Population Statistics (SAPS)

Small area population statistics (SAPS) for Urban Districts, Rural Districts, Towns, District Electoral Divisions, etc from the 1991 Census are available on a fee basis

The SAPS contain detailed classifications of

- the **population** by age, sex and marital status,
- **households** by type, size and by age, sex and marital status of the head of the households,
- **family units** by size and age of youngest child,
- the **population aged 15 years and over** by principal economic status, age and sex;
- **persons at work** by sex, employment status and broad industrial sector;
- **persons at work and unemployed** by sex and occupational group,
- the **entire population** by socio-economic group and social class

Detailed classifications by means of travel and distance travelled to work, education, ability to speak Irish, religion and housing characteristics, etc. are also provided

Results for Travel to Work, School and College in 1981 and 1986

Two sets of previously unpublished tables relating to travel to work, school and college are available from the 1981 and 1986 Censuses of Population. Copies of these tables may be purchased directly from the Central Statistics Office (price £10 per set)

Definitions

Means of travel to work, school or college

The means of travel was determined for all persons at work or attending school or university full-time on the basis of responses to the following census question

TRAVEL TO WORK, SCHOOL or COLLEGE			
MEANS OF TRAVEL			
Indicate the usual means of travel to work or school by inserting ✓ in the appropriate box If the person works at home (e g farmer, shopkeeper living on the premises, etc) please insert ✓ in Box 11 (See Notes)			
Q. 14			
On foot	☐ 1	Motor cycle	☐ 6
Bicycle	☐ 2	Motor car (driver) . .	☐ 7
School bus	☐ 3	Motor car (passenger)	☐ 8
Other bus	☐ 4	Lorry, van .	☐ 9
Train . .	☐ 5	Other means	☐ 10
		None . .	☐ 11

The following more specific instructions as to how the question should be answered were given in the explanatory notes attached to the census questionnaire

This question and question 15 should be answered in respect of any person who is at work or who is attending school, university, etc full-time Leave blank for other persons (e g those engaged in home duties, retired persons, children not yet at school) Particulars given should relate to the outward journey

- (i) *If the person regularly uses some means of transport to a fixed place of work or to school, the principal means of transport (e g. bus, train, motor car, motor cycle, bicycle, lorry, van) should be indicated*
- (ii) *If the person walks to work or school, indicate "On foot"*
- (iii) *If the person uses more than one means of transport to work or school, indicate only the means by which the longest distance is travelled*
- (iv) *If the person uses different means of transport on different days, indicate the means used most often*
- (v) *For persons working daily from a fixed centre or depot, such as certain transport workers, indicate the means of transport to this centre or depot*
- (vi) *For school children, etc , resident in schools and colleges, indicate "None"*

Distance travelled

In addition to the means of travel to work, school or college a question on distance travelled was formulated as follows .

TRAVEL TO WORK, SCHOOL or COLLEGE
DISTANCE
State, to the nearest mile, the distance travelled from residence to place of work, school or college (See Notes)
Q. 15

The explanatory notes contained the following instructions

- (i) *For persons working daily from a fixed centre or depot, indicate the distance travelled from residence to this centre or depot.*
- (ii) *For persons with no regular place of work such as sales representatives, road workers and others who do not work at or from a fixed centre or depot, write "None"*

Address of place of work, school or college

Persons aged 15 years and over who were at work, school or college were asked to specify the relevant address as follows

ADDRESS OF PLACE OF WORK, SCHOOL or COLLEGE
Give full and exact address at which actually working or at which attending school or college If working from a fixed centre or depot give that address
If working at home (e g farmer, shopkeeper living on premises) write "At Home"
For persons with no fixed place of work (e g Commercial Traveller) write "None". (See Notes)
Q. 23

The detailed instructions in the explanatory notes were as follows

This question should be answered in respect of each person, aged 15 years or over, who is at work, at school or at college Give full and exact address at which actually working or at which attending school or college The address at which working is required, not the headquarters or head office of an employer, if this is different.

- (i) *For persons who work from a fixed centre or depot, give that address*
- (ii) *For persons who work mainly at home, i e farmer, shopkeeper living on premises, etc. write "At home"*
- (iii) *For persons with no fixed place of work such as sales representatives, road workers and others who do not work at or from a fixed centre or depot, write "None"*

Addresses in the following areas were coded to **District Electoral Division (DED)/Ward** on the basis of street listings

- Dublin County Borough
- Dublin-Belgard
- Dublin-Fingal
- Dun Laoghaire-Rathdown
- Cork County Borough and suburbs
- Limerick County Borough and suburbs
- Waterford County Borough and suburbs
- Galway County Borough

For the remaining areas of the country, addresses were coded to **Towns** based on the listing of towns set out in Table 20 of Volume 1 of the 1991 Census of Population. A residual category "elsewhere in the county" was used for addresses located outside the relevant towns specified for a county.

It should be borne in mind that the quality of the coding depended to a large extent on the accuracy and completeness of the addresses provided in response to Q 23. Particular difficulties arose where a street was included in two or more DEDs/Wards or where there were multiple choices for a given address (e.g. the Wards of Crumlin A, B, C, D, E and F). The lowest level of detail distinguished for place of work in the present report is County and County Borough (see Tables 29 and 30).

Motor cars

A question on the number of motor cars used exclusively by persons usually resident in households was formulated as follows

33. MOTOR CARS

State how many motor cars are used exclusively by persons usually resident in the household (include company cars kept at home). If none insert "**None**"

Towns

In the relevant tables in this Volume, towns include suburbs or environs where appropriate (see Appendix 3 of Volume 1 of the detailed census report).

The coding of usual residence for towns located in County Dublin was on the basis of District Electoral Division only. Because it was not possible to accurately define certain towns in terms of District Electoral Divisions (DEDs) they were omitted from tables showing towns of usual residence. These towns are Swords, Malahide, Skerries, Portrane, Kinsealy-Drinan and Lusk.

Aggregate Town/Aggregate Rural

The Aggregate Town area comprises population clusters of 1,500 or more inhabitants. The remaining areas are termed Aggregate Rural. Because of the definitional difficulties mentioned above, the towns of Swords, Malahide, Skerries, Portrane, Kinsealy-Drinan and Lusk are included in the Aggregate Rural area. In the Commentary which follows, the terms Urban and Rural are used in place of Aggregate Town and Aggregate Rural, respectively.

Age groups

Persons attending school or college (Box 4 of Question 19) are classified according to the age groups 5 to 12 years, 13 to 18 years and 19 years and over. These age groups are approximations for persons attending primary schools, secondary schools and third level colleges, respectively.

Commentary

Means of travel to work

Table A classifies persons at work by means of travel to work (in percentage terms) in 1981, 1986 and 1991

Table A Means of travel to work, 1981, 1986 and 1991

Means of Travel	1981	1986	1991
	%	%	%
On foot	13.4	12.6	11.1
Bicycle	4.2	5.6	4.4
Bus	9.7	8.6	7.7
Train	1.3	1.5	1.7
Motor cycle	1.6	1.4	1.1
Car driver	36.0	37.2	38.9
Car passenger	8.1	8.3	8.0
Other (incl. lorry or van)	2.1	3.1	4.0
None	19.5	17.2	19.8
Not stated	4.1	4.5	3.2
Total	100 -	100 -	100 -

Driving to work by car was the principal means of travel in each of the years 1981, 1986 and 1991. The relative importance of this category increased from 36.0 per cent in 1981 through 37.2 per cent in 1986 to 38.9 per cent in 1991.

Bus usage as a means of transport to work declined over the same period. Although the percentage share which trains accounted for increased slightly between 1981 and 1991, the increase was not sufficient to off-set the decline in the use of buses as a means of travel to work. In total, usage of bus or train declined from 11 per cent in 1981 to 9.4 per cent in 1991.

The proportion of workers either walking to work or travelling by motor cycle also experienced a steady decline during both intercensal periods.

Figures 1a and 1b show the proportions of male and female workers who travelled to work as car drivers and car passengers, respectively, in 1981, 1986 and 1991.

Figures 1a and 1b Percentage of workers travelling to work by car, 1981, 1986 and 1991

Figure 1a: Car driver

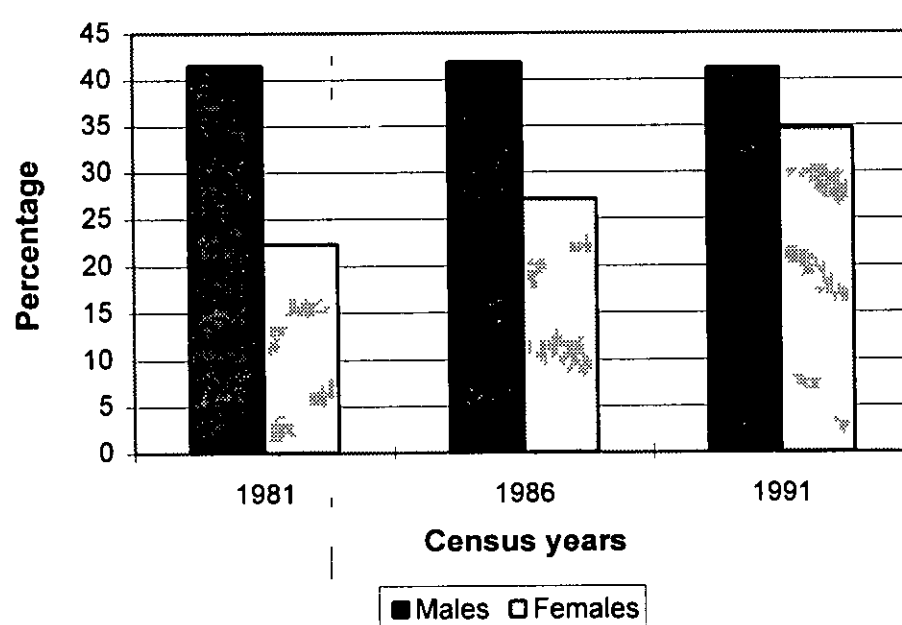

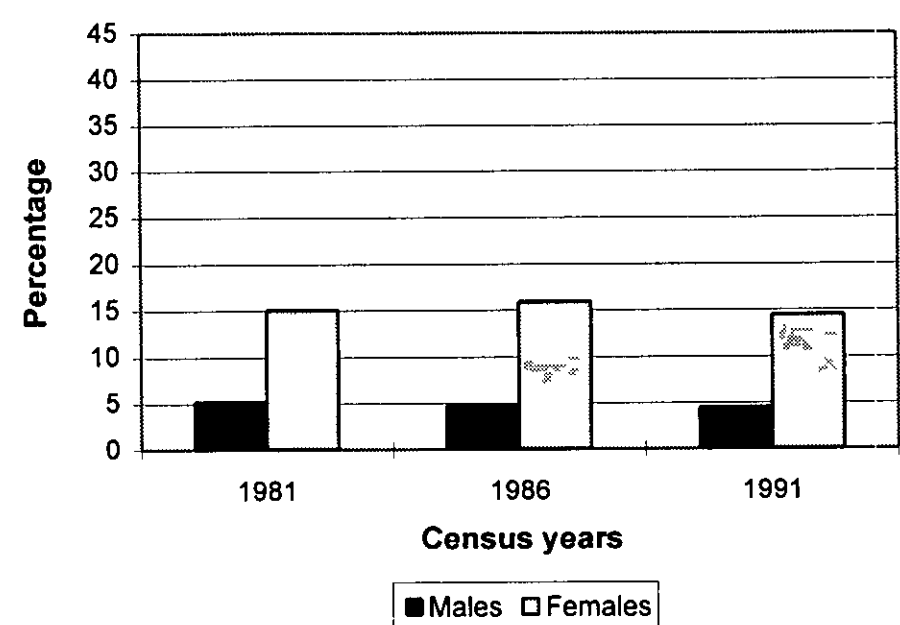

Figure 1b: Car passenger

Proportionately more males than females drove to work in each of the three years. The converse was true for workers travelling by car as passengers. The percentage of female workers who drove to work increased

steadily over the ten year period 1981-1991 (from 22.3 per cent to 34.7 per cent) while the relevant male percentage remained fairly static at around 41 per cent

Nearly one in two women workers travelled to work by car either as a driver or as a passenger in 1991. In percentage terms car usage by female workers overtook that of male workers between 1986 and 1991.

Table B indicates the extent to which workers travelled on foot, by bus or train in 1981, 1986 and 1991.

Table B Percentage of workers travelling to work on foot, by bus or train, 1981, 1986 and 1991

Year	On foot	Bus	Train
	%	%	%
Males			
1981	10.2	6.5	1.1
1986	9.5	5.7	1.3
1991	8.0	4.9	1.4
Females			
1981	21.4	17.7	1.6
1986	19.0	14.8	1.9
1991	16.8	12.9	2.4

A larger percentage of women travelled to work on foot, by bus or train in each of the years 1981, 1986 and 1991. Bus usage declined steadily in relative terms, however, over the ten year period 1981-1991 while train usage experienced a moderate increase. Walking to work became less popular for both males and females during the course of the two intercensal periods.

Means of travel to school or college

Table C sets out the means of travel to school or college in 1991 in percentage terms for each of the three age categories corresponding to students at primary, secondary and third level education.

Table C Means of travel to school or college, 1991

Means of Travel	Primary (aged 5-12 years)	Secondary (aged 13-18 years)	Third level (aged 19 years and over)
	%	%	%
On foot	39.4	28.6	28.8
Bicycle	4.2	13.1	17.9
Bus	20.7	35.6	24.9
Train	0.1	1.4	7.3
Motor cycle	-	0.1	1.0
Car driver	-	0.2	4.9
Car passenger	27.7	14.1	8.1
Other (incl. lorry or van)	0.5	0.4	0.6
None	0.2	1.8	2.3
Not stated	7.1	4.9	4.1
Total	100 -	100 -	100 -

Nearly four out of ten primary school-children travelled to school on foot in 1991, over a quarter were driven to school by car while one in five travelled by bus.

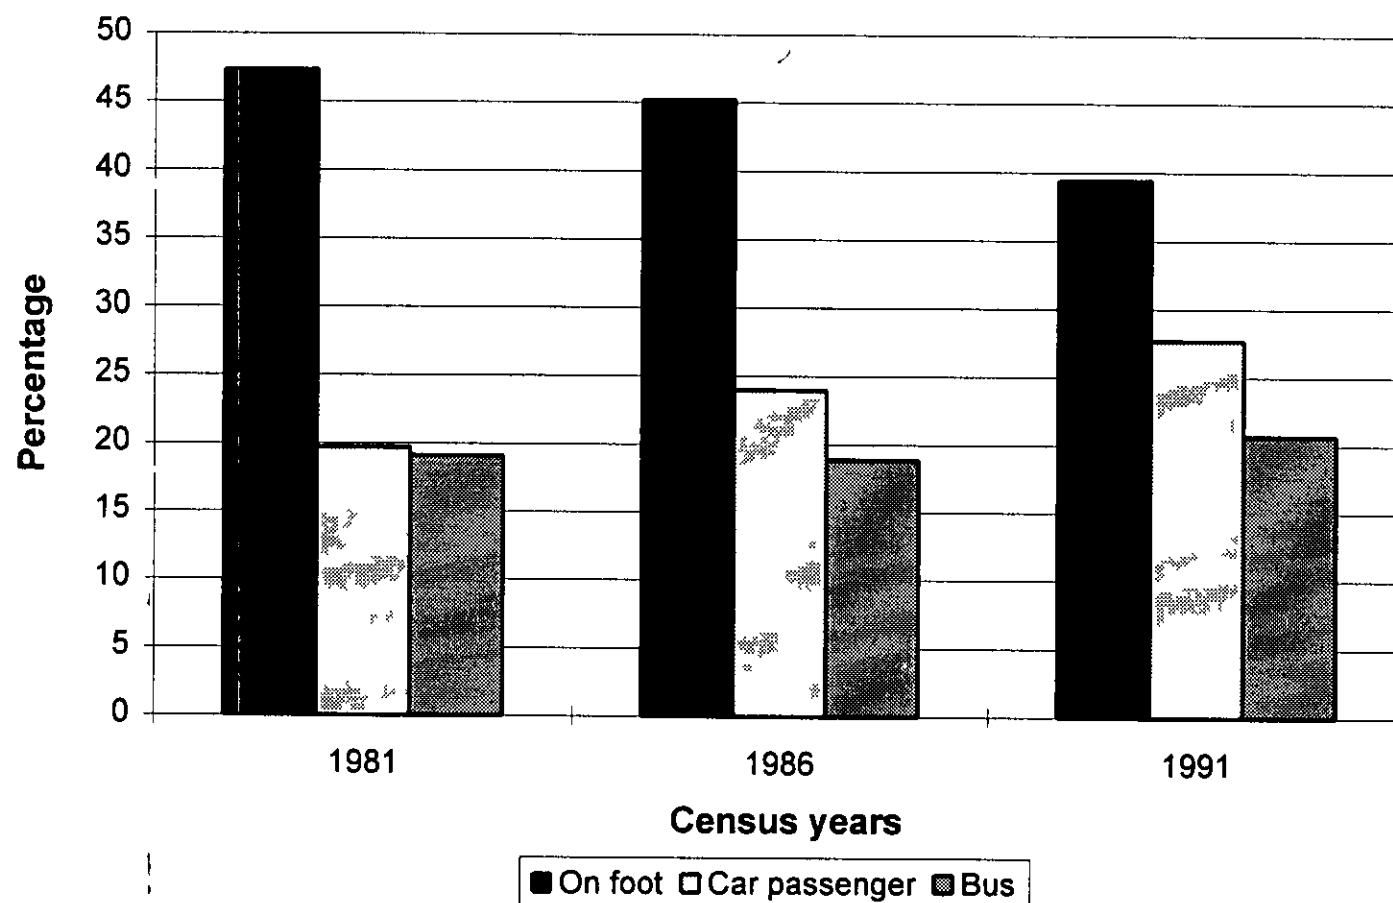

Bus was the main means of travel used by secondary school students in 1991 and was used by over one in three students. While the proportion of secondary school students who walked to school was less than that for primary pupils, it was still significant at 28.6 per cent, indicating that nearly three in ten secondary students

attended a school within walking distance of their homes. A further 13 per cent of secondary students used a bicycle to travel to school.

More third level students walked to college in 1991 than used any other means. A quarter of them travelled by bus while over one in six cycled.

Figure 2 shows the percentage of primary school-children travelling on foot, as car passengers and by bus in 1981, 1986 and 1991.

Figure 2 Percentage of primary school-children (aged 5-12 years) travelling to school on foot, as car passengers or by bus in 1981, 1986 and 1991

The percentage of primary school-children who walked to school declined from 47.3 per cent in 1981 through 45.2 per cent in 1986 to 39.4 per cent in 1991. During the same period the proportion being driven by car increased from 19.7 per cent through 24.0 per cent to 27.7 per cent. Bus usage also increased during the same period from 19 per cent in 1981 and 1986 to 20.7 per cent in 1991.

Distance travelled to work

Table D gives the average distance travelled from home to workplace by workers living in urban and rural areas in 1981, 1986 and 1991.

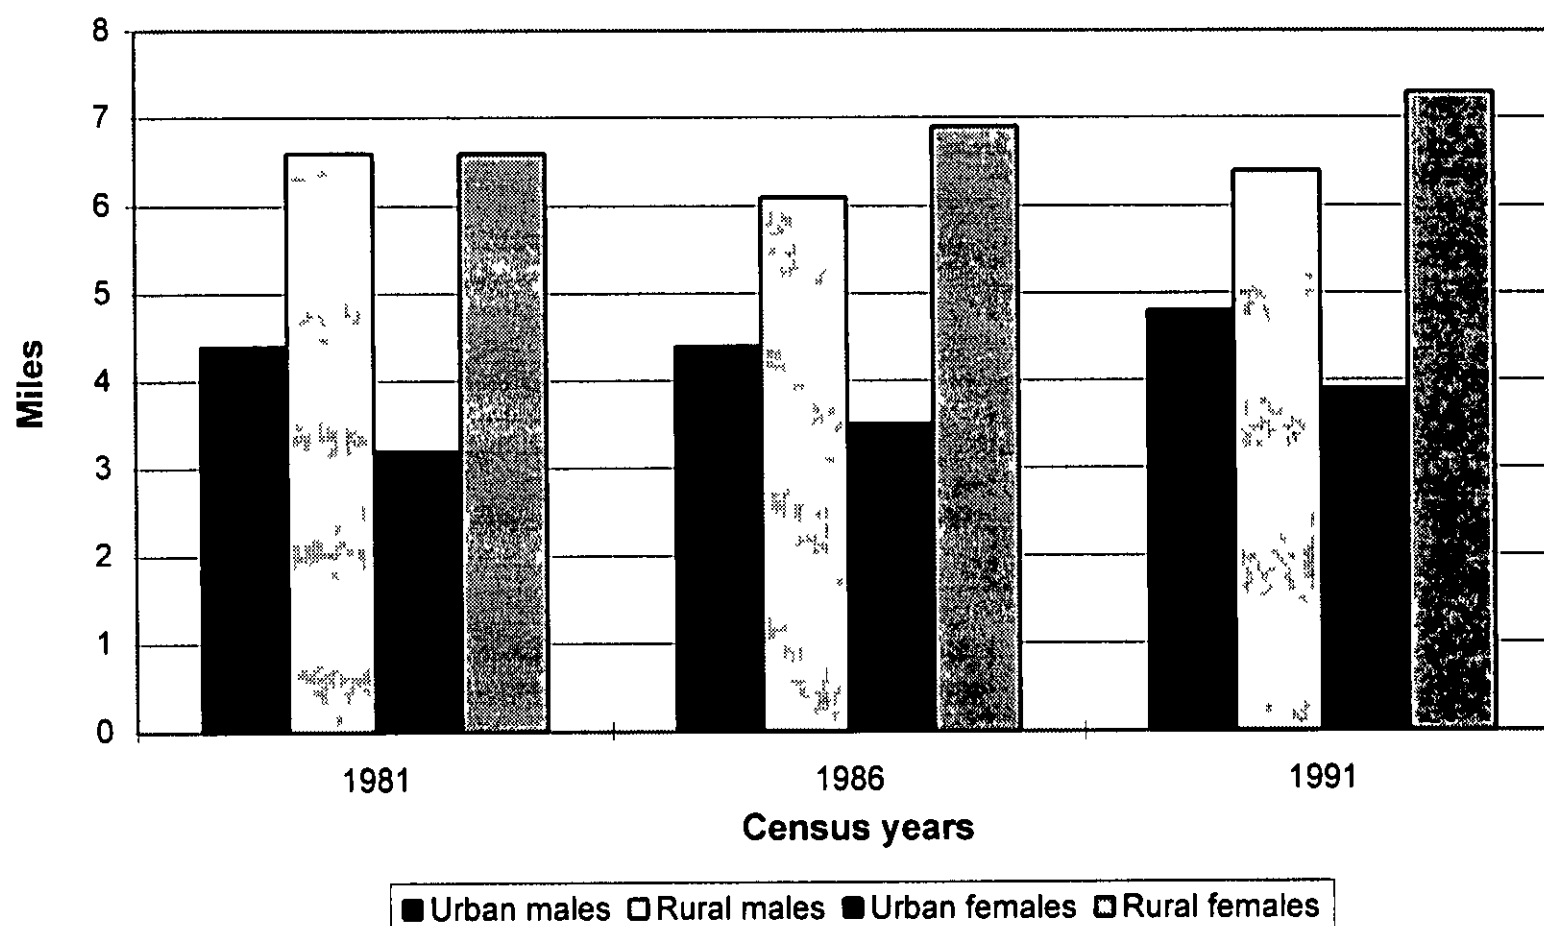

Table D Average distance in miles travelled to work in urban and rural areas in 1981, 1986 and 1991

Year	Average distance travelled to work (miles)		
	State	Urban	Rural
1981	4.2	4.0	4.5
1986	4.4	4.1	4.8
1991	4.8	4.4	5.3

The average length of journey undertaken by workers in travelling from their homes to their workplaces saw a gradual increase in the ten year period 1981-1991. The urban/rural comparisons are likely to be distorted by the inclusion in the rural figures of farmers who did not undertake a journey to work. While the distortion is diminishing over time according as the number of farmers is declining, nevertheless, a more meaningful picture is presented by excluding farmers from the rural data.

Figure 3, which excludes farmers, shows the average distance from residence to place of work for males and females in urban and rural areas in 1981, 1986 and 1991

Figure 3 Average distance in miles travelled by male and female workers (other than farmers) in urban and rural areas in 1981, 1986 and 1991

The average distance travelled to work by female workers has risen steadily between 1981 and 1991 in both urban and rural areas. The trend for male workers has been variable. In urban areas the average distance travelled remained constant between 1981 and 1986 and increased from 4.4 miles to 4.8 miles between 1986 and 1991. In rural areas the distance travelled to work by males declined between 1981 and 1986, and experienced a recovery between 1986 and 1991.

Average distances travelled to work in rural areas exceeded those in urban areas by between a third (males in 1991) and over 100 per cent (females in 1981). On average, female workers in rural areas travelled further to work than their male counterparts. The opposite was the case in urban areas.

Distance travelled to school or college

Table E gives the average distance travelled by primary, secondary and third level students in urban and rural areas in 1981, 1986 and 1991.

Table E Average distance in miles travelled by students in urban and rural areas in 1981, 1986 and 1991

Educational Level	Average distance travelled to school or college (miles)		
	State	Urban	Rural
Primary (5-12 years)			
1981	1.5	1.1	2.1
1986	1.5	1.1	2.1
1991	1.5	1.1	2.1
Secondary (13-18 years)			
1981	3.3	1.8	5.1
1986	3.3	1.9	5.1
1991	3.6	2.0	5.5
Third level (19 years and over)			
1981	4.6	3.8	8.9
1986	5.0	3.9	9.7
1991	5.7	4.5	10.7

The stability of the average distances travelled by primary school-children during the ten year period 1981-1991 underlines the fact that most of these children attended schools which were situated in close proximity to their homes. Children in rural areas travelled on average one mile more to school than their urban counterparts in 1981, 1986 and 1991.

The difference between urban and rural based school-children in terms of distance travelled to school widened at secondary school level. In 1991, secondary school-children in rural areas travelled 5.5 miles to school compared with 2.0 miles for urban school-children. The period 1986-1991 witnessed a slight increase in the distance travelled to secondary schools.

Students in third level colleges undertook the longest journeys of all those in full-time education. The length of journey also increased steadily from an average of 4.6 miles in 1981 to 5.7 miles in 1991. Third level students living in rural areas travelled more than twice the distance of those located in urban areas.

Car ownership

Meath (78.0 per cent) had the highest proportion of households with at least one car in 1991 followed by Dublin-Fingal (77.1 per cent) and Dun Laoghaire-Rathdown (76.1 per cent). At the other end of the scale Dublin County Borough (44.5 per cent) had the lowest car ownership followed by Limerick County Borough (46.2 per cent).

Nearly three quarters of rural households had at least one car in 1991 compared with six out of every ten urban households, underscoring the importance of car ownership in more dispersed rural locations.

Households in which the head was a member of the higher professions had the highest car ownership rate (92.2 per cent) of all socio-economic groups in 1991. Employers and managers (91.3 per cent) followed closely. Less than one out of every two households in which the head was an unskilled manual worker had a car.

Over 86 per cent of households with a house-loan or mortgage had at least one car compared with 67 per cent of other owner occupiers. Just over one in five households in rented local authority dwellings had at least one car in 1991.

The trend in car ownership was steadily upwards between 1986 and 1991. In 1986 only 56.8 per cent of urban households had at least one car compared with 71.8 per cent for rural households. The relevant percentages had risen to 59.5 and 74.6 for urban and rural households, respectively, by 1991.
