## General Details

### Introduction

A Census of Population was taken on the night of Sunday, 23 April 2006, in accordance with the Statistics (Census of Population) Order 2005 (S.I. No. 786 of 2005)<sup>1</sup>. An extract from the census questionnaire is reproduced in Appendix 1.

This seventh volume of the detailed report contains results relating to the population aged 15 years and over classified by principal economic status, ILO economic status, industry and employment status.

Subsequent census volumes will analyse the population by such characteristics as occupation, education, disability, religion, etc.

### Coverage of the Census

The census figures relate to the *de facto* population, i.e. the population recorded for each area represents the total of all persons present within its boundaries on the night of Sunday, 23 April 2006, together with all persons who arrived in that area on the morning of Monday, 24 April 2006, not having been enumerated elsewhere. Persons on board ships in port are included with the population of adjacent areas. The figures, therefore, include visitors present on census night as well as those in residence, while usual residents temporarily absent from the area are excluded from the census count.

A limited number of questions, relating mainly to demographic characteristics, were asked in respect of usual residents who were temporarily absent from their households on census night. The responses to these questions enables a more precise picture to be built up on families and households by excluding visitors present on census night and including residents who were temporarily absent.

### Conduct of the Census

A temporary field force consisting of 6 Census Liaison Officers, 40 Regional Supervisors, 400 Field Supervisors and some 4,400 part-time Enumerators carried out the census enumeration. During the four weeks before Census Day the enumerators entered details in respect of 1.77 million private residences and communal establishments in their enumerator record books. They simultaneously delivered blank census questionnaires to 1.5 million of these dwellings that were expected to be occupied on census night. Approximately 266,000 residences were vacant at the time of the census while in a further 30,000 cases the household was either enumerated elsewhere or temporarily absent from the State. The collection of completed questionnaires took place between Monday 24 April and Monday 22 May 2006.

### Production of Results

Each enumerator first prepared and returned to the CSO a summary of the population in his/her enumeration area. These summaries formed the basis for the preliminary 2006 population results<sup>2</sup>. The completed questionnaires for individual households were subsequently transported to the CSO for processing.

The population summaries, dwelling listings and enumeration maps for individual enumeration areas were checked for consistency and used to determine the boundaries of census towns and suburbs/environs of towns with legal boundaries. The capture and processing of the responses to questions on the census questionnaire proceeded concurrently.

## Labour Force

The results of the Quarterly National Household Survey (QNHS) provide the basis for the official series of quarterly labour force estimates. The labour force and its constituent figures shown in this report are directly based on the census. Users should be aware that information derived from identical questions in the census and QNHS for the same year may show appreciable differences. The main categories affected are the constituents of the question on principal economic status and the employment estimates classified by industry and occupation. The main reasons for the differences are:

- ❑ the census form is completed by a responsible adult in each household throughout the State in respect of everyone present in the household on census night while the QNHS is by face to face interview
- ❑ the census relates to all persons present in the State (including visitors from abroad) at the time of the census while the QNHS covers persons usually resident in Ireland
- ❑ the census is a complete enumeration while the QNHS is a sample survey
- ❑ the QNHS has a much wider range of questions on the labour force which may have a bearing on the responses received to individual questions.

## Industry

As in the 2002 Census, the 2006 Census continues to code industry using NACE – the General Industrial Classification of Economic Activities within the European Communities. NACE Rev. 1 is a 4-digit activity classification that was drawn up in 1990 and is a revision of the version originally published by Eurostat in 1970.

NACE is a hierarchical classification, with 60 2-digit codes, 222 codes at 3-digit level and 503 at 4-digit level. The most detailed level of industry distinguished in the present report is given in Appendix 3 while the intermediate level of industrial groups is given in Appendix 4.

The industry in which a person is engaged is determined (whatever the occupation) by the main economic activity carried out in the local unit in which he or she works. If, however, the local unit provides an ancillary service to another unit in the business (e.g. administration, storage, etc.) then the persons in the ancillary unit are classified to the industry of the unit it services. Thus, while the occupational classification is concerned only with the particular work performed by an individual regardless of the activity carried on at the local unit, the industrial classification is concerned only with the ultimate purpose of the unit or end product regardless of the precise nature of the work performed by each individual.

A manufacturing or commercial unit may employ persons with many different occupations for the purpose of making a particular product or for giving a particular service. Conversely, there are cases in which particular occupations are largely confined to a single industry. For example, the majority of persons with agricultural occupations are in the agriculture industry and most miners are in the mining industry.

The term *industry* used for Census of Population purposes is not confined to manufacturing industry. It is synonymous with the term “sector of economic activity”. The basis of the industrial classification is, in the case of employees, the business or profession of their employer and in the case of self-employed persons, the nature of their own business or profession.
