

## Agricultural Price Indices January 2001

### Sheep price index

Seasonally adjusted

Seasonally adjusted

	Output	Input	Terms of trade
	1990 = 100		
<b>Dec 2000</b>	101.9	114.2	89.2
<b>Jan 2001</b>	102.9	113.5	90.7
<b>% change</b>	1.0%	-0.6%	1.7%

### Sheep prices up 6.1% in January

The seasonally adjusted sheep price index was 115.6 in January 2001, 6.1% higher than in December 2000. *See Table 3 and graph.*

There was an increase of 1.0% in the seasonally adjusted output price index. Cattle, sheep, pigs and potato prices increased, while poultry and milk prices decreased. The seasonally adjusted input price index decreased by 0.6%. Thus the terms of trade increased by 1.7% indicating a favourable price movement for farmers in the month.

Comparing January 2001 unadjusted agricultural price indices with the corresponding January 2000 indices shows that (*see Tables 1 and 2*):

- ◆ Feeding stuffs were up 5.1%, fertilizers were up 11.9% and energy prices were up 10.1%.
- ◆ Cattle, sheep, pigs and potatoes were up 11.8%, 32.1%, 31.9% and 138.5% respectively, while cereals were down 3.2%.

EU output and input price indices for selected items are shown at the back of this release. The latest available figures show that EU cattle prices were down 2.1% in the fourth quarter of 2000.

## Background Notes

- Introduction** This release presents estimates of Agricultural Input and Output Price Indices. The indices monitor trends in prices paid to farmers for their produce and in prices paid by farmers for purchases of goods and services.
- The methodology is harmonised throughout the EU. The estimates are given to Eurostat, the Statistical Office of the European Communities. Preliminary annual indices, based on around nine months data, are also published each November.
- Methodology** The agricultural output price index numbers are intended to measure trends in the price levels of agricultural produce sold by farmers. They have been compiled on the basis of the “national farm” concept. The Laspeyres index formula, involving the use of fixed base year weights, has been used for all commodities except vegetables. Because of the highly seasonal nature of vegetables, variable monthly baskets are used.
- Monthly price series are used except for seasonal products, such as seeds, where prices are only available at certain times during the year. In these cases, the monthly prices returned during the last selling period are continued unchanged until the product can be priced again.
- The monthly sub-indices are weighted by the value of sales off farms and the expenditure on farm inputs to derive overall monthly total input and total output indices. The annual indices are weighted averages of the twelve monthly indices. The weights exclude both the value of inter-farm sales and the value of own produce consumed in farm households.
- Price Coverage** The index prices used are after deduction of levies and exclusion of value added tax. Standardised prices are used for milk, cereals and sugar beet to ensure that products of identical quality are priced in successive periods. In the case of milk, this means pricing at a fixed butterfat content and excluding special bonuses paid in respect of some deliveries to creameries. Standardised cereal prices take account of moisture content with additional allowance made in the case of wheat for specific gravity and protein content. Sugar beet prices are standardised at a fixed sugar content. Allowance is made for subsidies paid to suppliers of agricultural inputs.
- Data sources** The indices are compiled from a wide variety of sources, including direct CSO surveys and administrative data from the Department of Agriculture, Food and Rural Development. The actual sources are described more fully in the June 1995 issue of the Statistical Bulletin.
- Livestock auction mart prices are used for cattle. For sheep and pigs, representative licensed export premises prices are used. Poultry prices at livestock auction marts and approved processing premises are used. For milk, the CSO collects prices from creameries. Feeding stuffs and fertilizers prices are collected through a CSO survey of merchants and co-operatives.
- Seasonal adjustment** As many agricultural products follow a seasonal production pattern, seasonally adjusted monthly series for the total indices and selected sub-indices are also published. The use of standardised prices for some commodities reduces the seasonality of these prices.
- Rebasing** The series are normally rebased every five years. The next rebasing will set 1995 as 100. The value of sales off farms and the expenditure on farm inputs, both averaged over the three years 1994-1996, would normally be used as weights. Methodological discussions at EU level taking place with Eurostat in Luxembourg may result in a significantly different approach being adopted with regard to weighting and pricing.
