Deaths from several Zymotic and other Causes in 1884, in those Registrars' Districts in which the principal Urban Sanitary Districts in Ireland are situated,	132-133
Index to Superintendent Registrars' Districts, and Registrars' Districts,	134-137

REPORT

TO

HIS EXCELLENCY HENRY HOWARD MOLYNEUX, EARL OF CARNARVON,

&c., &c., &c.

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

MAY IT PLEASE YOUR EXCELLENCY,—

I have the honour to submit, for your Excellency's information, the Twenty-first Annual Report on Marriages, Births, and Deaths in Ireland. The tables comprise all the usual details connected with the subject for the year 1884, and the Report has been arranged so as to be strictly comparable with its predecessors.

It gives me much pleasure to report to your Excellency that the work of the department was satisfactorily carried out during the year by the officers under my control.

The usual Weekly and Quarterly Returns were issued with regularity throughout the year. The Search Department of the General Register Office shows a steady increase in the amount of business transacted, thus proving that the records deposited in the department are steadily becoming more appreciated and more availed of by the public.

GENERAL SUMMARY.

The Marriages registered in Ireland during the year 1884 number 22,585; the Births 118,875; and the Deaths 87,154. Both absolutely and in proportion to the estimated population, the births and deaths are under the annual average for the preceding ten years; the marriages, in proportion to the population, show a slight increase, but the number is below the average for the previous ten years.

The recorded natural increase of population, or excess of births over deaths, was 31,721, the loss by emigration amounting to 75,863; there would thus appear to have been a decrease of 44,142 in the population during the year, but against a portion of this decrease there is a set-off in immigration of which no official record has been obtained. The estimated population in the middle of the year was 4,962,693.

[TABLE.

TABLE I.—Showing for each of the years 1874–84, the estimated Population; the number of Marriages, Births, and Deaths registered, and the number of Emigrants enumerated, with the rates per 1,000 of the estimated Population represented thereby; and the averages for the ten years 1874–83.

YEARS.	* Estimated Population in the middle of each year.	Numbers Registered.			Number of Emigrants as returned by the Enumerators.	Rate per 1,000 of Estimated Population.			
		Marriages.	Births.	Deaths.		Marriages.	Births.	Deaths.	Emigrants.

1884,	4,962,693	22,585	118,875	87,154	75,863	4.55	24.0	17.6	15.3

MARRIAGES.

The number of Marriages registered during the year was 22,585, being 1 in every 220, or 4.55 per 1,000, of the estimated population, being .29 over the rate for the previous year, and .10 above the average for the ten years, 1874–83.

Of the 22,585 Marriages registered during the year 1884, 15,873 were between Roman Catholics, 3,617 were celebrated according to the rites and ceremonies of the late Established Church; 2,224 were in Presbyterian Meeting-houses; 362 in “Registered Buildings” belonging to various religious denominations; only 497 by civil contract in the Registrars’ offices; 8 were according to the usages of the Society of Friends; and 4 according to the Jewish rite.

TABLE II.—Marriages registered in Ireland in 1884 and each of the previous ten years, according to the modes of celebration; with the rate per 1,000 of the population represented:—

1883,	3,649	2,283	359	499	9	3	6,752	14,616	21,368	5.74	3.81	4.26
Average 1874–83, . . .	3,823	2,381	341	517	9	2	7,073	16,302	23,375	5.74	4.06	4.45
1884,	3,617	2,224	362	497	8	4	6,712	15,873	22,585	5.77	4.18	4.55

Of the 3,617 Marriages according to the rites of the late Established Church, 76 were by special licence, 3,031 by licence, 414 after the publication of banns, 7 on Registrar's certificate, and in 89 instances there was no information afforded as to which of the foregoing methods was adopted.

During the year 1884 there were issued by the Registrars 711 Licences for Marriage in Registered Buildings and in the Registrars' offices.

The number of Marriage Licences issued by the licensing Ministers of the several Presbyterian bodies is given in the following summary:—

Presbytery or Synod.	Number of Licensing Ministers on 31st December, 1884.	Number of Registered Meeting-houses on 31st December, 1884.	Number of Licences issued
1. General Assembly of the Presbyterian Church in Ireland,	141	558	2,120
2. Remonstrant Synod of Ulster,	8	19	24
3. Presbytery of Antrim,	4	8	17
4. United Presbytery or Synod of Munster,	2	5	2
5. Northern Presbytery of Antrim,	2	2	11
Total,	157	592	2,174

There being no civil restrictions as to the time or place for celebrating marriages between Roman Catholics in Ireland, a registration of the churches and chapels of the Roman Catholic Church is not necessary for the purposes of this office; but with reference to other religious bodies, a record is kept of the places of Divine worship in which marriages may lawfully be solemnized without special licence, and from this it appears that, on the 31st December, 1884, there were 1,506 churches and chapels of the late Established Church, 592 registered Presbyterian Meeting-houses, and 328 "Registered Buildings" belonging to various religious denominations. Compared with the previous year, these numbers show an increase of 3 as regards the late Established Church, a decrease of 1 Presbyterian Meeting-house, and an increase of 5 "Registered Buildings."

The following statement shows the several religious bodies having "Registered Buildings" in 1884:—

Denominations.	No. of Places of Worship.	Denominations.	No. of Places of Worship.
Methodists,	199	United Original Seceders,	1
Reformed Presbyterians,	37	"Protestant Dissenters,"	1
Independents,	25	"Christians,"	1
Baptists,	18	Non-Subscribing Christians,	1
Seceders,	11	"The Catholic Apostolic Church,"	1
United Presbyterians,	11	Christian Brethren,	1
Methodists, New Connexion,	6	Independent Protestants,	1
Moravians, or United Brethren,	6	Jews,	1
Evangelical Union,	2	Salvation Army,	1
Non-Subscribing Unitarians,	2		
Unitarians,	1	Total,	328
Covenanters,	1		

As more than a moiety of the annual number of Roman Catholic marriages in the provinces of Munster and Connaught are celebrated between Christmas and Shrovetide, the marriages registered in Ireland during the first quarter of the year always largely outnumber those in any of the other quarters. In 1884, the numbers recorded were—in the first quarter 8,125; in the second, 4,866; in the third, 4,690; and in the last 4,904.

The marriages of bachelors and spinsters constitute 85·8 per cent. of the total; those of widowers and spinsters 8·6 per cent.; of bachelors and widows 3·0 per cent.; and of widowers and widows 2·6 per cent. Thus, 11 in every 100 of the men married were widowers, and 5·6 per cent. of the women were widows; and in 14 instances in every 100 marriages one or both of the contracting parties had been in the married state before.

TABLE III.—The Number of Roman Catholic and of Other Marriages registered in each Quarter during the four years, 1881-84 :—

QUARTER ENDING THE LAST DAY OF	Years and Number of Marriages Registered.							
	1881.		1882.		1883.		1884.	
	Roman Catholic.	Others.	Roman Catholic.	Others.	Roman Catholic.	Others.	Roman Catholic.	Others.
March,	6,123	1,520	6,138	1,576	5,123	1,629	6,567	1,558
June,	3,021	1,560	3,184	1,724	3,392	1,561	3,241	1,625
September,	2,986	1,798	2,926	1,782	2,967	1,727	3,012	1,878
December,	2,901	1,958	2,983	1,766	3,134	1,835	3,053	1,851
Total,	14,981	6,845	15,181	6,848	14,616	6,752	15,873	6,712
General Total,	21,826		22,029		21,368		22,585	

A complete registry of the exact ages of the persons married would be valuable from many points of view; hence it is matter for regret that in the great majority of instances the ages are not recorded. The requirements of the law are technically complied with by the entry in the age column of "minor" or of "full age," as the case may be, and there seems to be a general and increasing inclination to take advantage of this circumstance, as in 1884 the ages of both parties were specified in only 5,857 instances, being about one-fourth of the total number of marriages. In the year 1865, when 30,802 marriages were registered, the ages of both parties were given in 13,910 instances.

Of 22,585 men married during the year, 548, or 2·43 per cent., were minors; and of the women married, 2,471, or 10·94 per cent., were under age. These proportions differ but slightly from the averages for the preceding ten years.

The highest proportion of husbands (2·94 per cent.) married under age in 1884, was in the province of Ulster, where also there was the highest per centage of wives (12·27), not of full age.

It may be added that the per-centage of persons married in Ireland who were under age is very far below the corresponding rates in England and Scotland.

The signatures of the contracting parties in the marriage registers or certificates afford a rough test of the progress of elementary education. In the year 1884, 17,012, or 75·3 per cent., of the husbands, and 16,249, or 71·9 per cent., of the wives wrote their names, and the remainder signed by marks.

These figures, though still leaving much to be desired, contrast hopefully with the corresponding results eleven years since, the per-centage of persons married in 1874 who wrote their names being—men 69·9, and women 63·6.

As usual, the most favourable results appear in Leinster, and the least satisfactory in Connaught, the number of those married who wrote their names varying from 79 in every 100 men and 79 in every 100 women, in the former province, to 65 per cent. of the men and 63 per cent. of the women in the latter.

In 3,523 instances, both of the parties married signed the register by "mark," and in 4,863 cases the register was thus signed by either the husband or the wife, so that in 8,386 instances, or 37·1 per cent. of the total number of marriages, one or both of the parties signed by mark; and in 14,199 instances, or 62·9 per cent., both parties wrote their names.

The number of marriages registered in each of the eleven years 1874-84; the proportion per cent. of persons married who wrote their names in the registers, of minors, of widowers, and of widows are given in the following Table for Ireland, and for each of the four registration provinces.

TABLE IV.—The Number of Marriages in Ireland and in each of the Four Registration Provinces during the years 1874–84, with the proportion per cent. of Persons who signed their Names, of Persons not of Full Age, and of Re-marriages.

Registration Provinces.	Number of Marriages.	Signed their Names in Writing.		Persons not of Full Age.		Re-marriages.

In proportion to the estimated population at all ages, the registered marriages were most numerous in the province of Leinster, in which, however, the rate was only 4.9 per 1,000 persons; Ulster comes next, with 4.6 per 1,000; Munster third, with 4.2 per 1,000; and Connaught last, the rate being 3.3 per 1,000.

The highest rate in any county was 6.9 per 1,000, which was the marriage rate for Dublin; and the lowest 3.1 per 1,000, for Cavan and Mayo. Between these, the most favourable were 6.2 for Antrim, 5.0 in Wicklow, and 4.9 in Waterford; and the least so 3.2 in Galway and 3.3 in Sligo, Monaghan, and King's County.

BIRTHS.

The number of births registered during the year 1884 was 118,875—61,152 boys and 57,723 girls, or 105·9 of the former to every 100 of the latter—the rate afforded in proportion to the estimated population being 1 in 41·7, or 24·0 per thousand, which is considerably under the low average rate (25·3 per 1,000) for the ten years, 1874–83, and less than the rate in any of those years, except 1883, when the rate fell to 23·6 per 1,000.

In the report for the year 1875, the causes of the comparatively low birth-rate in Ireland were considered, and the observations then made are almost equally applicable to the year now under review:—

“It has been seen that the marriages registered in Ireland, when compared with the total population fall far short of the proportion in England. The births, too, present a contrast—not, indeed, so striking but still sufficiently so to call for explanation; the average rate in England being 35·4 per 1,000 persons, against 26·9 per 1,000 in Ireland.

“A large portion of the disparity between the marriage rates has been accounted for, and shown to be owing to the special circumstances of Ireland, and it is obvious, that, speaking in general terms, there must be a corresponding difference between the birth-rates.

“Pursuing the inquiry with special reference to births, and omitting, for the present, those of children born out of wedlock, it is found that the average rate of legitimate births in England for the ten years 1865–74 was 33·4 per 1,000 of the population, and that the corresponding rate in Ireland was only 26·1 per 1,000.

“The conclusion at first naturally suggested by these figures is that the registration of births in Ireland must be very defective; but, on examination, this proves to be, in great part, erroneous.

“In 1871, according to the Census, the married women in England between the ages of 15 and 55, which may be taken as the limits of the child-bearing period, formed 14·7 per cent. of the total population at all ages, and in Ireland the corresponding proportion was only 11·8 per cent., or, in other words, there were five married women, possible mothers, in England to 4 in an equal number of the population in Ireland. Taking the ages 15 to 45 years, the difference is even greater.

“Assuming the actual births to be in the same ratio to the number of married women in each of the two countries, it is evident that the births in any given number of the total population in Ireland must be less than the corresponding rate in England to the extent that the proportion of married women in the former country falls short of that for the latter.

This being so, the respective rates for legitimate births, given above, namely, 26·1 per 1,000 persons in Ireland, and 33·4 per 1,000 in England, are reconcilable, as they bear the same ratio to each other as the relative proportion of married women in the population; and, looking at the numbers from another point, it is found that the births in England are annually equal to 224 to every 1,000 married women of the child-bearing ages, and that the registered births in Ireland equal 223 per 1,000.

“There is a popular opinion that the mothers of Ireland are more fruitful than those of England; but this, if true in the abstract, must, under present conditions, be to a certain extent neutralized by the comparatively late period of life at which many marriages in Ireland now take place.”

Of the 118,875 children whose births were registered in Ireland during the year 1884, 115,676, or 97·3 per cent. were legitimate, and 3,199, or 2·7 per cent., were illegitimate. The average per-centage of illegitimate births in the preceding 10 years was 2·4.

It is unnecessary to say that these results compare very favourably with the returns for most other countries.

Of the children born in wedlock during the year, 59,559 were males, and 56,117 females, being 106·1 of the former to every 100 of the latter, and of the illegitimate children 1,593 were males, and 1,606 females, or 99·2 boys to 100 girls.

Comparing the provinces, we find that the per-centage of children born in Ulster, who were illegitimate, was 4·1; in Leinster, 2·4; in Munster, 2·2; and in Connaught, 0·8.

TABLE V.—The Per-centage of Legitimate and of Illegitimate Births registered in Ireland during the years 1880–84, by Registration Provinces.

Registration Provinces.	Proportion per cent. of Legitimate Births.					Proportion per cent. of Illegitimate Births.				
	1880.	1881.	1882.	1883.	1884.	1880.	1881.	1882.	1883.	1884.
IRELAND, . . .	97·5	97·5	97·3	97·4	97·3	2·5	2·5	2·7	2·6	2·7
LEINSTER, . . .	97·8	97·8	97·8	97·9	97·6	2·2	2·2	2·2	2·1	2·4
MUNSTER, . . .	98·2	98·2	98·0	97·9	97·8	1·8	1·8	2·0	2·1	2·2
ULSTER,	96·0	95·9	95·7	95·9	95·9	4·0	4·1	4·3	4·1	4·1
CONNAUGHT, . . .	99·0	99·2	99·1	99·3	99·2	1·0	0·8	0·9	0·7	0·8

The respective total birth-rates for the provinces in 1884 were—Leinster, 23·6 per 1,000 of the population; Munster, 22·6; Ulster, 23·2; and Connaught, 22·1.

The four counties having the highest rates are Antrim, 29·0 per 1,000 inhabitants; Dublin, 28·1; Kerry, 24·6; and Mayo, 23·9. Those with the lowest rates are—Monaghan, 18·9; Longford, 19·1; Tyrone, 19·2; and Fermanagh, 19·4.

Of the total births, 51·7 per cent. were registered in the first six months of the year (182 days), and 48·3 per cent. in the second half of the year (184 days).

The number registered in the first quarter was 29,910; in the second, 31,504; in the third, 29,176; and in the fourth, 28,285.

TABLE VI.—Showing, by Quarterly Periods, the number of Births registered in Ireland in each of the five years 1879–83, and the average number for that period; also the number registered during each quarter of the year 1884:—

DEATHS.

The deaths registered during the year amount to 87,154, being equal to 1 in 56·9 or 17·6 per 1,000 of the estimated population. The deaths of males number 43,389, and those of females 43,765, the former being equal to 17·9 in every 1,000 males living, and the latter representing 17·3 per 1,000 females.

The death-rate (17·6) is somewhat under the average rate (18·3) for the preceding ten years.

As heretofore, very many of the Registrars furnished at the close of each quarter valuable notes on the sanitary condition of their respective districts. These notes were embodied in the Quarterly Returns issued from this department, and emanating as they did, from gentlemen qualified to speak decisively on the subject, it is to be hoped that they received the serious attention of the various Local Authorities intrusted with the administration of the Public Health Acts.

With respect to the death-rates for the four provinces, the rate for Connaught is only 13·1; that for Ulster is 16·3; for Munster, 16·9, and for Leinster, 20·0.

Of the thirty-two counties, the four having the lowest registered mortality are—Roscommon, 12·5 per 1,000; Leitrim, 12·6; Sligo, 12·7; and Donegal, 13·3.

Those in which the rate was highest are—Dublin, 25·9; Waterford, 21·3; and Wexford and Antrim, each 19·2.

The deaths registered in the first half of the year always outnumber those in the second. In 1884, 54·8 per cent. of the total deaths were registered in the six months, January to June inclusive, and only 45·2 per cent. in the remaining six months of the year.

The annual rates represented by the deaths registered in each quarter are as follow:— First quarter, 19·4 per 1,000 of the population; second, 19·2; third, 14·7; and fourth, 17·0.

From Table on pp. 120–131, it will be seen that, of the 87,154 deaths registered during the year, 2,156 took place in Infirmaries and General Hospitals; 866 in Public Lunatic Asylums; 10,946 in Workhouses and Workhouse Hospitals; and 73,186, were of persons who died “At their Own Homes, &c.” As in the Report for the preceding year an additional Table (see pages 132–33) is given showing like information for those Registrars’ Districts in which the principal Urban Sanitary Districts in Ireland are situated.

TABLE VII.—Showing, by Quarterly Periods, the number of Deaths registered in Ireland in each of the five years, 1879–83, and the average number for that period; also the number registered during each quarter of the year 1884:—

CAUSES OF DEATH.*

I.—SPECIFIC FEBRILE OR ZYMOTIC DISEASES.

The deaths from Specific Febrile or Zymotic diseases registered during the year 1884, amounted to 8,498, or 171 in every 100,000 of the estimated population, being 1,130, or 21 per 100,000 persons under the deaths from these causes in the preceding year, and much below the average for the ten years, 1874–83.

Of the 8,498 deaths from zymotic diseases 5,120, or 60·2 per cent., were amongst children under 10 years of age.

The deaths from the eight principal zymotic diseases† registered during 1884 form 8·8 per cent. of the deaths from all causes, and are equal to 154 in every 100,000 persons living; the average annual mortality from the same diseases in the preceding 10 years represents 10·7 per cent. of the average number of deaths from all causes, and is equal to 196 deaths in every 100,000 of the estimated mean population.

* In the year 1881, some modifications were introduced into the classification of the causes of death, so as to bring it into accord with alterations in Nosology necessitated by the advance of Medical Science. These modifications are given in detail in the Eighteenth Report of the Registrar-General for Ireland, Page 6, et seq., 1881.

† Small-pox, Measles, Scarlet Fever, Diphtheria, Whooping-cough, Fever, Diarrhoea (and Dysentery), and Cholera.

TABLE VIII.—Showing, by PROVINCES, the Number of Deaths from the principal Febrile or Zymotic Diseases registered in Ireland during the Ten Years 1874–83; the Average Annual Number for that period; with the Number registered in 1884, and the Rate represented thereby.

Small-pox.—The average annual number of deaths from small-pox for the ten years, 1874–83, was 335. In 1882 there were 129 deaths registered; in 1883 the number fell to 16, and during last year there was only 1 fatal case of the disease recorded; it occurred in Skreen district, in the union of Dromore, West.

Measles.—Deaths from measles, which had risen from 402 in 1881 to 1,518 in 1882, fell to 801 in 1883, and further declined to 559 last year. Of these 559 deaths, 26 occurred in Leinster (21 of which were in the Dublin Registration District); 171 in Munster (including 84 in Cork union); 97 in Ulster (including 22 in Dunfanaghy union and 15 in the union of Magherafelt); and 265, or nearly one-half of the total, in Connaught; 159 fatal cases of the disease having occurred in the county of Mayo (including 53 in Swineford union, 29 in Castlebar union, 28 in Ballinrobe union, and 22 in Claremorris union); 56 in the county of Galway (including 25 in Galway union and 19 in Tuam union); and 32 (22 of which were in Castlereagh union) in the county of Roscommon. The deaths from this cause in Ireland during last year are equal to 11·3 per 100,000 of the population. In Connaught the rate was 32·4 per 100,000.

Scarlet Fever.—The number of deaths from this disease is 1,377, being a decrease of 388 as compared with the preceding year, and 689 under the average for the ten years 1874–83.

The deaths from scarlet fever in 1884 were distributed through the four provinces as follows:—Leinster, 487 (including 357 in the two Dublin unions, 36 in Rathdown union, and 25 in Tullamore union); Munster, 415 (of which number 113 occurred in Cork county—including 24 in Castletown union and 45 in Cork union); 87 in the county of Kerry (including 54 in Killarney union); 106 in Limerick county (including 28 in Kilmallock union and 57 in Newcastle union); and 76 (including 74 in Waterford union) in the county of Waterford; Ulster, 438 (182 of which occurred in Belfast union, 65 in Londonderry union, 30 in Lisburn union, 21 in Gortin union, and 20 in Newtownards union); and Connaught, 37.

In Leinster, deaths from scarlet fever were equal to 38·8 per 100,000 of the population; in Munster, the rate was 30·9 per 100,000; in Ulster, 24·9; and in Connaught only 4·5.

Diphtheria.—This disease proved fatal in 354 instances, being equal to the average annual number for the ten years 1874–83, and 115 in excess of the number for the year 1884. In proportion to population the highest mortality (8·9 per 100,000 persons) was in the province of Leinster.

Whooping-cough.—The deaths (1,834) from whooping-cough are 97 over the average for the ten years 1874–83, but 207 under the number registered in the year 1883; they afford an annual rate of 37·0 per 100,000 of the estimated population. In proportion to population the mortality was highest in Munster and lowest in Ulster, the rates for these provinces being 40·6 and 29·7 per 100,000 persons respectively.

Fever.—The number of deaths from the several forms of continued fever was 1,893 (971 males and 922 females), being the lowest number registered in any year since registration was established in 1864; the average annual number for the ten years 1874–83, was 2,741; the number in 1883 was 2,256. The deaths recorded during last year are equal to a rate of 38·1 per 100,000 of the estimated population; the respective rates for the provinces being—Leinster, 44·6 per 100,000; Munster, 39·9; Ulster, 29·3; and Connaught, 34·4.

Of the registered deaths from fever, 628 were ascribed to typhus, 693 to typhoid or enteric, and 572 to simple continued fever, or vaguely as to “fever.” The age periods, 45 and under 55 years, and 25 to 35, were those in which fever proved most fatal in proportion to the living at the same ages; the former yielding a rate of 47·07 per 100,000, and the latter 44·92. The lowest rate was 25·71 for the period “under 5 years old.”

TABLE IX.—Showing for the year 1884 the Deaths from the several forms of Fever at each Age-Period, with the proportion to the number of the living at each Age represented thereby.

AGE-PERIODS.	DEATHS FROM FEVER.												No. of Deaths to 100,000 of the Living at same age.

Erysipelas.—The deaths from erysipelas number 245 only, being 53 under the annual average for the preceding decade, and 19 under the number in the year 1883. The highest mortality in 1884, in proportion to the population, was in Leinster, and the lowest in Connaught.

Puerperal Fever.—The number of deaths from this disease registered in 1884 was 300, being 63 below the average for the ten years, 1874–83, and 7 under the number in the year 1883.

Influenza.—Forty-three deaths were ascribed to this disease; the number in 1883 was 87, and the annual average for the ten years, 1874–83, was 82.

Diarrhoea and Dysentery.—For the last four years the deaths from diarrhoea and dysentery have been considerably below the average, the respective numbers being, for 1881, 1,526; for the following year, 1,564; for 1883, 1,522; and for last year, 1,566; the number for last year, which is equal to 31·6 per 100,000 of the population, is 323 under the average annual number for the ten years, 1874–83.

The rates for the provinces in 1884 were as follow:—Leinster, 42·0 per 100,000 persons; Munster, 29·6; Ulster, 29·5; and Connaught 14·9.

Simple Cholera.—Forty-six deaths were ascribed to this disease.

Five males and 3 females died from *Hydrophobia*.

II.—PARASITIC DISEASES.

There were 131 deaths caused by diseases of this class.

III.—DIETETIC DISEASES.

The deaths in this class number 172; they comprise 165 from intemperance, 63 of which (54 males and 9 females) were caused by delirium tremens, and 102 (79 males and 23 females) come under the head of chronic alcoholism.

IV.—CONSTITUTIONAL DISEASES.

From diseases termed “constitutional” there resulted 16,369 deaths (7,653 males and 8,716 females), affording a rate of 1 in 5·3 of all the deaths, and equal to 330 in every 100,000 of the population.

Phthisis or Pulmonary Consumption proved fatal in 10,583 instances (4,876 males and 5,707 females) being equal to 213·3 in every 100,000 persons; the average annual number for the previous ten years was 10,339.

As heretofore, Leinster and Ulster yield the highest rates, and Connaught the lowest. The rates for the four provinces are as follow:—Leinster, 245 per 100,000 of the population; Ulster, 230; Munster, 175; and Connaught, 135.

Of the total deaths from phthisis, 7,730, or 73 per cent., were of persons between 15 and 45 years of age.

TABLE X.—Showing, by PROVINCES, the Number of Deaths from Phthisis or Pulmonary Consumption registered in Ireland during the Ten Years 1874–83; the Average Annual Number for that period; with the number registered in 1884, and the Rate represented thereby.

Mesenteric Disease.—The deaths from mesenteric disease number 1,064—513 males and 551 females.

Gout.—Only 42 deaths from gout were registered (30 males and 12 females).

Cancer, Malignant Disease.—There were 1,947 deaths tabulated under this heading, of which 836 were those of males and 1,111 of females.

V.—DEVELOPMENTAL DISEASES.

The deaths in this class amount to 17,933, of which 17,549 (8,061 males and 9,488 females) were ascribed to “old age.” Of the remaining 384 deaths, 282 are tabulated under the head of “premature birth;” 14 were caused by cyanosis, 38 by spina bifida, &c.

VI.—LOCAL DISEASES.

The number of deaths from “local diseases” registered amounted to 34,588 (18,322 males and 16,266 females), or 1 in 2·5 of the deaths from all causes.

Diseases of the Nervous System.—From this group of diseases there resulted 8,211 deaths—4,490 males and 3,721 females. They include 2,977 from convulsions; (nearly all children), 1,476 from paralysis, 1,054 from apoplexy, 771 from inflammation of the brain, 328 from epilepsy, 327 from insanity (general paralysis of the insane), 7 (2 males and 5 females) from chorea or St. Vitus’s dance, 271 from softening of the brain, &c.

Diseases of the Circulatory System.—Diseases of the circulatory system caused 4,896 deaths—2,461, males and 2,435 females.

*Diseases of the Respiratory System.**—The deaths from these diseases, omitting those from croup, which disease was not included in this group prior to the year 1881, amounted to 13,084 (6,914 males and 6,170 females), being equal to 263·6 in every 100,000 of the population. The average number for the preceding ten years was 15,011, the annual numbers varying from 11,419 in 1874 to 18,441 in 1879. The respective rates for the Provinces, in 1884, are Leinster, 304·3 per 100,000 persons; Munster, 283·8; Ulster, 237·3; and Connaught, 156·2.

As many as 9,175 of the deaths from these causes (4,523 males and 4,652 females) resulted from bronchitis; 2,403 (1,530 males and 873 females) were from pneumonia or inflammation of the lungs; 332 from asthma and emphysema; 240 from pleurisy; 104 from laryngitis, &c.

TABLE XI.—Showing, by PROVINCES, the Number of Deaths from Diseases of the Respiratory System* registered in Ireland during the Ten Years 1874–83; the Average Annual Number for that period; with the number registered in 1884, and the Rate represented thereby.

Rate per 100,000 Inhabitants, 1884,	304·3	283·8	237·3	156·2	263·6	

Diseases of the Digestive System.—These diseases contributed 4,685 deaths (2,477 males and 2,208 females). They include 444 from enteritis or inflammation of the bowels; 358 from peritonitis or inflammation of the covering of the bowels; 452 from ileus or obstruction of the bowels; 265 from ulceration of the intestines; 127 from hernia; 13 (9 males and 4 females) from fistula; 215—138 males and 77 females—from cirrhosis of liver, &c.

Diseases of the Urinary System.—To the various affections of this order of diseases

* Exclusive of Phthisis, or Pulmonary Consumption, for which see “Constitutional Diseases,” and of Croup, which, previous to the year 1881, was not included in this group of diseases.

1,480 deaths (1,100 males and 380 females) were ascribed. Of these deaths, 493 (311 males and 182 females) were from Bright's disease, 122 from nephritis or inflammation of the kidneys; 16 from ischuria or suppression of urine; 11 from stone in the bladder; 57 from uræmia, &c.

The remaining deaths from Local Diseases comprise 30 from *Diseases of the Lymphatic System and of Ductless Glands*; 703 from *Diseases of the Reproductive System* (including 190 from diseases of the Organs of Generation, and 513 from the Accidents of Childbirth); 249 from *Diseases of the Locomotive System*; and 242 from *Diseases of the Integumentary System*.

VII.—VIOLENT DEATHS.

The number of violent deaths registered during the year was 1,899 (1,367 males and 532 females), or 38·3 in every 100,000 of the population, being slightly under the average for the ten years 1874–83. Accidents or negligence caused 1,690 of these deaths (including 686 from fractures and contusions, 347 from burns or scalds, and 412 from drowning); there were 108 cases of homicide (murder and manslaughter), and 99 of suicide; 2 men were executed: both in Leinster.

TABLE XII.—Showing, by PROVINCES, the Number of Deaths in Ireland caused by Violence (including Accidental, Homicidal, and Suicidal Deaths), registered during the Ten Years 1874–83; the Average Annual Number for that period, with the number registered in 1884, and the Rate represented thereby.

Inquests.—There were 2,135 inquests reported to the Registrars during the year 1884, being 1 inquest to every 41 deaths registered.

AGES.

Deaths of infants under 1 year old numbered 10,885, being equal to 9·2 per cent. of the number of births registered.

Amongst children under 5 years of age 18,736 deaths occurred—a mortality equal to 33·9 in every 1,000 of the living at that age. Of these, 9,950 were boys and 8,786 girls; the former number representing 35·5 in every 1,000 boys, and the latter 32·3 in every 1,000 girls under 5 years old.

The deaths of persons aged 65 years and upwards are equivalent to 9·2 per cent. of the living at that age.

Amongst the deaths registered are 604 of persons stated to have been aged 95 years and upwards—273 males and 331 females.

EMIGRATION.

According to the Returns obtained by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several Irish seaports, the number of emigrants who left Ireland during the year 1884 amounted to 75,863; of these 38,054 were males and 37,809 were females. Of the whole number, 14,063 were from Leinster; 24,363 from Munster; 21,704 from Ulster; and 15,733 from Connaught.

Of the total emigrants from Ireland in 1884, 16·9 per cent. were under 15 years of age; 70·5 per cent. were between 15 and 35 years old; and 12·6 per cent. were 35 or upwards.

PRICES OF PROVISIONS, AND PAUPERISM.

The average prices, in Dublin, of potatoes, and beef in 1884 were under those for the preceding year; in oatmeal there was a slight advance; the average price of Messrs. Manders and Co.'s 4-lb. loaf was 6½d., being ¾d. under the average price for 1883. Oatmeal averaged 17s. 6d. per cwt., being 4d. over the mean price for 1883; the average prices of potatoes ranged from 2s. 8d. to 3s. 6d. per cwt., against 3s. 9d. to 4s. 10d. in 1883; and those of beef from 62s. 6d. to 72s. per cwt., against 66s. 6d. to 77s.

TABLE XIII.—AVERAGE PRICES in DUBLIN of BREAD, OATMEAL, POTATOES, and BEEF, during the years 1874–84, and the AVERAGE NUMBER of PERSONS in IRELAND receiving IN-DOOR and OUT-DOOR RELIEF on Saturdays in those years; also the AVERAGE PRICES of PROVISIONS and the AVERAGE NUMBER of PERSONS in RECEIPT of RELIEF during each quarter of the year 1884.

* Compiled from Returns furnished by the Local Government Board.

Surveying the period covered by the several Tables in this Report, *i.e.*, 1884, and the ten years preceding, it is found that beef was lowest in the year 1879, when the average prices ranged from 57s. to 68s. per cwt.; bread in 1884, in which year the average price of Messrs. Manders' 4-lb. loaf was 6½d.; oatmeal in 1881, when the average price was 14s. 1d. per cwt.; and potatoes in 1881, when the average range of prices was from 2s. 5d. to 3s. 8d. per cwt., and 1884 when the range was from 2s. 8d. to 3s. 6d. The highest average price of bread was 8d. in the years 1874–7; of oatmeal, 18s. 8d. in 1874; the highest range for potatoes, 4s. 9d. to 7s. 6d. per cwt. in 1878, and for beef, 66s. 6d. to 77s. per cwt. in 1883.

From Returns, for which I am indebted to the Local Government Board, it appears that the average number of workhouse inmates in Ireland on Saturdays during the year 1884 was 48,241, being 2,144 under the average for the preceding year; and that the average number of persons receiving out-door relief was 57,969, or 2,752 under the corresponding number for 1883.

THE WEATHER.

The following particulars have been extracted from Returns of Meteorological Observations taken during the years 1865-84, at 40, Fitzwilliam-square, West, Dublin, by J. W. MOORE, M.D., Univ. Dubl., F.R.Q.C.P., F.M.S., Observer at Dublin for the Meteorological Office, London:—

The mean Atmospheric Pressure has been obtained from daily readings of the barometer at 9 A.M. and 9 P.M., corrected and reduced to 32° Fahrenheit at the mean sea level. The Mean Temperature values have been deduced from the maximal and minimal readings of the thermometer in the shade by Kaemtz's Formula, viz., $\text{min.} + \{\text{max.} - \text{min.} \times .41\} = \text{Mean Temperature}$. The Rainfall is that measured daily at 9 A.M. A rainy day is one on which at least one-hundredth (.01) of an inch of rain falls within the twenty-four hours from 9 A.M. to 9 A.M.

The Mean Height of the Barometer during the year 1884 was 29.942 inches. The highest observed reading was 30.729 inches, at 9 A.M., on October 5th. The lowest observed reading was 28.150 inches, at 2.15 P.M., on January 26th. The extreme range of atmospherical pressure was 2.579 inches compared with 2.229 inches in 1883.

The Mean Temperature of the year, deduced from the maximal and minimal readings of the thermometer in the shade by Kaemtz's formula, was 49.6°. The highest reading was 75.4° on June 13th; the lowest reading was 27.3° on December 22nd. The average mean temperature for the years 1865-84 calculated in the same way, was 48.9°. The mean temperature, deduced from the daily readings of the dry bulb thermometer at 9 A.M. and 9 P.M., was 50.2°.

Rain fell on 187 days, including snow or sleet on 12 days, and hail on 20 days. The average number of rainy days in the years 1865-84 was 194.6. The total rainfall measured 20.467 inches, compared with an average of 28.015 inches in the twenty years 1865-84. During the first half of 1884 (January to June, inclusive) the rainfall was 11.872 inches on 92 days. In the same period in 1883 the rainfall was 13.649 inches on 90 days. During the second half of 1884 (July to December inclusive) only 8.595 inches fell on 95 days.

As regards the Direction of the Wind 732 observations were made during the year, with this result—N., 30; N.E., 27; E. 58; S.E., 79; S., 98; S.W., 128; W., 200; N.W., 74; Calms 38.

A general review of the year 1884 shows that the annual mean temperature was seven-tenths of a degree above the average, the rainfall was smaller than in any one of the preceding nineteen years, 1865-83 inclusive, and was much below the average of the same nineteen years, viz., 28.412 inches. In 1870 only 20.859 inches fell, and that was really a drier year than 1884, for in it there were but 145 rainy days, or days upon which not less than .01 inch of rain (one-hundredth of an inch) was measured. In 1884 there were as many as 187 rainy days, compared with an average number of 195 in the nineteen years, 1865-83 inclusive. Contrary to what usually occurs, more than half the rainfall fell within the first six months—11.872 inches having been registered up to June 30 on 92 days. In fact, the most striking feature in the distribution of the rainfall was the scanty downpour observed in August (.777 inch) and October (.834 inch), usually two of the wettest months in the year, the averages being 2.987 inches and 3.140 inches respectively. On no one day did one inch of rain fall; the heaviest daily rainfalls were .863 inch on April 4, and .700 inch on February 20. It will be observed, on reference to the Abstract Table on page 24, that on April 4 more rain fell than during the whole month of October, and that on February 20 the downpour nearly equalled the rainfall of August.

The amount of cloud was as nearly as possible equal to the average, namely, 60.8 per cent.

Appended are some more detailed remarks upon the different months of the year 1884.

JANUARY.—A singularly open, frostless month, with scarcely any easterly wind, but a great excess of cloud. A protracted mild and quiet dull period was succeeded on the 22nd by a series of strong westerly gales and frequent heavy rainfalls, the atmospherical disturbances culminating on the 26th in a storm of exceptional violence, during which the barometer fell to 28.150 inches in Dublin, but to 27.400 inches at Aberdeen and to 27.332 inches at Ochertyre, near Crieff in Perthshire, readings believed to be lower than any recorded for at least 120 years.

The mean Dry-bulb temperature, from observations at 9 A.M. and 9 P.M., was 45.2°. The mean temperature, calculated by Kaemtz's formula, was 44.5°, or slightly less than 4° in excess of the average for January in the twenty years, 1865-84, inclusive (40.8°). The arithmetical mean of the maximal and minimal readings was 45.2°. The rainfall (2.358 inches) and rainy days (18) were both rather above the average for the same period, namely, 2.243 inches and 17.1 rainy days. Hail occurred on the 1st and 30th, snow or sleet on the 25th, 26th, and 27th. Lightning was seen on the nights of the 20th and 25th. A lunar halo appeared on the 10th, and "blurred" solar halos on the 29th and 30th. A dense vapour fog prevailed on the morning of the 3rd, but with this exception there was a complete absence of fogs. The bright sunsets so characteristic of the present season were again seen on several occasions. Pons' comet was well seen to S.W. after dark in the middle of the month.

It is noteworthy that the mean temperature of January, was about 2° in excess of that of the previous November, and nearly 3° in excess of that of the previous December.

FEBRUARY.—In Dublin the frostless character of the winter was maintained throughout this month, but there was a decrease in temperature, owing to the increasing prevalence of south-easterly winds. The amount of cloud was unusually large, namely 76 per cent., and the weather was often cheerless and wet. A very violent southerly gale occurred on the night of the 20th, when also the heaviest rainfall of the month took place.

The mean Dry-bulb temperature was $43^{\circ}0'$. That deduced from the maximal and minimal readings ($43^{\circ}4'$) was half a degree above the average for February, in the twenty years, 1865–84, inclusive, but it was $1^{\circ}1'$ below that of January, 1884. The arithmetical mean of the highest and lowest readings was $43^{\circ}4'$. The rainfall (3.518 inches) was considerably above the average of the twenty years in question, viz., 2.244 inches, and the rainy days (20) were to a less extent in excess—the twenty years' average being 17.6 days. Snow or sleet fell on the 2nd, 10th, and 11th; hail on the 10th. Lightning was seen on the 21st. Solar halos appeared on the 20th and 25th; lunar halos on the 2nd, 6th, and 11th. There were strong winds on several days. On the 26th only was the atmosphere foggy.

MARCH.—The weather was generally favourable, and an exceptionally dry period lasted from the 13th to the 31st, the rainfall not amounting to one-tenth of an inch. Unusual warmth for the time of year prevailed between the 14th and the 19th—on the 16th the thermometer rose to 61° in Dublin and to 70° at Cambridge. The mean Dry-bulb temperature of the whole month was $44^{\circ}8'$. That deduced from the maximal and minimal readings by Kaemtz's formula was $44^{\circ}5'$, or $1^{\circ}8'$ in excess of the average of March in the twenty years, 1865–84, inclusive. The arithmetical mean of these readings was $45^{\circ}4'$. The rainfall (1.858 inches) fell short of the average of the same twenty years (2.081 inches), but the rainy days (17) were almost exactly the average (16.5). Sleet or snow occurred on the 10th and 31st, hail on the 20th and 31st.

The atmosphere over Dublin was foggy on the 4th and 24th. Solar halos were seen on the 9th and 15th; lunar halos on the 5th and 12th. The wind blew freshly or strongly on 12 days.

APRIL.—A cold, dry month—the wind, blowing almost constantly from easterly points of the compass, was of a particularly dry and searching character. In Western Europe this is peculiar to the polar or "Continental" winds of late winter and spring, which have traversed a vast land surface, covered with large quantities of melting snow and ice, and which have an exceptional capacity for absorbing aqueous vapour, owing to a quickly increasing temperature. Although cold, this month was warmer than April, 1879 (M. T. = $43^{\circ}7'$), and 1881 (M. T. = $44^{\circ}7'$). The mean temperature deduced from the readings of the maximal and minimal thermometers was $45^{\circ}3'$, or $1^{\circ}7'$ below that of the twenty years 1865–84, inclusive, and $1^{\circ}2'$ below the mean value of the readings of the Dry-bulb thermometer recorded daily at 9 A.M. and 9 P.M. The arithmetical mean of the highest and lowest temperatures was $46^{\circ}4'$, while the mean Dry-bulb temperature was $46^{\circ}5'$. The rainfall (1.532 inches) and rainy days (11) were decidedly below the average of the twenty years in question—viz., 2.029 inches, and 15.0 days respectively. It is to be noted in this connexion that a heavy fall of .863 inch of rain on the 4th yielded more than half the measurement of the month, and also that on 5 out of the 11 "rainy days" the quantity of rain measured was a minimum—namely, .010 inch. Sleet and snow fell on the morning of the 1st; hail in the afternoon of that day, and also on the 18th. Lightning was seen on the night of the 4th. Early on the 9th there was a thick vapour fog, and on the 8th, 11th, and 24th likewise the atmosphere was at times foggy. "East wind haze" was observed in a marked degree on many days, and about the middle of the month the coloration round the sun so often present during the past winter was distinctly seen.

MAY.—In most respects this may be considered to have been a favourable month. The mean temperature deduced from the readings of the Dry-bulb thermometer taken at 9 A.M. and 9 P.M. was $52^{\circ}5'$, while that deduced, by Kaemtz's formula, from the maximal and minimal readings was $51^{\circ}3'$ —a value which is slightly more than half a degree ($0^{\circ}6'$) above the average mean temperature calculated in the same way for the twenty years 1865–84, inclusive. The excess of the mean of the Dry-bulb readings was partly caused by the prevalence of very low temperatures at night. The arithmetical mean of the maxima and minima was $52^{\circ}6'$. The rainfall (1.358 inches) fell short of the average of twenty years (1.938 inches) by nearly six-tenths of an inch. The rainy days (16 in number) were nearly one more than the average—namely, 15.1. There was no snow or sleet, but hail fell on the 3rd and three following days, as well as on the 18th and 19th. Distant thunder was heard on the 4th and 19th, and lightning was seen on the night of the 24th. Solar halos appeared on the 12th, 21st, and 23rd. There was a beautiful rainbow after 5 P.M. on the 19th. The sky was much freer from cloud at 9 P.M. (per-centage of sky obscured = 43.2) than at 9 A.M. (per-centage = 67.3).

JUNE.—At first cold and showery, with prevalent N.W. winds, this month ultimately proved to be very fine, dry, and warm. The mean temperature deduced from the readings of the Dry-bulb thermometer taken at 9 A.M. and 9 P.M. was $57^{\circ}8'$, while that calculated by Kaemtz's formula from the daily readings of the maximal and minimal thermometers was $56^{\circ}6'$ —that is, exactly the average mean temperature, calculated in the same way, of the twenty years 1865–84, inclusive. The arithmetical mean of the highest and lowest readings was $58^{\circ}6'$. The rainfall (1.248 inches) fell short of the average for twenty years (1.962 inches) by .714 inch. There has not been so small a rainfall in June since 1877, when only .921 inch fell. On the other hand, 5.058 inches were registered in June, 1878. The rainy days were 10, compared with a twenty years' average of 14.7. In 1874 there were only 9 rainy days, in 1867 and 1868 only 6, and in 1865—the driest month of all—only 5. There was a heavy downpour on the evening of the 3rd (.551 inch) when some lightning occurred, as also on the 28th. Distant thunder was heard on the 30th. Hail fell on the 6th. No halos were observed—an evidence of the comparative infrequency of cirro-stratus cloud.

JULY.—True to its traditional character, July was a very showery month, rain falling on as many as 25 days, compared with a twenty-years' average of 17.6 rainy days. Nevertheless the rainfall was only 2.350 inches, or .149 inch below the average (2.499 inches) of the twenty years, 1865–84, inclusive. The explanation is that the rain fell chiefly in the form of showers—in fact the 28th was

the only thoroughly wet day, and on but five days did the rainfall exceed two-tenths of an inch. The mean temperature deduced from the Dry-bulb readings taken twice daily (at 9 A.M. and 9 P.M.) was 60.1° , or as nearly as possible the average; the mean temperature, calculated by Kaemtz's formula from the mean maximal and minimal readings, was 59.7° , compared with an average of 59.6° extending over the same twenty years mentioned above. The arithmetical mean of the highest and lowest readings was 60.8° . Owing to the prevalence of clouds and the frequency of showers by day, the extremes were not great—the highest reading of the screened thermometer being 70.7° (recorded on the 5th and 30th), and the lowest being 47.1° (recorded on the 19th). Distant thunder was heard in Dublin on the 6th and 24th, but this city enjoyed a complete immunity from thunderstorms, and there was no hail. The 31st was a close, damp day, and in the evening it became foggy.

AUGUST.—A very fine and summerlike month, with high temperature and scanty rainfall. The prevalent winds were southerly (S.E. to S.W.) and moderate in force. There was an absence of any deep or serious atmospherical depressions; but about the 12th heavy thunderstorms raged over a great part of the United Kingdom. The mean temperature deduced from daily readings of the Dry-bulb thermometer at 9 A.M. and 9 P.M. was 60.7° ; that calculated by Kaemtz's formula from the means of the daily maxima and minima was 60.3° —a value which is 1.4° above the average mean temperature, calculated in the same way, for the twenty years, 1865–84, inclusive. The arithmetical mean of the maximal and minimal readings was 61.5° . On two days—the 12th and 17th—the thermometer rose to 74.9° in the screen; on the night of the 28th–29th it fell to 44.6° . The rainfall was only .777 inch (scarcely more than three-quarters of an inch), compared with a twenty-years' average fall of 2.877 inches in August. In no other of the twenty years was there so small a rainfall in this month. The rainy days were but 8 in number, against a twenty-years' average of 15.5. In August, 1870, rain fell on only 7 days, but the amount was 1.514 inches, or nearly double the fall in 1884. In Dublin thunder and lightning occurred on the 11th; lightning was also seen on the 13th, 14th, and 28th. The atmosphere was foggy on the 9th, 11th, 12th, and 18th.

SEPTEMBER.—In keeping with the summer months of 1884, September was in all respects favourable. On the 6th, indeed, a deep depression passed over the country, and towards the end a series of low-pressure areas travelling north-eastwards outside the western shores of Ireland and Scotland, kept the weather in a changeable, showery condition; but in the middle of the month conditions were chiefly anticyclonic, and beautiful autumnal or even summerlike weather prevailed. The mean temperature deduced from the observations taken daily at 9 A.M. and 9 P.M. was 57.2° ; that calculated by Kaemtz's formula from the means of the daily maxima and minima was 56.9° , or nearly two degrees (1.8°) above the average mean temperature, estimated in the same way, for the twenty years, 1865–84, inclusive. The arithmetical mean of the maxima and minima was 58.0° . On the 9th the thermometer in the screen rose to 73.7° , on the 5th it fell to 45.1° . The rainfall was 1.214 inches, or but little more than one-half the average of twenty years, 2.289 inches. The rainy days (14), however, were nearly up to the average of 14.5. There were two occasions within the past twenty years on which September was drier than in 1884—namely, in 1865 and 1867 (rainfall=.056 inch and 1.176 inches respectively). In 1865 there were only 3 “rainy days.” In Dublin lightning was seen on the evening of the 1st; solar halos appeared on the 25th and 29th, and a lunar halo on the 7th. There was a bright aurora borealis on the 17th. There was more or less fog on the 8th, 10th, 11th, 12th, 17th, and 19th. Very heavy dews were observed in the anticyclonic period about the middle of the month.

OCTOBER.—“The time o' the year between the extremes of hot and cold”—this month was true to the description of October thus given by Shakspeare. Although a fine and dry month on the whole, a spell of bitterly cold and wintry weather occurred in the second week, and this was in turn followed by a stormy period towards the close, with sudden and extreme variations of temperature. The barometer stood remarkably high in the anticyclone of the first few days—the exceptional reading of 30.729 inches being recorded in Dublin on the 5th, and on the other hand, the very low reading of 28.14 inches was observed on the W. coast of Norway on the 27th. The mean temperature deduced from observations taken daily at 9 A.M. and 9 P.M. was 49.5° ; that calculated by Kaemtz's formula from the means of the daily maxima and minima was 49.2° —a value which is identical with the average mean temperature of the twenty years, 1865–84, inclusive. The arithmetical mean of the maximal and minimal readings was 50.3° . On the 2nd the screened thermometer rose to 64.5° , and on the 11th it fell to 33.8° —the grass minimum on this occasion being 29.2° . The rainfall was only .834 of an inch, but was distributed over as many as fourteen days. It was only a little more than one-fourth of the average rainfall for October, which is usually one of the rainiest months of the year, (average of the twenty years=3.025 inches on 17.2 days). The rainfall was smaller than that of any October in the twenty years, 1865–84, the nearest approach to it being .856 of an inch in 1868. The rainy days, however, were 14—a number exceeding those in 1866 and 1869 (13 and 11 respectively). In Dublin no electrical disturbances were observed. Hail fell on the 10th and 26th. The atmosphere was foggy on the 2nd, 4th, 5th, 20th, and 21st. There was a hoar frost on the morning of the 11th.

NOVEMBER.—At first unsettled and rainy, this month ultimately proved fine and quiet, and at the close cold and wintry. The mean temperature calculated from observations taken twice a day—at 9 A.M. and 9 P.M.—was 43.7° ; that calculated by Kaemtz's formula from the means of the daily maxima and minima was 43.0° , or 0.7° below the average of the twenty years, 1865–84, inclusive. The arithmetical mean of the maximal and minimal readings was 43.9° . On the 1st the thermometers in the screen rose to 58.6° ; on the 16th they fell to 31.1° ; on the 22nd the minimum on the grass fell to 27.0° . The mean height of the barometer was considerably over the average—30.153

inches, compared with 29·850 inches. At 9 A.M. of the 19th the very high reading of 30·711 inches was recorded, while the lowest observed reading was 29·340 inches at 7 P.M. of the 4th. The rainfall amounted to 1·412 inches on 14 days, against a twenty years' average of 2·312 inches on 16·8 days. Included in the twenty years are five Novembers with a smaller rainfall than that of the present month—namely, 1867 (1·258 inches), 1870 (1·218 inches), 1871 (1·258 inches), 1878 (1·338 inches), and 1879 (1·251 inches). In 1867 there were only 8 rainy days in November. In the present month more than one-third of the entire rainfall (·553 inch) fell on the 1st. In Dublin a solar halo was seen on the 2nd, a lunar halo on the 29th. More or less fog was noted on the 6th, 16th, 17th, 18th, and 29th. Hail fell on the 5th and 21st, and a fall of snow occurred in the early morning of the 30th.

DECEMBER.—Wet, stormy, and open during the first three weeks, the weather changed about the 20th, from which day to the close it was quiet, cold, and often foggy. The mean temperature deduced from daily observations at 9 A.M. and 9 P.M. was 41·2°; that calculated by Kaemtz's formula from the means of the daily maxima and minima was 40·8°, or 0·3° above the average of the twenty years, 1865–84, inclusive. The arithmetical mean of the maximal and minimal readings was 41·6°. On the 13th the maximum was 56·4°; on the 22nd the minimum was 27·3° in the screen, and 23·4° on the grass. The mean height of the barometer was 29·815 inches, or ·067 inch below the average. Pressure was seen to range from 28·909 inches at midnight of the 19th to 30·400 inches at 9 P.M. of the 21st—a difference of nearly *one and a half inches* (1·491) being thus recorded within 45 hours. The rainfall was 2·008 inches on 20 days, compared with a twenty-years' average of 2·516 inches on 17·0 days. In the 20 years, however, there were nine Decembers with a smaller rainfall, and 14 with a less number of rainy days. The bulk of the rainfall fell in the unsettled weather of the first three weeks—after the 20th only ·126 inch was measured on three days.

TABLE showing the Temperature of the Air in Dublin in 1884, and the Average Temperature for the Twenty Years 1865 to 1884, inclusive.

YEAR.	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.	Year.
1865, . . .	37·1	40·4	40·4	50·5	52·5	59·8	60·8	58·3	60·2	49·9	44·4	45·6	50·0

N.B.—The temperatures given above were deduced from the maximal and minimal readings of the Thermometer by Kaemtz's Formula—viz., min. + { max. — min. '41 } = Mean Temperature.

I have the honour to be

Your Excellency's faithful servant,

THOS. W. GRIMSHAW,

Registrar-General.

GENERAL REGISTER OFFICE,

CHARLEMONT HOUSE,

Dublin, 30th July, 1885.

ABSTRACT OF METEOROLOGICAL OBSERVATIONS taken at 40, Fitzwilliam-square, West, Dublin, during the Year 1884, by J. W. MOORE, M.D., UNIV. DUB., F.R.Q.C.P., F.R.Met.Soc.

Long. 6° 15' W.; Lat. 53° 20' N.; Height above Mean Sea Level, 51 feet; Thermometers, 4 feet above ground; Rain Gauge, 3 feet 4 inches above ground.

NOTE.—This table has been constructed for the years 1801 to 1831—By adopting the rates of increase of the male and female population between 1821 and 1831, as shown by the Irish Census Reports of 1831—the first complete Census of Ireland having been taken in 1821.

1832 to 1841—By adopting the rate of increase between the population of 1831 and 1841, according to the Irish Census Report of 1841.

1842 to 1846—By taking the English average birth-rate of 1 in 31, and death-rate of 1 in 45, and deducting the annual emigration from Ireland according to the returns received from the Emigration Commissioners in England.

1847 to 1851—The English birth-rate, as above, was used, deducting the number of deaths and the number of emigrants in each year, as given in the Irish Census Reports of 1851; an allowance, proportioned to the number of recorded deaths and the number of emigrants being made in each year for the excess of the number thus arrived at for 1851 over the actual population according to the Census of that year.

1852 to 1871—The English birth and death rates, as above, were used, deducting the number of emigrants according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over Census numbers for 1861 and 1871 as explained for the last period.

1872-84—By adding the Births registered in each year to the estimated population for the previous year, deducting the deaths and emigration, and adjusting the results for the years 1872-81, to allow for the discrepancy between the number thus arrived at for 1881 and the estimate based on the Census taken on the 3rd of April in that year.

ANNUAL ABSTRACTS.
OF
MARRIAGES, BIRTHS, AND DEATHS.
1884.

ABSTRACT OF MARRIAGES.—Marriages registered in Ireland, pursuant to the

REGISTRATION PROVINCES AND COUNTIES.*		AREA in Statute Acres, exclusive of the larger Rivers, Lakes, and Tideways.	Popula- tion, 1881.	TOTAL MARRIAGES.	MARRIAGES

MARRIAGES, BIRTHS, and DEATHS registered in the Year 1884.

Whereby: the minus sign (—) is prefixed to the number given in the column headed "Excess of Births over Deaths," it denotes that the births in the district, instead of exceeding the deaths, were, in fact, less than the Deaths to the extent stated.

NOTE.—The Registrars' Districts are subdivisions of the Unions or Superintendent Registrars' Districts, and are identical with the Dispensary Districts of the same names, except in a few instances.
The letter W denotes that the Registrar's District contains within its limits the Workhouse belonging to the Union or Superintendent Registrar's District.
Wherever the minus sign (—) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births in the Registrar's District, instead of exceeding the deaths, were, in fact, less than the deaths to the extent stated.
