REPORT

TO

HIS EXCELLENCY JOHN CAMPBELL, EARL OF ABERDEEN,

&c., &c., &c.

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

MAY IT PLEASE YOUR EXCELLENCY,—

I have the honour to submit, for your Excellency's information, the Twenty-second Annual Report on Marriages, Births, and Deaths in Ireland. The tables comprise all the usual details connected with the subject for the year 1885.

Some changes have been introduced into the arrangement of the present report as compared with its predecessors. Formerly Ireland was divided into eight "Divisions" for registration purposes, but as these divisions were found to have no practical significance with the public, and as their adoption caused considerable confusion in the compilation of the statistics it was given up in the year 1881, as pointed out in the eighteenth annual report of this department.

A further advance has been made in the present report towards the arrangement of the statistics so that they may accord with the recognised geographical divisions of the country. On this occasion for the first time the statistics of the Marriages, Births, and Deaths in Ireland, have been arranged according to the recognised provincial and county areas.

This new arrangement has been adopted without discontinuing the system of classification by Unions or Superintendent Registrars' districts, so that the collective tables are strictly comparable for all local purposes with those hitherto published. It is scarcely necessary to point out that any arrangement, however correct from a geographical point of view, which would have deprived the local authorities of exact readily available information regarding the vital statistics of their respective districts would have tended to destroy the practical utility of the statistics. By the arrangement now adopted the twofold object has been attained of providing the public with a simple and comprehensive view of the principal vital statistics of all important and familiar geographical areas, and of furnishing local authorities whether urban or rural, with an accurate and detailed measure of the health of the people living within their jurisdiction, so far as such can be measured by the birth-rate and death-rate of the people.

It gives me much pleasure to report to your Excellency that the work of the department was satisfactorily carried out during the year by the officers under my control.

The usual Weekly and Quarterly Returns were issued with regularity throughout the year.

In accordance with the provisions of the various Acts of Parliament (7 & 8 Vic. cap. 81, sec. 56, 26 Vic. cap. 11, sec. 49, and 26 & 27 Vic. cap. 90, sec. 16), it is the duty of the Registrar-General once in every year to transmit to the Lord Lieutenant general abstracts of the Marriages, Births, and Deaths, registered during foregoing year, such abstracts to be laid before Parliament. In the earlier years of registration it was often found difficult, indeed, impossible to comply with this requirement, so that the abstracts could be presented in a complete and critically accurate form, and be accompanied by an analysis of, and a report upon their contents. It was therefore necessary annually to present to Parliament a preliminary return, consisting of the unrevised Abstracts. These abstracts although practically correct were not, as already indicated, critically so; therefore a proper analysis could not be made, and this portion of the work, together with the compilation of the Detailed Annual Report had each year to be postponed until later on. During the past few years efforts have been made to surmount these difficulties, and by the zealous co-operation of all my assistants, I am enabled now for the first time to lay before your Excellency the "Abstracts," in conjunction with an analysis thereof, and a report upon the results of registration during the past year, at such an early date as to enable your Excellency to comply with the above quoted provisions of the Acts of Parliament, both in letter and in spirit, and in a more complete manner, than on any previous occasion. In anticipation of this result and with the permission of the Government and approval of the Law Officers of the Crown, I have been able to discontinue the issue of the preliminary Parliamentary Abstract above referred to.

The Search Department of the General Register Office shows a steady increase in the amount of business transacted, thus proving that the records deposited therein are steadily becoming more appreciated and more availed of by the public.

At page 17, will be found a table which shows the amount of work done by the Search Department since the commencement of the Acts for the Registration of Births and Deaths and of Roman Catholic Marriages in 1864. It will be observed that the number of searches and of certified copies issued has increased with great rapidity during the past few years. This is mainly due to the demand for certificates of births, consequent on the requirements of the Board of Intermediate Education and the Senate of the Royal University. Another important addition to the number of birth certificates required has commenced during the past year, owing to the fact that now twenty-one complete years have elapsed since the establishment of birth registration in Ireland, and therefore these certificates can now be used in some cases as proofs of their holders having attained full age. The demand for certificates of birth for this purpose may be expected to increase steadily, as the records in the custody of the department accumulate, a reference to the Indexes affording the readiest method of obtaining accurate information.

GENERAL SUMMARY.

The Marriages registered in Ireland during the year 1885 number 21,177; the Births 115,951; and the Deaths 90,712. Both absolutely and in proportion to the estimated population, the marriages and births are under the annual average for the preceding ten years; the death-rate is slightly in excess of the average.

The recorded natural increase of population, or excess of births over deaths, was 25,239: the loss by emigration amounted to 62,034; there would thus appear to have been a decrease of 36,795 in the population during the year, but against a portion of this decrease there is a set-off in immigration of which no official record has been obtained. The estimated population in the middle of the year was 4,924,342.

TABLE I.—Showing for each of the years 1875–85, the estimated Population; the number of Marriages, Births, and Deaths registered, and the number of Emigrants enumerated, with the rates per 1,000 of the estimated Population represented thereby; and the averages for the ten years 1875–84.

MARRIAGES.

The number of Marriages registered during the year was 21,177, being 1 in every 233, or 4.30 per 1,000, of the estimated population, being .25 under the rate for the previous year, and .15 under the average for the ten years, 1875–84.

Of the 21,177 Marriages registered during the year 1885, 14,591 were between Roman Catholics, 3,540 were celebrated according to the rites and ceremonies of the late Established Church; 2,233 were in Presbyterian Meeting-houses; 343 in "Registered Buildings" belonging to various religious denominations; only 457 by civil contract in the Registrars' offices; 8 were according to the usages of the Society of Friends; and 5 according to the Jewish rite.

Of the 3,540 Marriages according to the rites of the late Established Church, 77 were by special licence, 2,908 by licence, 418 after the publication of banns, 11 on Registrar's certificate, and in 126 instances there was no information afforded as to which of the foregoing methods was adopted.

* See page 162.

TABLE II.—Marriages registered in Ireland in 1885 and each of the previous ten years, according to the modes of celebration; with the rate per 1,000 of the population represented:—

1885, . . .	3,540	2,233	343	457	8	5	6,586	14,591	21,177	5·69	3·87	4·30

During the year 1885 there were issued by the Registrars 662 Licences for Marriage in Registered Buildings and in the Registrars' offices.

The number of Marriage Licences issued by the licensing Ministers of the several Presbyterian bodies is given in the following summary:—

Presbytery or Synod.	Number of Licensing Ministers on 31st December, 1885.	Number of Registered Meeting-houses on 31st December, 1885.	Number of Licences issued
1. General Assembly of the Presbyterian Church in Ireland,	144	558	2,170
2. Remonstrant Synod of Ulster,	8	19	44
3. Presbytery of Antrim,	4	8	11
4. United Presbytery or Synod of Munster,	2	2	—
5. Northern Presbytery of Antrim,	2	5	12
Total,	160	592	2,237

There being no civil restrictions as to the time or place for celebrating marriages between Roman Catholics in Ireland, a registration of the churches and chapels of the Roman Catholic Church is not necessary for the purposes of this office; but with reference to other religious bodies, a record is kept of the places of Divine worship in which marriages may lawfully be solemnized without special licence, and from this it appears that, on the 31st December, 1885, there were 1,498 churches and chapels of the late Established Church, 592 registered Presbyterian Meeting-houses, and 332 "Registered Buildings" belonging to various religious denominations. Compared with the previous year, these numbers show a decrease of 8 as regards the late Established Church, an increase of 4 "Registered Buildings," and no change in the number of Presbyterian Meeting-houses.

The following statement shows the several religious bodies having "Registered Buildings" in 1885:—

Denominations.	No. of Places of Worship.	Denominations.	No. of Places of Worship.	Denominations.	No. of Places of Worship.
Methodists,	200	Evangelical Union,	2	"Protestant Dissenters,"	1
Reformed Presbyterians,	37	Non-Subscribing Unitarians,	2	Non-Subscribing Christians,	1
Independents,	25	Christian Brethren,	2	"The Catholic Apostolic Church,"	1
Baptists,	20	Jews,	2	Independent Protestants,	1
Seceders,	11	Unitarians,	1	Salvation Army,	1
United Presbyterians,	11	Covenanters,	1		
Methodists, New Connexion,	6	United Original Seceders,	1	Total,	332
Moravians, or United Brethren,	6				

As more than a moiety of the annual number of Roman Catholic marriages in the provinces of Munster and Connaught are celebrated between Christmas and Shrovetide, the marriages registered in Ireland during the first quarter of the year always largely outnumber those in any of the other quarters. In 1885, the numbers recorded were—in the first quarter 7,193; in the second, 4,862; in the third, 4,437; and in the last 4,685.

The marriages of bachelors and spinsters constitute 85·8 per cent. of the total; those of widowers and spinsters 8·9 per cent.; of bachelors and widows 3·1 per cent.; and of widowers and widows 2·3 per cent. Thus, 11·2 in every 100 of the men married were widowers, and 5·3 per cent. of the women were widows; and in 14 instances in every 100 marriages one or both of the contracting parties had been in the married state before.

TABLE III.—The Number of Roman Catholic and of Other Marriages registered in each Quarter during the four years, 1882–85 :—

QUARTER ENDING THE LAST DAY OF	Years and Number of Marriages Registered.							
	1882.		1883.		1884.		1885.	
	Roman Catholic.	Others.	Roman Catholic.	Others.	Roman Catholic.	Others.	Roman Catholic.	Others.
March,	6,188	1,576	5,123	1,629	6,667	1,558	5,068	1,525
June,	3,184	1,724	3,392	1,561	3,241	1,625	3,253	1,609
September,	2,926	1,782	2,967	1,727	3,012	1,678	2,779	1,658
December,	2,933	1,766	3,134	1,835	3,053	1,851	2,891	1,794
Total,	15,181	6,848	14,616	6,752	15,873	6,712	14,591	6,586
General Total,	22,029		21,368		22,585		21,177	

A complete registry of the exact ages of the persons married would be valuable from many points of view; hence it is matter for regret that in the great majority of instances the ages are not recorded. The requirements of the law are technically complied with by the entry in the age column of "minor" or of "full age," as the case may be, and there seems to be a general and increasing inclination to take advantage of this circumstance, as in 1885 the ages of both parties were specified in only 5,357 instances, being about one-fourth of the total number of marriages. In the year 1865, when 30,802 marriages were registered, the ages of both parties were given in 13,910 instances.

Of 21,177 men married during the year, 548, or 2·59 per cent., were minors; and of the women married, 2,234, or 10·55 per cent., were under age. These proportions differ but slightly from the averages for the preceding ten years.

The highest proportion of husbands (3·21 per cent.) married under age in 1885, was in the province of Ulster, and in Connaught there was the highest per-centage of wives (12·68), not of full age.

It may be added that the per-centage of persons married in Ireland who were under age is very far below the corresponding rates in England and Scotland.

The signatures of the contracting parties in the marriage registers or certificates afford a rough test of the progress of elementary education. In the year 1885, 16,193, or 76·5 per cent., of the husbands, and 15,619, or 73·8 per cent., of the wives wrote their names, and the remainder signed by marks.*

These figures, though still leaving much to be desired, contrast hopefully with the corresponding results eleven years since, the per-centage of persons married in 1875 who wrote their names being—men 69·7, and women 63·3.

As usual, the most favourable results appear in Leinster, and the least satisfactory in Connaught, the number of those married who wrote their names varying from 81 in every 100 men and 81 in every 100 women, in the former province, to 67 per cent. of the men and 67 per cent. of the women in the latter.

In 3,082 instances, both of the parties married signed the register by "mark," and in 4,378 cases the register was thus signed by either the husband or the wife, so that in 7,460 instances, or 35·2 per cent. of the total number of marriages, one or both of the parties signed by mark; and in 13,717 instances, or 64·8 per cent., both parties wrote their names.

The number of marriages registered in each of the eleven years 1875–85; the proportion per cent. of persons married who wrote their names in the registers; of minors, of widowers, and of widows are given in the following Table for Ireland, and for each of the four provinces.

* The following communication, received in reply to a query relative to an illegible signature, illustrates some of the difficulties experienced in endeavouring to keep the records correct:—

"January 22nd, 1886.

"In reply to your letter of the 12th inst., No. —, relative to the marriage of — and —, No. —, I beg to say I lost no time as usual in making all the necessary inquiries. In the first instance I wrote to the husband, —, who lives many miles away from here, outside my district entirely, urgently requesting 'to be informed at once of all the particulars.' I received no reply to that letter, and hence my delay in replying to you. I then sought an interview with one of the clergymen in the husband's parish, who lives several miles also from here. He told me that the woman's maiden name was —. She was first married to a man of the name of —, and her name was — when she got married to —. Therefore, the hieroglyphics signed after — must have been intended for —. There is so much pride in the country at present, that no woman would give it to say that she could not write (particularly a bashful widow), once she had got the pen into her fingers. The clergyman was of opinion that she must have got a nervous tremor between the names of the two husbands, and decided on making a compromise, being doubtful as to which was best entitled to her hand and heart."

TABLE IV.—Showing as regards the **Marriages** in Ireland and in each of the Four Provinces during the years 1875–85, the proportion per cent. of Persons who signed their Names, of Persons not of Full Age, and of Re-marriages. The figures for the years 1875–84 refer to Registration Provinces; those for 1885 to the Provinces Proper.

Provinces.	Signed their Names in Writing.		Persons not of Full Age.		Re-marriages.		Provinces.	Signed their Names in Writing.		Persons not of Full Age.		Re-marriages.					
	Of 100 Men Married.	Of 100 Women Married.	Of 100 Men Married.	Of 100 Women Married.	Of 100 Men Married.	Of 100 Women Married.		Of 100 Men Married.	Of 100 Women Married.	Of 100 Men Married.	Of 100 Women Married.	Of 100 Men Married.	Of 100 Women Married.

In proportion to the estimated population at all ages, the registered marriages were most numerous in the province of Leinster, in which, however, the rate was only 4·7 per 1,000 persons; Ulster comes next, with 4·5 per 1,000; Munster third, with 3·6 per 1,000; and Connaught last, the rate being 3·0 per 1,000.

The highest rate in any county was 6·8 per 1,000 which was the marriage rate for Dublin; and the lowest 2·8 per 1,000, for Galway and Mayo. Between these, the most favourable were 6·5 for Antrim, and 4·8 for Down; and the least so 3·0 in Sligo and 3·1 in Clare, Kerry, Donegal and Roscommon.

BIRTHS.

The number of births registered during the year 1885 was 115,951—59,482 boys and 56,469 girls, or 105·3 of the former to every 100 of the latter—the rate afforded in proportion to the estimated population being 1 in 42·5, or 23·5 per thousand, which is considerably under the low average rate (25·0 per 1,000) for the ten years, 1875–84, and less than the rate in any of those years.

Of the 115,951 children whose births were registered in Ireland during the year 1885, 112,733, or 97·2 per cent. were legitimate, and 3,218, or 2·8 per cent., were illegitimate. The average per-centage of illegitimate births in the preceding 10 years was 2·5.

It is unnecessary to say that these results compare very favourably with the returns for most other countries.

Of the children born in wedlock during the year, 57,804 were males, and 54,929 females, being 105·2 of the former to every 100 of the latter, and of the illegitimate children 1,678 were males, and 1,540 females, or 109·0 boys to 100 girls.

Comparing the provinces, we find that the per-centage of children born in Ulster, who were illegitimate, was 4·3 ; in Leinster, 2·3 ; in Munster, 2·2 ; and in Connaught, 0·9.

TABLE V.—The Per-centage of Legitimate and of Illegitimate Births registered in Ireland during the years 1881–85, by Provinces.

Provinces.	Proportion per cent. of Legitimate Births.					Proportion per cent. of Illegitimate Births.				
	1881.	1882.	1883.	1884.	1885.	1881.	1882.	1883.	1884.	1885.
IRELAND,	97·5	97·3	97·4	97·3	97·2	2·5	2·7	2·6	2·7	2·8
LEINSTER,	97·8	97·8	97·9	97·6	97·7	2·2	2·2	2·1	2·4	2·3
MUNSTER,	98·2	98·0	97·9	97·8	97·8	1·8	2·0	2·1	2·2	2·2

CONNAUGHT,	99·2	99·1	99·3	99·2	99·1	0·8	0·9	0·7	0·8	0·9

The respective total birth-rates for the provinces in 1885 were—Leinster, 23·2 per 1,000 of the population ; Munster, 21·8 ; Ulster, 22·8 ; and Connaught, 21·3.

The four counties having the highest rates are Dublin, 28·3 per 1,000 inhabitants ; Antrim, 28·1 ; Down, 25·5 ; and Kerry, 23·1. Those with the lowest rates are—Monaghan, 17·7 ; Fermanagh, 18·9 ; Tyrone, 19·0 ; and Meath, 19·5.

Of the total births, 52·8 per cent. were registered in the first six months of the year (181 days), and 47·2 per cent. in the second half of the year (184 days).

The number registered in the first quarter was 30,344 ; in the second, 30,826 ; in the third, 28,119 ; and in the fourth, 26,662.

TABLE VI.—Showing, by **Quarterly Periods**, the number of Births registered in Ireland in each of the five years 1880–84, and the average number for that period ; also the number registered during each quarter of the year 1885 :—

DEATHS.

The deaths registered during the year amount to 90,712, being equal to 1 in 54·3 or 18·4 per 1,000 of the estimated population. The deaths of males number 45,089, and those of females 45,623, the former being equal to 18·7 in every 1,000 males living, and the latter representing 18·2 per 1,000 females.

The death-rate (18·4) is slightly over the average rate (18·3) for the preceding ten years.

As heretofore, very many of the Registrars furnished at the close of each quarter valuable notes on the sanitary condition of their respective districts. These notes were embodied in the Quarterly Returns issued from this department, and emanating as they did, from gentlemen qualified to speak decisively on the subject, it is to be hoped that they received the serious attention of the various Local Authorities intrusted with the administration of the Public Health Acts.

With respect to the death-rates for the four provinces, the rate for Connaught is only 13·0; that for Ulster is 17·6; for Munster, 17·7, and for Leinster, 20·2.

Of the thirty-two counties, the five having the lowest registered mortality are—Mayo, 12·3 per 1,000; Cavan, 12·9; and Galway, Leitrim and Sligo, each 13·1.

Those in which the rate was highest are—Dublin, 27·4; Antrim, 22·4; Waterford, 19·3; and Limerick, 19·2.

The deaths registered in the first half of the year generally outnumber those in the second. In 1885, 57·4 per cent. of the total deaths were registered in the six months, January to June inclusive, and only 42·6 per cent. in the remaining six months of the year.

The annual rates represented by the deaths registered in each quarter are as follow—First quarter, 21·8 per 1,000 of the population; second, 20·4; third, 15·1; and fourth, 16·3.

From Table on pp. 150–159, it will be seen that, of the 90,712 deaths registered during the year, 2,063 took place in Infirmaries and General Hospitals; 880 in Public Lunatic Asylums; 11,093 in Workhouses and Workhouse Hospitals; and 76,676, were of persons who died "At their Own Homes, &c." As in the Report for the preceding year an additional Table (see pages 160–161) is given showing like information for those Registrars' Districts in which the principal Urban Sanitary Districts in Ireland are situated.

TABLE VII.—Showing, by Quarterly Periods, the number of Deaths registered in Ireland in each of the five years, 1880–84, and the average number for that period; also the number registered during each quarter of the year 1885:—

CAUSES OF DEATH.*

I.—SPECIFIC FEBRILE OR ZYMOTIC DISEASES.

The deaths from Specific Febrile or Zymotic diseases registered during the year 1885, amounted to 8,165, or 166 in every 100,000 of the estimated population, being 333, or 5 per 100,000 persons, under the deaths from these causes in the preceding year, and much below the average for the ten years, 1875-84.

Of the 8,165 deaths from zymotic diseases 5,075, or 62·2 per cent., were amongst children under 10 years of age.

The deaths from the eight principal zymotic diseases† registered during 1885 form 7·9 per cent. of the deaths from all causes, and are equal to 145 in every 100,000 persons living; the average annual mortality from the same diseases in the preceding 10 years represents 10·2 per cent. of the average number of deaths from all causes, and is equal to 187 deaths in every 100,000 of the estimated mean population.

TABLE VIII.—Showing the Number of Deaths from the Principal Febrile or Zymotic Diseases registered in Ireland during the ten years 1875-84, and the Average Annual Number for that period, with the Number registered in Ireland, and in each of the four Provinces during the year 1885, and the Rates per 100,000 of the Population represented thereby.

Small-pox.—There were but 4 deaths from small-pox—2 in Leinster and 2 in Ulster—registered during last year. The average annual number of deaths from this disease for the ten years, 1875-84, was 278. In 1882 there were 129 deaths registered; in 1883 the number fell to 16, and during 1884 there was only 1 fatal case of the disease recorded.

Measles.—Deaths from measles, which had fallen from 1,518 in 1882 to 801 in 1883, and to 559 in 1884, rose to 1,323, or 26·9 per 100,000 of the population, last year, the disease having been very prevalent in a few localities. The 1,323 deaths consist of 358

* In the year 1881, some modifications were introduced into the classification of the causes of death, so as to bring it into accord with alterations in Nosology necessitated by the advance of Medical Science. These modifications are given in detail in the Eighteenth Report of the Registrar-General for Ireland, *Page 6, et seq.*, 1881.

† Small-pox, Measles, Scarlet Fever, Diphtheria, Whooping-cough, Fever, Diarrhoea (and Dysentery), and Cholera.

in Leinster; 156 in Munster; 743 in Ulster; and 66, only, in Connaught, where nearly one-half of the total number registered in the preceding year occurred. 296 of the 358 fatal cases of measles in the province of Leinster were registered in the Dublin Registration District; 620 of the 743 deaths in Ulster occurred in the Registrars' Districts comprising the town of Belfast; and 125 of the 156 deaths in Munster were in the union of Waterford. So that in these three localities more than three-fourths of the total number of deaths from measles in Ireland occurred. There were also 38 deaths in Ballymena union, 25 in Lisburn union, and 22 in Tobercurry union. It will thus be seen that in the far greater part of the country the mortality from measles was very light.

Scarlet Fever.—The number of deaths from this disease is 1,147, being a decrease of 230 as compared with the preceding year, and 653 under the average for the ten years 1875–84.

The deaths from scarlet fever in 1885 were distributed through the four provinces as follows:—Leinster, 247 (including 185 in the two Dublin unions, and 21 in Rathdown union); Munster, 526 (of which number 339 occurred in Cork county—including 53 in Bantry union; 33 in Clonakilty union; 89 in Cork union; 29 in Dunmanway union; 33 in Fermoy union; and 30 in Skibbereen union); 83 in the county of Kerry (including 55 in Killarney union); and 66 in Limerick county (including 34 in Glin union, part of); Ulster, 345 (119 of which occurred in Belfast union, 24 in Larne union, and 49 in Millford union); and Connaught, 29 only.

In Leinster, deaths from scarlet fever were equal to 19·3 per 100,000 of the population; in Munster, the rate was 39·5 per 100,000; in Ulster, 19·8; and in Connaught 3·5 only.

Diphtheria.—This disease proved fatal in 296 instances only, being 37 below the average annual number for the ten years 1875–84, and 58 under the number for the year 1884. In proportion to population the highest mortality (7·1 per 100,000 persons) was in the province of Ulster.

Whooping-cough.—The deaths (1,436) from whooping-cough are 281 under the average for the ten years 1875–84, and 398 under the number registered in the year 1884; they afford an annual rate of 29·2 per 100,000 of the estimated population. In proportion to population the mortality was highest in Munster and lowest in Connaught, the rates for these provinces being 44·7 and 7·1 per 100,000 persons respectively.

Fever.—The number of deaths from the several forms of continued fever was 1,664 (858 males and 806 females), being the lowest number registered in any year since registration was established in 1864; the average annual number for the ten years 1875–84, was 2,615; the number in 1884 was 1,893. The deaths recorded during last year are equal to a rate of 33·8 per 100,000 of the estimated population; the respective rates for the provinces being—Leinster, 35·3 per 100,000; Munster, 35·1; Ulster, 28·4; and Connaught, 30·4.

Of the registered deaths from fever, 505 were ascribed to typhus, 716 to typhoid or enteric, and 443 to simple continued fever, or vaguely as to "fever." The age periods, 45 and under 55 years, and 65 to 75, were those in which fever proved most fatal in proportion to the living at the same ages; the former yielding a rate of 41·74 per 100,000, and the latter 45·27. The lowest rate was 25·73 for the period "under 5 years old."

TABLE IX.—Showing for the year 1885 the Deaths from the several forms of Fever at each Age-Period, with the proportion to the number of the living at each Age represented thereby.

Erysipelas.—The deaths from erysipelas number 263, being 30 under the annual average for the preceding decade, but 18 over the number in the year 1884. The highest mortality in 1885, in proportion to the population, was in Leinster, and the lowest in Connaught.

Puerperal Fever.—The number of deaths from this disease registered in 1885 was 370, being 63 in excess of the average for the ten years, 1875–84, and 70 over the number in the year 1884.

Influenza.—There were but 36 deaths ascribed to this disease; the number in 1884 was 43, and the annual average for the ten years, 1875–84, was 76.

Diarrhœa and Dysentery.—The mortality from diarrhœa and dysentery was remarkably low, the number of deaths being 1,264 (equal to 25·7 per 100,000 of the population), or 302 under the number for the preceding year, and 585 below the average annual number for the ten years, 1875–84.

The rates for the provinces in 1885 were as follow:—Leinster, 25·3 per 100,000 persons; Munster, 25·5; Ulster, 28·6; and Connaught 12·7.

Simple Cholera.—Twenty-two deaths were ascribed to this disease—30 under the annual average for the ten years 1875–84.

Four males and 3 females died from *Hydrophobia*.

II.—PARASITIC DISEASES.

There were 115 deaths caused by diseases of this class.

III.—DIETETIC DISEASES.

The deaths in this class number 162; they comprise 154 from intemperance, 52 of which (47 males and 5 females) were caused by delirium tremens, and 102 (84 males and 18 females) come under the head of chronic alcoholism.

IV.—CONSTITUTIONAL DISEASES.

From diseases termed “constitutional” there resulted 16,630 deaths (7,846 males and 8,784 females), affording a rate of 1 in 5·5 of all the deaths, and equal to 338 in every 100,000 of the population.

Phthisis or Pulmonary Consumption proved fatal in 10,709 instances (4,923 males and 5,786 females) being equal to 217·5 in every 100,000 persons; the average annual number for the previous ten years was 10,456.

As heretofore, Leinster and Ulster yield the highest rates, and Connaught the lowest. The rates for the four provinces are as follow:—Leinster, 248 per 100,000 of the population; Ulster, 231; Munster, 178; and Connaught, 138.

Of the total deaths from phthisis, 7,337, or 73 per cent., were of persons between 15 and 45 years of age.

DEATHS FROM PHTHISIS in the years 1875–85.

Year.	1875.	1876.	1877.	1878.	1879.	1880.	1881.	1882.	1883.	1884.	Average 1875–84.	1885.	Rate per 100,000 living 1885.
No. of Deaths,	10,240	10,092	10,433	10,400	10,619	11,124	10,027	10,258	10,775	10,583	10,456	10,709	217·5.

Mesenteric Disease.—The deaths from mesenteric disease number 1,047—525 males and 522 females.

Gout.—Only 28 deaths from gout were registered (21 males and 7 females).

Cancer, Malignant Disease.—There were 1,925 deaths tabulated under this heading, of which 872 were those of males and 1,053 of females.

V.—DEVELOPMENTAL DISEASES.

The deaths in this class amount to 19,297, of which 18,839 (8,727 males and 10,112 females) were ascribed to “old age.” Of the remaining 458 deaths, 354 are tabulated under the head of “premature birth;” 23 were caused by cyanosis, 35 by spina bifida, &c.

VI.—LOCAL DISEASES.

The number of deaths from “local diseases” registered amounted to 37,276 (19,512 males and 17,764 females), or 1 in 2·4 of the deaths from all causes.

Diseases of the Nervous System.—From this group of diseases there resulted 8,653 deaths—4,614 males and 4,039 females. They include 3,109 from convulsions, (nearly all children), 1,462 from hemiplegia (brain paralysis), 1,062 from apoplexy, 1,028 from inflammation of the brain, 356 from epilepsy, 263 from insanity (general paralysis of the insane), 14 (2 males and 12 females) from chorea or St. Vitus’s dance, 263 from softening of the brain, &c.

Diseases of the Circulatory System.—Diseases of the circulatory system caused 5,037 deaths—2,582 males and 2,455 females.

*Diseases of the Respiratory System.**—The deaths from these diseases, amounted to 16,000 (8,404 males and 7,596 females), being equal to 324·9 in every 100,000 of the population. The average number for the preceding ten years was 16,433, the annual numbers varying from 14,046 in 1884 to 19,634 in 1879. The respective rates for the Provinces, in 1885, are Leinster, 365·8 per 100,000 persons; Munster, 339·9; Ulster, 297·9; and Connaught, 195·2.

As many as 10,279 of the deaths from these causes (4,933 males and 5,346 females) resulted from bronchitis; 3,264 (2,107 males and 1,157 females) were from pneumonia or inflammation of the lungs; 707 from croup; 303 from asthma and emphysema; 284 from pleurisy; 107 from laryngitis, &c.

DEATHS FROM DISEASES OF THE RESPIRATORY SYSTEM* in the Years 1875–85.

Year.	1875.	1876.	1877.	1878.	1879.	1880.	1881.	1882.	1883.	1884.	Average 1875–84.	1885.	Rate per 100,000 living. 1885.
No. of Deaths,	16,209	15,624	15,840	16,501	19,634	17,138	16,936	15,358	16,967	14,016	16,433	16,000	324·9.

Diseases of the Digestive System.—These diseases contributed 4,775 deaths (2,471 males and 2,304 females). They include 474 from enteritis or inflammation of the bowels; 411 from peritonitis or inflammation of the covering of the bowels; 378 from ileus or obstruction of the bowels; 236 from ulceration of the intestines; 160 from hernia; 7 (2 males and 5 females) from fistula; 223—140 males and 83 females—from cirrhosis of liver, &c.

Diseases of the Urinary System.—To the various affections of this order of diseases 1,490 deaths (1,077 males and 413 females) were ascribed. Of these deaths, 513 (307 males and 206 females) were from Bright's disease, 143 from nephritis or inflammation of the kidneys; 15 from ischuria or suppression of urine; 15 from stone in the bladder; 45 from uræmia, &c.

The remaining deaths from Local Diseases comprise 44 from *Diseases of the Lymphatic System and of Ductless Glands*; 675 from *Diseases of the Reproductive System* (including 180 from diseases of the Organs of Generation, and 495 from the Accidents of Childbirth); 282 from *Diseases of the Locomotive System*; and 259 from *Diseases of the Integumentary System*.

VII.—VIOLENT DEATHS.

The number of violent deaths registered during the year was 1,888 (1,289 males and 599 females), or 38·3 in every 100,000 of the population, being slightly under the average rate for the ten years 1875–84. Accidents or negligence caused 1,648 of these deaths (including 657 from fractures and contusions, 380 from burns or scalds, and 336 from drowning); there were 109 cases of homicide (murder and manslaughter), and 129 of suicide; 2 men were executed—both in the Province of Connaught.

DEATHS FROM VIOLENCE in the Years 1875–85.

Year.	1875.	1876.	1877.	1878.	1879.	1880.	1881.	1882.	1883.	1884.	Average 1875–84.	1885.	Rate per 100,000 living. 1885.
No. of Deaths,	2,107	2,086	2,051	2,041	1,985	1,975	2,152	1,936	1,945	1,899	2,023	1,888	38·3.

Inquests.—There were 2,011 inquests reported to the Registrars during the year 1885, being 1 inquest to every 45 deaths registered.

AGES.

Deaths of infants under 1 year old numbered 11,053, being equal to 9·5 per cent. of the number of births registered.

Amongst children under 5 years of age 19,330 deaths occurred—a mortality equal to 35·3 in every 1,000 of the living at that age. Of these, 10,187 were boys and 9,143 girls; the former number representing 36·6 in every 1,000 boys, and the latter 33·9 in every 1,000 girls under 5 years old.

The deaths of persons aged 65 years and upwards are equivalent to 10·0 per cent. of the living at that age.

Amongst the deaths registered are 659 of persons stated to have been aged 95 years and upwards—318 males and 341 females.

* Exclusive of Phthisis, or Pulmonary Consumption, for which see "Constitutional Diseases."

EMIGRATION.

According to the Returns obtained by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several Irish seaports, the number of emigrants who left Ireland during the year 1885 amounted to 62,034; of these 30,873 were males and 31,161 were females. Of the whole number, 10,152 were from the Province of Leinster; 20,436 from Munster; 19,498 from Ulster; and 11,948 from Connaught.

Of the total emigrants from Ireland in 1885, 13.0 per cent. were under 15 years of age; 75.2 per cent. were between 15 and 35 years old; and 11.8 per cent. were 35 or upwards.

PRICES OF PROVISIONS, AND PAUPERISM.

The average prices, in Dublin, of potatoes and beef in 1885 were under those for the preceding year; the average price of Messrs. Manders and Co.'s 4-lb. loaf was 6*d.*, being $\frac{1}{4}$ *d.* under the average price for 1884. Oatmeal averaged 17*s.* 6*d.* per cwt., being the same average price as in 1884; the average prices of potatoes ranged from 2*s.* 4*d.* to 3*s.* 3*d.* per cwt., against 2*s.* 8*d.* to 3*s.* 6*d.* in 1884; and those of beef from 52*s.* 6*d.* to 66*s.* per cwt., against 62*s.* 6*d.* to 72*s.* in 1884.

TABLE X.—AVERAGE PRICES in DUBLIN of BREAD, OATMEAL, POTATOES, and BEEF, during the years 1875-85, and the AVERAGE NUMBER of PERSONS in IRELAND receiving IN-DOOR and OUT-DOOR RELIEF on Saturdays in those years; also the AVERAGE PRICES of PROVISIONS and the AVERAGE NUMBER of PERSONS in RECEIPT of RELIEF during each quarter of the year 1885.

* Compiled from Returns furnished by the Local Government Board.

Surveying the period covered by the several Tables in this Report, *i.e.*, 1885, and the ten years preceding, it is found that beef was lowest in the year 1885, when the average prices ranged from 52*s.* 6*s.* to 66*s.* per cwt.; bread was also lowest in 1885, in which year the average price of Messrs. Manders' 4-lb. loaf was 6*d.*; oatmeal in 1881, when the average price was 14*s.* 1*d.* per cwt.; and potatoes in 1885, when the average range of prices was from 2*s.* 4*d.* to 3*s.* 3*d.* per cwt. The highest average price of bread was 8*d.* in the years 1877; of oatmeal, 17*s.* 10*d.* in 1877; the highest range for potatoes, 4*s.* 9*d.* to 7*s.* 6*d.* per cwt. in 1878, and for beef, 66*s.* 6*d.* to 77*s.* per cwt. in 1883.

From Returns, for which I am indebted to the Local Government Board, it appears that the average number of workhouse inmates in Ireland on Saturdays during the year 1885 was 47,009, being 1,232 under the average for the preceding year; and that the average number of persons receiving out-door relief was 58,631, or 662 over the corresponding number for 1884.

THE WEATHER.

The following particulars have been derived from Returns of Meteorological Observations taken during the years 1865-85, at 40, Fitzwilliam-square, West, Dublin, by J. W. MOORE, Esq., M.D., Univ. Dubl., F. K. Q. C. P., F. M. S., Observer at Dublin for the Meteorological Office, London:—

The mean Atmospheric Pressure has been obtained from daily readings of the barometer at 9 A.M. and 9 P.M., corrected and reduced to 32° Fahrenheit at the mean sea level. The Mean Temperature values have been deduced from the maximal and minimal readings of the thermometer in the shade by Kaemtz's Formula, viz., $min. + \{max. - min. \times .41\} = Mean\ Temperature$. The Rainfall is that measured daily at 9 A.M. A *rainy day* is one on which at least one-hundredth (.01) of an inch of rain falls within the twenty-four hours from 9 A.M. to 9 A.M.

The *Mean Height of the Barometer* during the year 1885 was 29.902 inches. The highest observed reading was 30.657 inches at 9 A.M., on December 23rd. The lowest observed reading was 28.413 inches, at 12.30 P.M., on January 31st. The extreme range of atmospheric pressure was 2.244 inches compared with 2.579 inches in 1884.

The *Mean Temperature* of the year, deduced from the maximal and minimal readings of the thermometer in the shade by Kaemtz's formula, was 47.6°. The highest reading was 77.0 on July 25th; the lowest reading was 24.3° on December 11th. The average mean temperature for the years 1865-84 calculated in the same way, was 48.9°. The mean temperature deduced from the daily readings of the dry bulb thermometer at 9 A.M. and 9 P.M. was 48.2.

Rain fell on 198 days, including snow or sleet on 16 days, and hail on 37 days. The average number of rainy days in the years 1865-84 was 194.6. The total rainfall measured 26.614 inches, compared with an average of 28.015 inches in the twenty years 1865-84. During the first half of 1885 (January to June, inclusive) the rainfall was 12.908 inches on 102 days; during the second half (July to December, inclusive) 13.706 inches fell on 96 days.

As regards the *Direction of the Wind*, 730 observations were made during the year, with this result—N., 62; N.E., 56; E., 70; S.E., 62; S., 66; S.W., 106; W., 173; N.W., 85; Calms, 50.

Appended are some remarks upon the different months of the year 1885.

JANUARY.—A dull month, of average temperature, with a remarkable prevalence of south-easterly winds, densely clouded skies, and a deficient rainfall, scattered, however, over an excess of rainy days. The last few days were warm and very unsettled, with squally southerly winds and frequent showers by night. The mean temperature deduced from daily observations at 9 A.M. and 9 P.M. was 41.8°—a value about equal to the average, but 3.9° below the corresponding mean of January, 1884, which was an unusually mild and frostless month. The mean temperature, calculated by Kaemtz's formula from the daily maxima and minima, was 40.8°, or exactly equal to the average for January, calculated in the same way for the twenty years, 1865-84, inclusive. The arithmetical mean of the daily maximal and minimal temperature was 41.5°. The mean temperature of the month was almost identical with that of December, 1884. The barometrical pressure averaged 29.800 inches, compared with 29.881 inches in the ten years, 1871-80, inclusive. The highest observed reading of the barometer was 30.239 inches at 9 A.M. of the 16th; its lowest observed

reading was 28.413 inches at 12.30 P.M. of the 31st. The rainfall amounted to only 1.617 inches, against a twenty years' average of 2.243 inches; but the fall was distributed over as many as twenty-three days, compared with a similar average of 17.1 rainy days.

In Dublin the following phenomena were observed—a solar halo on the 5th, a lunar halo on the 27th, lunar coronæ on the 26th and 27th; lightning on the 31st, snow or sleet on the 8th, 14th, and 17th; hail on the 14th, 15th, and 17th; more or less fog on the 3rd, 4th, 18th, and 19th; lunar rainbows on the 31st; gales on the 8th, 10th, 17th, 28th, and 31st.

FEBRUARY.—Although the mean temperature very closely corresponded to the average of the previous twenty years, the weather was very changeable—alternate periods of cold and warmth prevailing in alternate weeks. The rainfall and rainy days were both above average, and atmospheric pressure was considerably below average. The mean temperature deduced from observations taken daily at 9 A.M. and 9 P.M. was 42.8°; that calculated by Kaemtz's formula from the means of the daily maxima and minima was 42.7°—a value which is almost identical with the average mean temperature of the twenty years, 1865-84, inclusive, calculated in the same way (42.5°). The arithmetical mean of the maximal and minimal readings was 43.6°. On the 26th the screened thermometer rose to 58.4°, and on the 19th it fell to 26.1°—the grass minimum on this occasion being 22.0°. These were the lowest temperatures recorded in Dublin during the past winter. The rainfall amounted to 2.812 inches, and was distributed over as many as nineteen days. The average rainfall for February in the twenty years, 1865-84, inclusive, was 2.244 inches, falling on 17.6 days. The mean atmospheric pressure was only 29.543 inches, compared with an average for February in the ten years, 1871-80, inclusive, of 29.862 inches. The barometer fell to 28.740 inches at 9 A.M. of the 2nd, and rose to 30.194 inches at 9 P.M. of the 28th. The extreme range of pressure was, therefore, 1.454 inches, or nearly an inch and a half. This is a striking testimony to the cyclonic character of the weather experienced during the month. Snow, sleet, and hail were observed on the 17th and 18th. A solar halo was seen on the 12th. There was a fog on the 15th. Gales, or high winds prevailed on several occasions. A lunar rainbow appeared on the evening of the 21st.

On Monday evening, the 16th, rain began to fall in Dublin. This was succeeded by a remarkable snowstorm early next morning. By 9 A.M. the snow lay several inches deep even in the streets of the city. The rainfall in 18 hours amounted to *one inch* (1.001 inch).

MARCH.—A cold, generally dry month—searching "polar" winds prevailed to a large extent, and the distribution of atmospheric pressure was often anticyclonic in the neighbourhood of the British Islands. The mean height of the barometer was 30.091 inches, or 0.168 inch above the average value for March—namely, 29.923 inches. The mercury rose to 30.647 inches at 9 A.M. of the 14th, and sank to 29.064 inches at 9 P.M. of the 3rd. The range of atmospheric pressure was, therefore, 1.583 inches—slightly more than an inch and a half. The mean temperature deduced from daily readings of the dry bulb thermometer at 9 A.M. and 9 P.M. was 41.1°; that calculated by Kaemtz's formula from the means of the daily maxima and minima was 40.7°, or 2° below the average mean temperature for March, calculated in the same way, in the twenty years, 1865-84, inclusive (42.7°). The arithmetical mean of the maximal and minimal readings was 41.8°. On the 26th the thermometers in the screen rose to 58.6°—wind S.W.; on the 12th, and again on the 15th, they fell to 29.0°. The minimum on the grass was 25.1° on the 12th. The rainfall was 1.530 inches, distributed over 13 days. The average rainfall for March in the twenty years, 1865-84, inclusive, was 2.081 inches, and the average number of rainy days was 16.5. Both rainfall and rainy days, accordingly, were considerably below the average. Snow fell on the 18th, sleet on the 10th and 29th, and hail on the 6th, 8th, 18th, and 27th. A solar halo was seen on the 31st. An aurora borealis appeared on the evening of the 15th. The atmosphere was foggy on the 3rd and 4th, as well as in the anticyclonic periods from the 10th to the 15th, the 21st to the 23rd, and the 30th and 31st.

The month was remarkable for its bleakness and dryness. It is worth noting that the mean minimal temperature on the grass, 30.9°, was 3.3° below that recorded in January, and 2.9° below that recorded in February.

APRIL.—Until the 17th the weather remained cold and dry, with searching "polar" winds. On the date mentioned the long delayed spring may be said to have arrived with the setting in of equatorial winds. A burst of summerlike warmth on the 18th and 19th was followed by copious rains, soft winds and occasional hot sunshine by day, and rather low temperatures by night. The mean height of the barometer was 29.776 inches, or 0.081 inch below the average value for April, namely 29.857 inches. The mercury rose to 30.319 inches at 9 A.M. of the 19th, and sank to 28.846 inches at midnight of the 24th. The observed range of atmospheric pressure was, therefore, 1.473 inches—slightly less than an inch and a half. The mean temperature deduced from daily readings of the dry bulb thermometer at 9 A.M. and 9 P.M. was 46.1°; that calculated by Kaemtz's formula from the means of the daily maxima and minima was 45.6°, or 1.4° below the average mean temperature for April, calculated in the same way, in the twenty years, 1865-84, inclusive, (47.0°). The arithmetical mean of the maximal and minimal readings was 46.7°. On the 19th the thermometers in the screen rose to 66.1°—wind variable; on the 3rd they fell to 32.2°. The minimum on the grass was 26.4° on the 3rd. The rainfall was 2.911 inches, distributed over 16 days. The average rainfall for April in the twenty years, 1865-84, inclusive, was 2.029 inches, and the average number of rainy days was 15.0. Both rainfall and rainy days, accordingly were above the average. Sleet fell on the 1st and 5th, and hail on the 9th and 16th. The atmosphere was foggy on the 3rd, 14th, 15th, 17th, and 18th.

Of the rainfall registered in Dublin (2·911 inches), only ·597 inch was measured prior to the 21st, and this included one heavy fall of ·484 inch on Easter Day, the 5th. The rainfall of the last nine days of the month amounted to 2·314 inches, or 79·5 per cent. of the whole.

MAY.—May, 1885, will be remembered as for the most part a cold, showery month. Up to the 24th there was a remarkable and persistent deficit of temperature, associated with a prevalence of "polar" winds—chiefly from N.W., and frequent hail showers. The coldness of the weather was probably due to the melting of snow and ice in Russia and the Baltic on the one hand, and on the other to the presence of vast ice-fields in the Atlantic as far south as Lat. 44°, and as far east as Long. 46°. The distribution of cold and warmth during the month was similar to that observed in April—first came a long cold period, and then a sudden change to warmer weather; but in May the maximal temperature recorded in the shade—64·5°—fell short of the maximum in April—66·1°—by 1·6°.

The mean height of the barometer was 29·779 inches, or 0·217 inch below the average value for May—namely 29·996 inches. The mercury rose to 30·259 inches at 9 P.M. of the 11th, and sank to 29·167 inches at 3·30 P.M. of the 20th. The observed range of atmospherical pressure was, therefore, 1·092 inches—slightly less than an inch and one-tenth. The mean temperature deduced from daily readings of the dry bulb thermometer at 9 A.M. and 9 P.M. was 48·7°; that calculated by Kaemtz's formula from the means of the daily maxima and minima was 47·4°, or 3·5° below the average mean temperature for May calculated in the same way, in the twenty years, 1865–84, inclusive (50·9°). It so happens that the month was colder than any May for at least twenty years, but the mean temperature in 1869 (47·5°), and in 1879—the celebrated cold year—(47·6°), very closely approximated to that of the March-like May of 1885. The arithmetical mean of the maximal and minimal readings was 48·7°. On the 28th the thermometers in the screen rose to 64·5°—wind S.W.; on the 7th they fell to 32·7°—wind N.W. The minimum on the grass was 28·9° on the 7th. The rainfall was 2·532 inches, distributed over 23 days. The average rainfall for May in the twenty years, 1865–84, inclusive, was 1·938 inches, and the average number of rainy days was 15·1. Both rainfall and rainy days, accordingly, were very much above the average. Sleet fell on the 6th and 7th, and hail on the 1st, 2nd, 6th, 7th (Graupel), 8th, 10th, 14th, 16th, 17th, 22nd, and 23rd. The atmosphere was foggy on the 20th only.

There were thunderstorms with hail at 10 A.M. and 12·15 P.M. of the 2nd, and lightning was seen on the evening of the 10th.

JUNE.—A dry, cool, generally fine month. Polar winds predominated, but much warm sunshine modified their searching character. The rainfall was distributed over only eight days and occurred in a few heavy downpours. A striking feature of the month was the luminous appearance of strands of cirrus cloud on the northern horizon late at night on several occasions, and which was clearly due to reflected daylight.

The mean height of the barometer was 30·066 inches, or 0·142 inch above the average value for June—namely, 29·924 inches. The mercury rose to 30·388 inches at 9 a.m. of the 27th, and sank to 29·438 inches at 9 a.m. of the 20th. The observed range of atmospherical pressure was, therefore, 0·950 inch—slightly less than one inch. The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 56·4°; that calculated by Kaemtz's formula from the means of the daily maxima and minima was 54·8°, or 1·8° below the average mean temperature for June calculated in the same way, in the twenty years, 1865–84, inclusive (56·6°). The past month was colder than any June within the past twenty years, except 1882, when the mean temperature was 54·7°. In 1869 and in 1879—the celebrated cold year—the mean temperature (54·9°), very closely approximated to that of June 1885. The arithmetical mean of the maximal and minimal readings was 56·2°. On the 3rd the thermometers in the screen rose to 73·3°—wind S.; on the 10th they fell to 40·9°—wind N. to E. The minimum on the grass was 34·0° on the 10th. The rainfall was 1·506 inches, distributed over only eight days. The average rainfall for June in the twenty years, 1865–84, inclusive, was 1·962 inches, and the average number of rainy days was 14·7. Both rainfall and rainy days, accordingly, were decidedly below the average.

There was no sleet or hail; nor did electrical disturbances occur near Dublin. An aurora borealis was seen on the night of the 9th. Solar halos were observed on the 6th and 10th, and the atmosphere was foggy on the 1st and 7th.

On the 3rd the maximal temperature in Dublin was 73·3°, and there was unusually hot sunshine. Next day a wave of great heat passed over the S.E., E., and N.E. of England, the thermometer rising to 80° at Spurn Head, 81° at York and Oxford, 83° in London, 84° at Loughborough, and 85° at Cambridge. A remarkable decrease of temperature followed, so that on Saturday, the 6th, a minimum of 38° was recorded at Parsonstown. During the previous night (5th–6th) luminous cirri, resembling silvery clouds, were seen on the northern horizon. This appearance was seen on several occasions subsequently in the course of the month, and was probably due to the reflection or refraction of light from cirri floating at a great elevation.

JULY.—The month was very fine, and for July unusually dry. There were but 10 rainy days, and the rainfall amounted to only 46 per cent. of the average (1·154 inches compared with 2·499 inches). The mean temperature was only equal to the average, for the great heat of the last ten days was counterbalanced by a cold period which lasted from the 12th to the 20th.

The mean height of the barometer was 30·162 inches, or 0·240 inch above the average value for July—namely, 29·922 inches. The mercury rose to 30·386 inches at 9 a.m. and 9 p.m. of the 22nd, as well as at 9 a.m. of the 26th and 28th, and sank to 29·649 inches at 9 p.m. of the 19th. The

observed range of atmospherical pressure was, therefore, 0.737 inch—slightly less than three-quarters of an inch. The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 60.6°; that calculated by Kaemtz's formula from the means of the daily maxima and minima was 59.6°, or precisely the average mean temperature for July, calculated in the same way, in the twenty years, 1865-84, inclusive (59.6°). The arithmetical mean of the maximal and minimal readings was 60.8°. On the 25th the thermometers in the screen rose to 77.0°—wind S.E.; on the 1st they fell to 44.7°—wind W.N.W. The minimum on the grass was 35.4° on the 1st. The rainfall was 1.154 inches, distributed over ten days. The average rainfall for July in the twenty years, 1865-84, inclusive, was 2.499 inches, and the average number of rainy days was 17.6. Both rainfall and rainy days, accordingly, were, as in June, decidedly below the average. At Greystones, Co. Wicklow, the rainfall for the month was .730 of an inch, distributed over ten days.

There was no hail; nor did electrical disturbances occur near Dublin. The atmosphere was foggy on the 19th, 22nd, 23rd, and 26th, and frequently hazy during the anticyclonic period after the 20th.

AUGUST.—A very cool, changeable month, periods of broken and of settled weather occurring in marked contrast, and an unusual preponderance of winds from "polar" quarters. More than half the rainfall (56.3 per cent.) was measured on the 4th, and the rainy days were only 14, compared with an average of 15.5, so that the month, although cold, cannot be considered as a wet one.

The mean height of the barometer was 29.992 inches, or 0.088 inch above the average value for August—namely, 29.904 inches. The mercury rose to 30.324 inches at 9 a.m. of the 14th, and sank to 29.246 inches at 9 a.m. of the 10th. The observed range of atmospherical pressure was, therefore, 1.078 inches—slightly less than an inch and one-tenth. The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 56.6°, or 4° below the value for July, 1885; that calculated by Kaemtz's formula from the means of the daily maxima and minima was 55.9°, or precisely 3° below the average mean temperature for August, calculated in the same way, in the twenty years, 1865-84, inclusive (58.9°). The arithmetical mean of the maximal and minimal readings was 57.1°. On the 17th the thermometers in the screen rose to 71.4°—wind N.W.; on the 14th they fell to 41.2°—wind also N.W. The minimum on the grass was 33.0° on the 14th. The month was colder than any August in the preceding twenty years, the nearest approach being in 1881, when the mean temperature by Kaemtz's formula was 56.0°. The rainfall was 3.050 inches, distributed over 14 days. On the 4th hail and rain fell in quantities (.660 inch) between 10.15 and 11.20 a.m., accompanied by distant thunder, and at the last-named hour the temperature was only 45.4°. After 6 p.m. rain again fell in torrents—the total measurement at 9 a.m. of the 5th being 1.719 inches. The local character of this deluge may be appreciated from the fact that at Greystones, Co. Wicklow, the fall was scarcely more than one-tenth the amount mentioned—namely, .174 of an inch. The average rainfall in Dublin for August in the twenty years, 1865-84, inclusive, was 2.877 inches, and the average number of rainy days was 15.5. The rainfall, therefore, was somewhat above, while the rainy days were perceptibly below, the average. At Greystones, Co. Wicklow, the rainfall for the month was 2.579 inches, distributed over 13 days.

SEPTEMBER.—The weather was very unsettled, rainy and cool during the greater part of this month. The "Atlantic Depression" between the British Isles and Iceland was well developed, and the distribution of atmospheric pressure was generally cyclonic, with prevailing winds from westerly points (S.S.W. to N.W.).

The mean height of the barometer was 29.816 inches, or 0.101 inch below the average value for September—namely, 29.917 inches. The mercury rose to 30.272 inches at 9 p.m. of the 21st, and sank to 29.150 inches at 9 a.m. of the 30th. The observed range of atmospherical pressure was, therefore, 1.122 inches—slightly more than an inch and one-tenth. The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 53.3°, or 3.3° below the value for August, 1885; that calculated by Kaemtz's formula from the means of the daily maxima and minima was 53.2°, or 1.9° below the average mean temperature for September, calculated in the same way, in the twenty years, 1865-84, inclusive (55.1°). The arithmetical mean of the maximal and minimal readings was 54.4°. On the 12th the thermometers in the screen rose to 68.9°—wind S.W.; on the 27th they fell to 34.4°—wind N.W. The minimum on the grass was 27.9° on the 27th. The past month was decidedly cold, but not so cold as September in 1866 (M. T.=51.9°), 1873 (M. T.=53.0°), 1877 (M. T.=52.4°), and 1882 (M. T.=52.0°). The rainfall was 2.862 inches, distributed over as many as 23 days. The average rainfall for September in the twenty years, 1865-84, inclusive, was 2.289 inches, and the average number of rainy days was 14.5. The rainfall, therefore, was somewhat above, while the rainy days were very much above the average.

There was hail on the 10th, 25th, and 30th. Lightning was seen on the 2nd, 4th, 26th, 27th, and 30th. An aurora borealis appeared on the 4th. Solar halos were visible on the 11th and 22nd. The atmosphere was foggy on the 14th and 17th.

OCTOBER.—A very cold, unsettled and rainy month, polar winds predominating largely; frequent hail showers, and in Scotland sleet and snow. The month was specially memorable for the number and depth of depressions, which travelled eastwards across the southern portion of the British Islands or up the English Channel, usually as secondaries or subsidiaries to still more extensive areas of low pressure in the far North. Hence it came about that the weather was more broken and the rainfall was heavier and more persistent in the south than in the north—indeed, Scotland enjoyed comparatively fine weather, even if it was very cold for the time of year.

The mean height of the barometer was 29.773 inches, or 0.074 inch below the average value for October—namely, 29.847 inches. The mercury rose to 30.288 inches at 9 p.m. of the 15th, and sank

to 29·044 inches at 4 a.m. of the 26th. The observed range of atmospherical pressure was, therefore, 1·244 inches—slightly less than an inch and a quarter. The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 44·8°, or 8·5° below the value for September, 1885; that calculated by Kaemtz's formula—from the means of the daily maxima and minima was 44·6°, or 4·6° below the average mean temperature for October, calculated in the same way, in the twenty years, 1865–84, inclusive (49·2°). The arithmetical mean of the maximal and minimal readings was 45·5°. On the 2nd the thermometers in the screen rose to 57·1°—wind S.W.; on the 25th they fell to 33·2°—wind calm. The minimum on the grass was 28·6° on the 25th. The past month was extremely cold, but not quite so cold as October of 1880 (M. T. =44·5), which was the coldest October in the twenty years 1865–84. The rainfall was 3·500 inches, distributed over as many as 22 days. The average rainfall for October in the twenty years, 1865–84, inclusive, was 3·025 inches, and the average number of rainy days was 17·2. The rainfall, therefore, and the rainy days were decidedly above the average.

There was hail on the 8th, 10th, 11th, 12th, 13th, 23rd, and 27th. Lightning was seen on the 12th, and thunder was heard at 8·25 a.m. of the 23rd. A lunar halo was visible on the 20th. The atmosphere was foggy on the 17th, 18th, 19th, 23rd, and 25th.

NOVEMBER.—This was a mild, very dull month—south-easterly and easterly winds preponderating to a remarkable extent. As the prevailing winds were off the sea in Dublin, temperature was higher in that city than in most parts of the country. The rainfall was very small up to the 21st, only ·495 of an inch (not quite half an inch); but a stormy, rainy period followed, lasting nearly to the end of the month.

The mean height of the barometer was 29·838 inches, or 0·029 inch below the average value for November—namely, 29·867 inches. The mercury rose to 30·316 inches at 9 a.m. of the 16th, and sank to 28·799 inches at 11 p.m. of the 26th. The observed range of atmospherical pressure was, therefore, 1·517 inches—slightly more than an inch and a half. The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 45·6°, or 0·8° above the value for October, 1885; that calculated by Kaemtz's formula from the means of the daily maxima and minima was 45·1°, or 1·4° above the average mean temperature for November, calculated in the same way in the twenty years, 1865–84, inclusive (43·7°). The arithmetical mean of the maximal and minimal readings was 45·9°. On the 3rd the thermometers in the screen rose to 62·1°—wind S.W.; on the 15th they fell to 31·0°—wind N. The minimum on the grass was 24·8° on the 15th. The month was very mild, but not nearly so mild as November of 1881 (M. T. =49·4°), which was by far the warmest November in the twenty years 1865–84. November was also warmer in 1866 (45·4°) and in 1874 (45·8°) than in the present year. It will be noted that there was actually an increase of temperature from October to November. The rainfall was 2·398 inches, distributed over 17 days. The average rainfall for November in the twenty years, 1865–84, inclusive, was 2·312 inches, and the average number of rainy days was 16·8. The rainfall, therefore, and the rainy days were both very slightly above the average.

There was hail on the 15th, and sleet fell on the 4th. A lunar corona was visible on the 21st. The atmosphere was foggy on the 11th, 12th, 15th, 21st, 22nd, and 23rd.

On the night of the 27th a splendid meteor shower was seen in most parts of Europe—the radiant point being in the constellation "Andromeda." This display takes place at intervals of thirteen years, when the earth's path intersects the orbit of Biela's comet. After midnight temperature rose in Dublin to 55·4°.

DECEMBER.—Very changeable as regards temperature, but generally a fine although cloudy month. Both the rainfall and the rainy days were much below the average, while atmospherical pressure was considerably, and temperature was perceptibly, above it. A sharp frost prevailed between the 7th and the 12th, and another brief cold spell occurred after the 27th.

The mean height of the barometer was 30·184 inches, or 0·302 inch above the average value for December—namely, 29·882 inches. The mercury rose to 30·657 inches at 9 a.m. of the 23rd, and sank to 29·170 inches at 11 p.m. of the 3rd. The observed range of atmospherical pressure was, therefore, 1·487 inches—slightly less than an inch and a half. The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 41·9°, or 3·7° below the value for November, 1885; that calculated by Kaemtz's formula from the means of the daily maxima and minima was 41·2°, or 0·7° above the average mean temperature for December, calculated in the same way, in the twenty years, 1865–84, inclusive (40·5°). The arithmetical mean of the maximal and minimal readings was 42·0°. On the 16th the thermometer in the screen rose to 57·7°—wind S.W.; on the 11th the temperature fell to 24·3°—wind calm. The minimum on the grass was 20·1° on the same date. The month was chiefly mild, but there was a spell of frost from the 7th to the 12th, and shorter periods of cold weather occurred towards the close also. The rainfall was only ·742 inch (less than three quarters of an inch), distributed over 10 days. The average rainfall for December in the twenty years, 1865–84, inclusive, was 2·516 inches, and the average number of rainy days was 17·0. The rainfall, therefore, and the rainy days were both very remarkably below the average. ☉

There was hail on the 7th and 28th, and snow or sleet fell on the 10th, 28th, 29th, and 30th. A lunar corona and halo were visible on the 23rd. The atmosphere was foggy on the 5th, 11th, 15th, 18th, 20th, 23rd, and 24th. The barometer was persistently high over the southern portion of the British Islands, the Bay of Biscay, and France, while very extensive and deep areas of low pressure passed eastwards or north-eastwards across Scandinavia.

On Friday, the 4th, the barometer ranged from 28·55 inches, at Nairn, in Scotland, to 30·33 inches at Toulon. Violent storms or gales from S.W. and W. raged over the United Kingdom, and in Dublin temperature rose first to 54·8°, but fell a few hours later to 36·8°.

TABLE XII. showing the Temperature of the Air in Dublin in 1885, and the Average Temperature for the Twenty Years 1865 to 1884, inclusive.

YEAR.	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.	Year.
1865,	37.1	40.4	40.4	50.5	52.5	59.8	60.8	58.3	60.2	49.9	44.4	45.6	50.0
1866,	43.0	39.9	41.1	47.0	48.9	56.8	59.8	57.2	51.9	50.5	45.4	44.4	48.8

N.B.—The temperatures given above were deduced from the maximal and minimal readings of the Thermometer by Kaemtz's Formula—
viz., $\text{min.} + \left\{ \frac{\text{max.} - \text{min.}}{41} \right\} = \text{Mean Temperature.}$

I have the honour to be

Your Excellency's faithful servant,

THOS. W. GRIMSHAW,
Registrar-General.

GENERAL REGISTER OFFICE,
CHARLEMONT HOUSE,
Dublin, 15th June, 1886.

ABSTRACT OF METEOROLOGICAL OBSERVATIONS taken at 40, Fitzwilliam-square, West, Dublin, during the Year 1885, by J. W. MOORE, Esq., M.D., Univ. Dub., F.R.C.S.P., F.R.Met.Soc.

Long. 6° 15' W.; Lat. 53° 20' N.; Height above Mean Sea Level, 56 feet; Thermometers, 4 feet above ground; Rain Gauge, 3 feet above ground.

MARRIAGES, BIRTHS, and DEATHS registered in the Year 1885.

I.—PROVINCE OF LEINSTER.—MARRIAGES, BIRTHS, AND DEATHS, 1885.

SUPERINTENDENT REGISTRARS' DISTRICTS, ARRANGED BY COUNTIES.*

Wherever the minus sign (—) is prefixed to the number given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, less than the Deaths to the extent stated.

No.	SUPERINTENDENT REGISTRARS' DISTRICTS.	AREA in Statute Acres.	Popula- tion, 1881.	TOTAL			BIRTHS.				DEATHS.		Excess of Births over Deaths.
				MARRIAGES.	BIRTHS.	DEATHS.	Including Illegitimate Births.		Illegitimate Births.		Males.	Females.	
							Males.	Females.	Males.	Females.

NOTE.—The Registrars' Districts are subdivisions of the Unions or Superintendent Registrars' Districts, and are identical with the Dispensary Districts of the same names, except in a few instances.
The letter W. denotes that the Registrar's District contains within its limits the Workhouse belonging to the Union or Superintendent Registrar's District.
Wherever the minus sign (-) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births instead of exceeding the deaths, were, in fact, less than the deaths to the extent stated.

BIRTHS AND DEATHS Registered in the Year 1885—REGISTRARS' DISTRICTS, arranged by COUNTIES and SUPERINTENDENT REGISTRARS' DISTRICTS—continued.

NOTE.—This table has been constructed for the years 1801 to 1831—By adopting the rates of increase of the male and female population between 1821 and 1831, as shown by the Irish Census Reports of 1831—the first complete Census of Ireland having been taken in 1821.

1832 to 1841—By adopting the rate of increase between the population of 1831 and 1841, according to the Irish Census Report of 1841.

1842 to 1846—By taking the English average birth-rate of 1 in 31, and death-rate of 1 in 45, and deducting the annual emigration from Ireland according to the returns received from the Emigration Commissioners in England.

1847 to 1851—The English birth-rate, as above, was used, deducting the number of deaths and the number of emigrants in each year, as given in the Irish Census Reports of 1851; an allowance, proportioned to the number of recorded deaths and the number of emigrants being made in each year for the excess of the number thus arrived at for 1851 over the actual population according to the Census of that year.

1852 to 1871—The English birth and death rates, as above, were used, deducting the number of emigrants according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over Census numbers for 1861 and 1871 as explained for the last period.

1872-85—By adding the Births registered in each year to the estimated population for the previous year, deducting the deaths and emigration, and adjusting the results for the years 1872-81, to allow for the discrepancy between the number thus arrived at for 1881 and the estimate based on the Census, taken on the 3rd of April in that year.
