SHÉAMAS DE BÚRCA, AIRE UM RIALTAS ÁITIÚIL.

A CHARA,

I have the honour of submitting my Annual Report on the Marriages, Births and Deaths registered in Saorstát Éireann. during the year 1923.

In the reports for former years, commencing with that for 1864 (the first year of the application of the Act for the compulsory registration of Marriages, Births and Deaths in Ireland) the births and deaths were referred to the areas in which these events occurred or, in other words, to the localities in which they were registered, no correction having been made for the births and deaths occurring in institutions.

This Report for the first time contains the figures so corrected for the different classes of area, viz., the births and deaths registered in Saorstát Éireann as having occurred in institutions and elsewhere during the year 1923, have been, as far as possible, assigned to the areas to which they belonged—the births and deaths of infants were referred to the areas which contained the normal residences of the mothers and all other deaths to the areas comprising the normal residences of the deceased persons.

A notable advance has therefore been made in this Report in the direction of more valuable statistics for administrative areas.

As regards the information now supplied for the latter, it should be noted that more details are given for administrative counties and county boroughs than has hitherto obtained, the deaths for causes (International "Short List" of Diseases) being given by sexes and ages and by institutions, the number of uncertified deaths being also shown for the several causes of death.

While the presentation of the figures for superintendent registrars' districts in connection with causes of death has not been continued in this Report, particulars regarding urban and rural areas in each administrative county are now given as well as summaries for each province. This new information will, it is thought, be more useful for statistical and administrative purposes, than that furnished heretofore.

The abstract giving the total numbers of marriages, births and deaths by superintendent registrars' districts is, however, retained. This abstract, as regards births and deaths, shows the total numbers registered in each province, county, county borough, and superintendent registrars' district, and supplies also the net result of the correction for births (distinguishing illegitimate births) and deaths in institutions, with the number transferred from the area of registration and the number transferred to the area of normal residence from other registration areas.

The information regarding infant mortality in Saorstát Éireann has been extended by the sub-division of the age period, under one month, into the following periods:—under 24 hours, one to 7 days, 7 to 14 days, 14 to 21 days, and 21 days and under one month. Fuller particulars are also supplied by causes and ages, in relation to urban and rural areas.

For the first time particulars are given showing the mortality among illegitimate infants under one year of age. These particulars have reference to causes of death, ages at death and the county or county borough in which the deaths were registered.

Although the figures as presented in this report are of greater value than those supplied hitherto in relation to administrative areas, yet on account of the differences in the age and sex constitution of the several areas, allowances for the purposes of their comparison should be made in the mortality rates for these variations in their age and sex distribution. As, however, estimates of the number of inhabitants at the different ages at a date so far removed from that of the latest enumeration (Census of 1911) cannot be otherwise than mere approximations, it has been decided to postpone the operation of correcting for age and sex constitution until the requisite information in relation to the existing population shall have been ascertained.

GENERAL SUMMARY.

The main features in connection with the vital statistics of Saorstát Éireann in 1923 as compared with 1922 are increased marriage, birth and emigration rates and a reduced death rate.

The marriages registered during the year under review numbered 15,632 being 491 above the number in 1922, but 8 under the average for the ten years 1913-22.

There were 61,690 births being equal to 19.49 per 1,000 of the estimated population, as compared with a rate of 18.62 per 1,000 for 1922 and 20.34 per 1,000 for the ten years 1913-22. The number for 1923 shows an increase of 2,841 as compared with that for the preceding year.

Judging by the mortality from all causes, the year 1923 was the healthiest known in this country. The number of deaths was 42,217 or 13.34 per 1,000 of the population, the rate for 1922 being 14.10 per 1,000 and the average for the ten years (1913-22) 15.89 per 1,000.

Tuberculosis caused 4,468 deaths equivalent to 1.41 per 1,000 of the population, as against 4,614 deaths and a rate of 1.46 per 1,000 in 1922. The mortality from tuberculosis in 1923 is lower than that for any other year for which there is a record, and it is 33.5 per cent. less than that for the year 1917.

The number of deaths from cancer in 1923, viz., 2,730 with its rate of 0.86 per 1,000, is higher than that for any year of the preceding decennium. The number shows an increase of 207 as compared with that for 1922 and of 119 in comparison with the average for that decennium.

To heart diseases 4,643 deaths were attributed. This number, which is slightly higher than that recorded for 1922, is equivalent to a rate of 1.47 per 1,000 of the population.

A low mortality from bronchitis and pneumonia characterised the year 1923. Deaths from the former numbered 2,866 or 1,174 under the average (4,040) for the ten years 1913-22. Pneumonia caused 2,102 deaths, being 721 under the average (2,823).

The infant mortality in 1923 for the entire area was 66 per 1,000 births (a record low infant death rate). The rate for rural areas was 50 per 1,000 and for urban areas 99 per 1,000 births.

TABLE I.—Showing for each of the years 1913-23 the estimated Population* of SAORSTAT ÉIREANN area; the number of MARRIAGES, BIRTHS and DEATHS registered, with the rates per 1,000 of the estimated Population represented thereby; and the averages for the ten years, 1913-1922; also particulars relating to Northern Ireland for the year 1923.

EMIGRATION.

From returns kindly furnished by the British Board of Trade and the Ministry of Industry and Commerce (Department of Statistics) Saorstát Éireann, it is estimated that the number of emigrants from Saorstát Éireann to "places out of Europe and not within the Mediterranean Sea" during the year 1923 was 20,570, including 16,700 bound for the United States, 2,600 for British North America, 700 for Australia, 200 for New Zealand, 100 for British South Africa, 70 for India, and 200 for other countries.

The estimated number of emigrants in 1922 was 15,000.

* See page 73.

MARRIAGES.

During the year 1923 the marriages registered in Saorstát Éireann numbered 15,632, being equivalent to a rate of 4.94 per 1,000 of the estimated population; this rate is 0.15 above that for the previous year, but 0.01 under the average for the ten years, 1913-22.

Of the 15,632 marriages 14,576 were of Roman Catholics, as compared with 13,915 in 1922, the remaining marriages numbering 1,056 in 1923, as against 1,226 in 1922. Included in the 1,056 marriages are 752 celebrated according to the rites and ceremonies of the Church of Ireland, as against 856 in 1922; 154 as compared with the same number in 1922, were in Presbyterian Meeting-houses; 53 as against 78 in 1922 in "Registered Buildings" belonging to various religious denominations; 83 by civil contract in the Registrars' offices, as against 127 in 1922; and 9 as compared with 11 in 1922, were according to the Jewish rites.

The rate per 1,000 of the estimated Roman Catholic population represented by the number of marriages of Roman Catholics was 5.14, or 0.13 above the corresponding average rate for the preceding ten years, and the rate for other Marriages was equivalent to 3.20 per 1,000 of all persons other than Roman Catholics in the population, this rate being 1.21 below the corresponding average rate for the ten years, 1913-22.

TABLE II.—MARRIAGES registered in Saorstát Éireann area in 1923, and in each of the previous ten years, according to the MODES OF CELEBRATION; with the rate per 1,000 of the population represented thereby.

1921	970	180	88	155	—	9	1,402	13,700	15,102	4.17	4.75	4.69
1922	856	154	78	127	—	11	1,226	13,915	15,141	3.73	4.92	4.79
Yearly Average 1913-1922.	1,034	194	84	127	2	10	1,451	14,189	15,640	4.41	5.01	4.95
1923	752	154	53	83	5	9	1,056	14,576	15,632	3.20	5.14	4.94

It will be found from the figures given in the Abstract of Marriages, pages 8-9, that 90.7 per cent of the total marriages were those of bachelors and spinsters; that 5.7 per cent. were those of widowers and spinsters; that 2.5 per cent. were marriages of bachelors and widows; and that those of widowers and widows formed 1.1 per cent. of the total marriages. Thus, of the men married 6.8 per cent. were widowers, and of the women 3.6 per cent. were widows, and in 9 instances in every 100 marriages, one or both of the contracting parties had been in the married state before.

A rough test of the progress of elementary education in Saorstát Éireann is afforded by the signatures of the contracting parties in the marriage registers or certificates. In the year 1923 there were 15,221 or 97.4 per cent. of the husbands, and 15,415, or 98.6 per cent., of the wives, who wrote their names, and the remainder signed by "mark," as against 14,106, or 93.9 per cent. of the husbands, and 14,485 or 96.4 per cent. of the wives in the year 1913.

Table XV supplies the rates per 1,000 of the population represented by marriages in the provinces, counties and county boroughs.

BIRTHS.

The number of births registered in Saorstát Éireann during the year 1923 was 61,690 (boys 31,808 and girls 29,882) equivalent to 19.5 per 1,000 of the estimated population, or 0.8 per 1,000 under the average of the ten years, 1913-22.

The rate represented by the births registered in Northern Ireland was 23·5 per 1,000 of the estimated population ; in England and Wales, 19·7 ; and in Scotland, 22·8.

For the combined county boroughs and urban districts in Saorstát Éireann, the rate per 1,000 of the population of these areas during the year 1923 was 24·6 and for all rural districts it was 17·8 (Table XVI).

In 1923 the proportion of male infants born alive in Saorstát Éireann to every 1,000 females was 1,065, as in 1922 ; in 1921 it was 1,056 ; in 1920 it was 1,067 ; in 1919 it was 1,069 ; and in 1918 the proportion was 1,040 males to every 1,000 females.

Of the 61,690 births registered during the year 60,066 or 97·4 per cent. were legitimate, and 1,624, or 2·6 per cent. were illegitimate, the proportions being the same as those for each of the two preceding years.

This illegitimacy rate is slightly higher than the average (2·5) for the five years, 1918-22.

For the province of Leinster illegitimacy in 1923 amounted to 3·3 per cent. of the total number of births for that province ; Munster 2·5 per cent. ; Connaught, 1·3 per cent., and Ulster (part of) 2·5 per cent.

It may be noted here that these rates are not strictly comparable with those given in the reports for previous years, the latter having reference to the number of births registered in these areas, no correction having been made for births in institutions, as in 1923.

The male children born in wedlock numbered 30,960 and the female 29,106 or 1,064 of the former to every 1,000 of the latter, and of the illegitimate children 848 were males and 776 females, or 1,093 boys to every 1,000 girls.

It should be stated that the illegitimate birth-rate for Saorstát Éireann compares favourably with that for most other countries.

For the province of Leinster the birth-rate was 21·8 per 1,000 of the population (Census 1911) ; for Munster 19·1 ; for Connaught 17·0, and for Ulster (part of) 18·6.

The following statement shows the total number of infants, by sexes, whose births were registered during each quarter of 1923 :—

—	1st Quarter.	2nd Quarter.	3rd Quarter.	4th Quarter.	Total.
Males	7,845	8,418	7,928	7,617	31,808
Females	7,356	7,846	7,530	7,150	29,882
Total	15,201	16,264	15,458	14,767	61,690

Of the total births 51·0 per cent. were registered in the first six months (181 days) and 49·0 per cent. in the second six months (184 days).

MULTIPLE BIRTHS.

The number of twin births registered in Saorstát Éireann during the year 1923 was 761 and the number of triplet births 7. The twin births were 1·23 per cent. of the total births, 1·26 of the single births and 1·25 per cent. of the total mothers. These proportions are the same as those which obtained in the preceding year.

DEATHS.

The deaths registered in Saorstát Éireann during the year 1923 numbered 42,217, affording a rate of 13·34 per 1,000 of the estimated population. The deaths of males amounted to 21,561, or 13·50 per 1,000 of the estimated number of males in the population, the deaths of females numbering 20,656, equivalent to 13·17 per 1,000 of the estimated female population.

The mortality from all causes in 1923 is 0·76 per 1,000 below that for 1922, and 2·55 per 1,000 below the average for the ten years 1913-22.

The death rate from all causes for Northern Ireland was 14·7 per 1,000, for England and Wales, 11·6 per 1,000 and for Scotland, 12·9 per 1,000.

Table XV., gives the rates from all causes for Saorstát Éireann by provinces, counties and county boroughs.

From this it will be seen that the rate for the province of Leinster is 14·73 per 1,000 of the population of the province, for Munster 12·77 per 1,000, for Connaught 11·96 per 1,000 and for Ulster (part of) 13·81 per 1,000.

The rates for counties and county boroughs varied from 17·84 for Limerick county borough to 10·40 for Kerry county.

For urban areas (county boroughs and urban districts) the mortality from all causes in 1923 was 15·50 per 1,000 of the population and for the rural districts 12·69 per 1,000 (Table XVI.).

The following statement shows the number of deaths of persons by sexes registered during each quarter of the year 1923.

—	1st Quarter.	2nd Quarter.	3rd Quarter.	4th Quarter.	Total.
Males ...	6,050	5,815	4,494	5,202	21,561
Females ...	5,790	5,548	4,240	5,078	20,656
Total ...	11,840	11,363	8,734	10,280	42,217

Of the total deaths 23,203, or 55·0 per cent., were recorded during the first six months and 19,014, or 45·0 per cent. in the second six months.

The annual rate per 1,000 of the population represented by deaths registered in the first quarter of the year was 15·0 ; in the second quarter, 14·4 ; in the third, 11·0 ; and in the fourth 13·0, as compared with 19·1, 16·9, 12·7 and 14·9, respectively, for the first, second, third and fourth quarters of the ten years 1913-22.

It will be observed from the abstract on page 30 that 3,405 of the 42,217 deaths took place in infirmaries and general and special hospitals, 1,074 in mental hospitals, 5,342 in county homes and hospitals and that 32,396 occurred elsewhere. Of the total deaths, 23·3 per cent. occurred in the above-named institutions (8·1 per cent. in infirmaries and general and special hospitals, 2·5 per cent. in mental hospitals and 12·7 per cent. in county homes and hospitals) and 76·7 per cent. occurred elsewhere.

CAUSES OF DEATH

In the table which follows, the number of deaths from some of the principal diseases are shown for the years 1922 and 1923, also the averages for the ten years, 1913-1922.

CAUSES.	Number of Deaths registered			CAUSES.	Number of Deaths registered.		
	Years.		Average 10 years 1913-22		Years.		Average 10 years 1913-22
	1923.	1922.			1923.	1922.	
Enteric Fever	142	96	173	Tuberculous Disease ...	4,468	4,614	5,961
Typhus ...	19	18	29	Cancer	2,730	2,523	2,611
Measles ...	171	458	350	Heart Disease	4,643	4,609	5,025
Scarlet Fever	66	73	127	Bronchitis	2,866	3,345	4,040
Whooping-cough	454	201	432	Pneumonia	2,102	2,792	2,823
Diphtheria ...	285	401	260	Diarrhoea and Enteritis under two years of age	513	443	750
Dysentery ...	15	9	19	Puerperal Septic Diseases	135	139	134
Influenza ...	621	1,812	2,143	Other Accidents and Diseases of Pregnancy and Childbirth ...	162	194	197
Encephalitis lethargica ...	16	19	7				
Cerebro-spinal Fever ...	17	11	30				

The above table shows that the mortality from enteric fever increased from 96 in 1922 to 142 in 1923 ; whooping-cough from 201 to 454 ; cancer from 2,523 to 2,730 ; heart disease from 4,609 to 4,643 ; diarrhoea and enteritis among children from 443 to 513 ; typhus from 18 to 19 ; dysentery from 9 to 15 ; and cerebro-spinal fever from 11 to 17. From all the other causes mentioned in the table decreases are observable, notably so from measles (458 to 171), diphtheria (401 to 285), influenza (1,812 to 621), bronchitis (3,345 to 2,866) and pneumonia from 2,792 in 1922 to 2,102 in 1923.

According to Table XV., which gives the information by provinces, counties and county boroughs, deaths from the principal epidemic diseases* in Saorstát Éireann in 1923 are represented by a rate of 0·53 per 1,000 of the population, the rates varying from 2·49 per 1,000 for Limerick county borough, 1·46 per 1,000 for Waterford county borough, 1·29 per 1,000 for Dublin county borough and 0·81 per 1,000 for Cork county borough to 0·12 per 1,000 for Kilkenny county, 0·14 per 1,000 each for Longford and Sligo counties, and 0·19 for each of Ui Failighe and Leitrim counties.

Table XVI. shows that the mortality rate from this group of causes for all urban areas (county boroughs and urban districts) was 1·03 per 1,000 of the population being about 3 times the rate for rural districts—0·35 per 1,000.

* See note * on page xxx.

TABLE III.—Showing the number of Deaths from All Causes, from some of the Principal during each of the eleven years, 1913-1923, with the average Annual Number Population represented by the number of deaths from these causes, and the Northern Ireland for the year 1923.

NOTE—The Classification of Causes of Death adopted for 1921-3 is in accordance with the International as far as possible, in order to afford comparison with those for 1921-3. The numbers in brackets

YEAR. *Per cent. of total deaths.

ENTERIC FEVER.—This disease caused 142 deaths (of males 74 and of females 68) including 3 from paratyphoid fever. The 142 deaths are 46 above the number (96) recorded in 1922, but 31 below the average (173) for the ten years 1913-22. Forty appertained to urban areas and 102 to rural (see abstract commencing on page 62).

TYPHUS.—Of 19 deaths from typhus 11 were those of males and 8 of females. There is an increase of one as compared with 1922, but a decrease of 10 as compared with the average for 1913-22. Two of the 19 deaths related to urban areas and 17 to rural (one to the province of Leinster, 7 to Munster and 9 to Connaught).

SMALL-POX.—No case of this disease was reported during the year.

MEASLES.—The fatal cases of this disease numbered 171 (of males 82 and of females, 89). This number which is 287 less than the number recorded during the preceding year is less than half the average for the ten years, 1913-22, viz. 350, and with the exception of the mortality for the years 1919 and 1921, is under that for any year of this decennial period. Of the 171 deaths, 134 were those of children under 5 years of age.

SCARLET FEVER.—Deaths from this disease amounted to 66 during the year 1923, as compared with 73 in 1922 and an average 127 for the ten years ending with the latter year. Of the 66 deaths, 27 were those of males and 39 of females.

WHOOPIING-COUGH.—Deaths from whooping-cough which numbered 795 in 1920 fell to 216 in 1921 and 201 in 1922, rising to 454 (equivalent to 0.14 per 1,000 of the population) in 1923.

This number is 22 above the average (432) for the ten years 1913-22. Of the 454 deaths (of males 211 and of females 243) 428 were those of children under 5 years of age, (217) more than half of the latter being deaths of infants under one year of age.

The deaths recorded for urban areas numbered 263 and for rural areas 191, representing 0.31 and 0.08 per 1,000 of the respective populations, or about 4 urban to one rural.

Included in the 454 deaths are 132 (or about 29 per cent.) appertaining to the city of Dublin which contains about 13 per cent. of the population of Saorstát Éireann.

DIPHTHERIA.—The number of deaths from this disease (285) which is 116 under the high number (401) registered during 1922 is, however, 25 above the average (260) for the ten years 1913-22. The deaths in 1923 comprise 147 of males and 138 of females, and of the 285 deaths 126 were those of children under 5 years of age and 88 were between 5 and 10 years, so that 214, or 75 per cent. of all the deaths from diphtheria were those of children under ten years of age.

DYSENTERY.—To this cause 15 deaths were attributed, as compared with an average of 19 for the preceding ten years.

DIARRHOEA AND ENTERITIS (Children under 2 years).—The number of deaths of children attributed to this cause during the year 1923 was 513, which number is 70 above that recorded in 1922, but 237 below the average (750) for the decennium, 1913-22.

Of the 513 deaths 285 were those of males and 228 of females. The mortality for 1923 is lower than that for any year of the decennium referred to, with the exception of the mortality for 1922. The 513 deaths include 218, or 42 per cent., belonging to the county borough of Dublin.

The rate for diarrhoea and enteritis for urban areas based on the births recorded therefor was 17.4 per 1,000 and for rural areas the corresponding rate was 3.7 per 1,000.

INFLUENZA.—A comparatively low mortality from this cause characterized the year 1923, in fact it was, with the exception of the mortality for 1914, lower than that for any year of the decade ending with the year 1922. The deaths numbered 621, representing a rate of 0.19 per 1,000 of the population, as compared with 1,812 deaths and 0.57 per 1,000 in 1922. The deaths in 1923 include those of 297 males and 324

females, and of the 621 deaths 168 were returned as from influenza with pulmonary complications and 453 as from influenza without pulmonary complications. Of the 621 deaths, 496 appertained to rural areas.

ERYSIPELAS.—There were 38 deaths (20 of males and 18 of females) from this cause, as compared with 54 in 1922.

ACUTE POLIOMYELITIS.—Seven deaths were ascribed to this disease, being 4 under the number recorded in the preceding year.

ENCEPHALITIS LETHARGICA.—The fatal cases of this disease registered in 1923 numbered 16 (of males, 8 and of females, 8) as against 19 in 1922, 31 in 1921 and 17 in 1920.

CEREBRO-SPINAL FEVER.—This disease caused 17 deaths—9 of males and 8 of females—being 6 above the number for 1922, but 13 under the average for the 10 years 1913-22.

OTHER EPIDEMIC DISEASES.—There were 4 deaths from malaria, 3 deaths from mumps, and 2 from varicella.

TETANUS.—The number of deaths from this disease was 25, those of males being 19 and of females 6, as against a total of 22 in 1922.

TUBERCULOSIS.

Deaths from all forms of tuberculous disease registered in Saorstát Éireann during the year 1923 numbered 4,468, and of these 2,222 were deaths of males and 2,246 of females. The former number is equivalent to a rate of 1.41 per 1,000 of the total population, the number of deaths of males affording a rate of 1.39 per 1,000 of the estimated number of males, and the deaths of females 1.43 per 1,000 of the estimated number of females in the population, as will be seen from the following Table.

The corresponding rates for all deaths from tuberculosis in Northern Ireland was 1.59 per 1,000 of the estimated population, in England and Wales 1.06 per 1,000, and in Scotland 1.17 per 1,000.

TABLE IV.—Showing by sexes the mortality from tuberculosis during each of the years 1913-23.

YEAR.	MALES.		FEMALES		TOTAL		Annual Increase.		Annual Decrease.	
	Number of Deaths.	Rate per 1,000 of the Male population.	Number of Deaths.	Rate per 1,000 of the Female population.	Number of Deaths.	Rate per 1,000 of the population.	Number.	Per cent.	Number.	Per cent.
1913	3,321	2.10	3,195	2.07	6,516	2.08	—	—	—	—
1914	3,329	2.10	3,015	1.95	6,344	2.03	—	—	172	2.6
1915	3,640	2.31	3,085	1.99	6,725	2.16	381	6.0	—	—
1916	3,394	2.15	3,077	1.98	6,471	2.07	—	—	254	3.8
1917	3,378	2.13	3,288	2.11	6,666	2.12	195	3.0	—	—
1918	3,244	2.03	3,248	2.09	6,492	2.06	—	—	174	2.6
1919	2,846	1.73	2,993	1.92	5,839	1.82	—	—	653	10.1
1920	2,516	1.52	2,606	1.67	5,122	1.59	—	—	717	12.3

1922	2,316	1.45	2,298	1.47	4,614	1.46	—	—	210	4.4
Average, 1913-1922,	3,032	1.89	2,929	1.88	5,961	1.89	—	—	* 1,902	29.2
1923	2,222	1.39	2,246	1.43	4,468	1.41	—	—	146	3.2

* Decrease in 1922 as compared with 1913.

It will be observed from this table that a steady and continuous reduction in the mortality from tuberculosis has taken place in the Saorstát Éireann area year by year beginning with the record for 1918, and it will be found that the mortality in 1923 as compared with that for 1917 shows a reduction of no less than 33.5 per cent., the fall in the mortality among males being equivalent to 35 per cent. and among females to 32 per cent.

Of the 4,468 deaths, 3,524 (of males 1,727 and of females 1,797) were caused by tuberculosis of the respiratory system, 277 (of males 150 and of females 127) by tuberculosis of the meninges, 235 (of males 114 and of females 121) of the intestines and peritoneum, 82 (of males 46, and of females 36) of the vertebral column, 59 (of males 37 and of females 22) of the joints, 101 (of males 42 and of females 59) from tuberculosis of other organs, and 190 (of males 106 and of females 84) were caused by disseminated tuberculosis.

The abstracts commencing on page 30 give the details regarding deaths from tuberculosis, by provinces, counties, county boroughs, and urban and rural districts, while Tables XV. and XVI. supply the rates per 1,000 of the population for these areas.

It will be seen from Table XV that the highest tuberculosis mortality for county or county borough areas related to the county boroughs—Cork (2·32 per 1,000), Dublin (2·22), Limerick (2·00) and Waterford (1·86 per 1,000), the counties having the lowest rates in 1923 being Leitrim (0·77), Longford (0·84), Cavan (0·93) and Monaghan (0·97).

TABLE V.—Showing the rates per 1,000 of the estimated population represented by deaths from ALL FORMS OF TUBERCULOUS DISEASE at the undermentioned age-periods registered during the year 1923.

Sexes.	RATE PER 1,000 OF THE ESTIMATED POPULATION AT AGES											
	All Ages	Under 5 years	5-10	10-15	15-20	20-25	25-35	35-45	45-55	55-65	65-75	75 & upwards
Males	1·39	0·93	0·49	0·61	1·47	2·19	2·09	1·99	1·95	1·59	0·43	0·07
Females	1·43	0·73	0·44	0·98	2·33	2·52	2·17	1·92	1·57	1·14	0·38	0·22
Both Sexes	1·41	0·83	0·46	0·79	1·89	2·35	2·13	1·95	1·76	1·36	0·40	0·15

Owing to the length of time that has elapsed since the latest enumeration (1911) of the population and on which the estimated population at each age period is based it cannot be claimed for the above rates that they are trustworthy. They are presented with the object of giving a rough view of the trend of mortality at the different ages.

SYPHILIS &c.—Twenty-eight deaths (17 of males and 11 of females) were ascribed to syphilis as compared with 29 in 1922. Of the 28 deaths, 17 were those of infants under one year of age.

Five deaths of males and 2 of females were ascribed to other venereal affections.

There were 36 deaths (of males 34 and of females 2) from general paralysis of the insane; 10 deaths (of males 9 and of females one) from locomotor ataxy, and 25 deaths (of males 21 and of females 4) from aneurysm.

PURULENT INFECTION, SEPTICÆMIA.—Under this heading 92 deaths were returned, 52 being those of males and 40 of females, as against 103 in the preceding year.

OTHER INFECTIOUS DISEASES.—Two deaths from mycosis and one from anthrax were recorded.

CANCER.—During the year 1923, the number of deaths registered as from cancer (including carcinoma, sarcoma, cancer, malignant disease) amounted to 2,730, as against 2,523 in 1922 and an average of 2,611 for the ten years, 1913-22, thus showing an increase of 207 as compared with the number of deaths in 1922 and of 119 as compared with the average for the ten years ending 1922. Thus the mortality in 1923 is more than 8 per cent. higher than that for 1922, the mortality for that year and for the two preceding years being practically the same, as may be seen from Table III.

The rate per 1,000 of the population for all deaths from cancer in 1923 was 0·86; the rate for males (1,457) was 0·91 per 1,000 of the male population and for females (1,273 deaths) 0·81 per 1,000 of the estimated number of females in the population. Comparing this mortality with that obtaining in 1922 it would appear that there is an increase of about 9 per cent. for males and about 7 per cent. for females.

Table VI. shows the number of deaths from cancer, by sexes, ages and parts affected, also the mortality rates by sexes and age-periods (with reference to the latter see remarks in connection with the mortality from tuberculosis by age-periods).

TUMOURS.—Only tumours definitely stated to have been either non-malignant, or as to which further information was not obtainable, as the result of special enquiries regarding their nature, are included under this heading.

There were 27 deaths from cerebral tumour (of males 20 and of females 7) ; 19 from tumours of the ovary ; 19, from tumours of the uterus ; and 44 from tumours of other or unstated sites (22 of males and 22 of females).

The latter included 14 returned as from tumour of the abdomen, 4 of intestine, 4 of bladder and 4 of mediastinum, 3 of liver, 2 of jaw, 2 of larynx and 11 from tumours of other sites unstated.

RHEUMATISM.—There were 101 deaths (51 of males and 50 of females) from rheumatic fever ; 307 deaths (140 of males and 167 of females) from chronic rheumatism, osteo-arthritis and gout.

DIABETES.—To this cause 224 deaths were attributed, 116 being deaths of males and 108 of females. The total deaths are 15 under the number (239) for the year 1922 and 16 under the average for the ten years 1913-22.

ALCOHOLISM.—Twenty-one deaths were ascribed to alcoholism, and of these 20 were those of males. Cirrhosis of the liver caused 94 deaths, 72 being those of males and 22 of females. All except 2 males were aged 25 years and upwards.

OTHER GENERAL DISEASES.—Among these were 31 deaths from rickets, 177 from pernicious anæmia, 60 from other anæmias and chlorosis, 18 (of males 3 and of females 15) from exophthalmic goitre, 19 from other diseases of the thyroid gland, 14 (11 of males and 3 of females) from diseases of the adrenals, 7 from diseases of the spleen, 28 from leukæmia, 17 from lymphadenoma (Hodgkins' disease) and 4 from chronic poisoning by mineral substances.

MENINGITIS AND ENCEPHALITIS.—Deaths from meningitis (not returned as cerebro-spinal or tuberculous) amounted to 309 (deaths of males numbering 163 and of females, 146) as compared with 310, 168 and 142, respectively, in 1922.

The number of deaths from encephalitis (not returned as encephalitis lethargica) was 38, as against 35 in 1922.

CEREBRAL HÆMORRHAGE.—The number of deaths returned under this heading was 1,365 comprising 623 deaths of males and 742 of females. The latter figures include the deaths of 30 males and 45 females from cerebral thrombosis and embolism.

The 1,365 deaths are 62 above the number recorded in 1922, but 34 under the average for the ten years, 1913-22.

EPILEPSY.—There were 174 deaths (of males 99 and of females 75) from epilepsy, as compared with 148 in the preceding year.

CONVULSIONS.—The number of deaths ascribed to convulsions was 609 (of males 351 and of females 258) and of the 609 deaths 504, or 82·8 per cent. were those of infants under one year of age, the 504 deaths constituting 12·3 per cent. of the deaths from all causes of infants under one year of age registered in Saorstát Éireann during the year 1923.

HEART DISEASE.—To this group 4,643 deaths (of males 2,283 and of females 2,360) were assigned, equivalent to a rate of 1·47 per 1,000 of the estimated population, and contributing 11 per cent. to the mortality from all causes. As compared with the number in 1922 viz., 4,609, the number of deaths from heart disease during the year under review is 34 more and with the average (5,025) for the ten years, 1913-22 it is 382 fewer.

Of the 4,643 deaths, 22, were ascribed to pericarditis, 94 to acute endocarditis and myocarditis, 72 to angina pectoris, and 4,455 to other diseases of the heart.

ARTERIAL SCLEROSIS.—Deaths from arterial sclerosis of which 90 were those of males and 60 females, numbered 150. This number is slightly higher than that recorded for 1922, viz. 147.

BRONCHITIS.—The mortality from bronchitis in the year 1923 is the lowest for this cause known. The deaths numbered 2,866 (of males, 1,347 and of females, 1,519) being equivalent to a rate of 0·91 per 1,000 of the population, or 6·8 per cent. of the total number of deaths from all causes. The number of deaths (2,866) is 479 under the number for 1922, and 1,174 under the average for the ten years, 1913-22. Of the 2,866 deaths, 336 were returned as from acute bronchitis, 578 as from chronic bronchitis and 1,952 as from bronchitis (not otherwise defined).

PNEUMONIA.—Of 2,102 deaths from pneumonia (all forms), affording a rate of 0·66 per 1,000 of the population, 791 were from broncho-pneumonia, 218 from lobar pneumonia, and 1,093 from pneumonia (not otherwise defined).

The 2,102 deaths include 1,194 deaths of males and 908 of females.

As in the case of bronchitis, the mortality from pneumonia in 1923 is the lowest known for this disease.

PLEURISY ; EMPYEMA.—The number of deaths classed to pleurisy, including deaths from empyema regarding which the originating cause other than pleurisy could not be ascertained, was 117, the males numbering 63 and the females, 54.

As the result of inquiries into the causes of 11 deaths as from empyema registered in Saorstát Éireann during the year 1923, 4 were assigned to pneumonia (3 to lobar and one to pneumonia not otherwise defined,) 5 to tuberculosis, one to ulcer of duodenum and one to biliary calculi.

ULCER OF THE STOMACH AND DUODENUM.—To these causes, 267 deaths were attributed, 169 being those of males and 98 of females. The total number is 41 above the average (226) for the ten years, 1913-22.

APPENDICITIS AND TYPHLITIS.—The deaths so classified numbered 164 (of males 98 and of females 66) being 27 above the average (137) for the ten years preceding.

CIRRHOSIS OF THE LIVER.—Deaths from this cause, viz. 94 (of males 72 and of females 22) are below those recorded during any of the preceding ten years and are 64 under the average for that period.

ACUTE AND CHRONIC NEPHRITIS.—The number of deaths from acute nephritis was 146 (85 of males and 61 of females) and from chronic nephritis 897 (532 of males and 365 of females). The total number of deaths from the acute and chronic disease was 1,043, which number is 47 above that for 1922, but 83 below the average for the ten years 1913-22.

PREGNANCY AND CHILDBIRTH.

The mortality of women during pregnancy and childbirth is classified under three headings namely, (1) septic conditions, (2) intrinsic accidents of pregnancy and childbirth and (3) disease or cause associated with pregnancy and childbirth. To the first group 135 deaths were attributed in the year 1923, to the second 162, and to the third 31; altogether the deaths in Saorstát Éireann of childbearing women numbered 328. This number, which is 42 below that for the year 1922 represents a rate of 5·32 per 1,000 of the total births registered as compared with 6·29 in the year 1922, and with 5·76 per 1,000, the average rate for the decade, 1913-22.

Table VIII shows that the mortality from puerperal septic diseases fell from 139 in the year 1922 to 135 in 1923, and from accidents of pregnancy and childbirth from 194 in 1922 to 162 in 1923. The deaths of women from causes associated with pregnancy and childbirth which were 37 in the year 1922 fell to 31 in the year under review.

Tables XV and XVI. give the rates per 1,000 births for (1) and (2) by provinces counties and county boroughs and groups of urban and rural areas.

TABLE VII.—Showing the number of deaths of women in 1923 definitely returned as either caused by or associated with PREGNANCY or CHILDBEARING*.

CAUSES OF DEATH.	ALL AGES.	AGES.

1923... ..	135	2.19	162	2.63	297	4.82	31	0.50	328	5.32

VIOLENCE.

Deaths caused by violence, as registered in Saorstát Éireann during the year 1923 amounted to 1,389, a number equivalent to 0.44 per 1,000 of the estimated population, which number is 42 less than that recorded for 1922, but 39 above the average (1,350) for the ten years 1913-22.

Of the 1,389 deaths 74 were classed to suicide, 328 to homicide, 58 to execution, leaving 929 to other deaths by violence, the majority of which were definitely stated to be accidental.

The suicidal cases comprise the deaths of 50 males and 24 females.

Of the 328 homicidal cases, 309 were deaths of males (including 3 infants under one year old) and 19 of females (including 6 infants under one year old). In 290 instances (282 of males and 8 of females) the deaths referred to homicide were caused by firearms, and include the deaths of 82 soldiers.

The deaths other than those classed to homicide, suicide or execution, include 10 (8 of males and 2 of females) caused by poisons or poisonous gases, 170 (64 of males and 106 of females) by burns or scalds not including 16 deaths (11 of males and 5 of females) caused in conflagrations. Of the 170 deaths caused by burns or scalds, 95 were those of children under 5 years of age.

There were 161 deaths (of males 136 and of females 25) from accidental drowning, 120 deaths caused by injuries due to firearms, of which 111 were those of males and 9 of females, 50 of the former being deaths of soldiers; and there were 121 deaths due to injuries caused by crushing (98 of males and 23 of females), including 55 (males, 45 and females, 10), as compared with 44 in 1922, by motor driven vehicles.

Of the 10 accidental deaths attributed to poisons or poisonous gases, 2 were caused by each of lysol, belladonna, and food, and one each by strychnine, sulphuric acid, carbolic acid, and mercurial chloride.

Of 8 suicidal deaths by poisoning, 2 were stated to have been caused by carbolic acid, 2 by arsenic, and one each by sheep dip, strychnine, poisonous gas and corrosive poison.

UNCERTIFIED CAUSES.

Among the 42,217 deaths registered, 11,417 were not certified by medical practitioners nor were inquests held into their causes. They constitute 27.0 per cent. of the total mortality, as compared with 26.4 per cent. in 1922 and an average of 26.4 for the ten years, 1913-22. The number of uncertified deaths in urban areas in 1923 was 4.8 per cent. of the total number of deaths registered therein, the corresponding percentage for rural areas being 37.0.

INQUESTS.

From returns furnished by the registrars it would appear that the number of inquests during the year 1923 was 827, or one inquest for every 51 deaths registered.

AGES AT DEATH.

The following statement shows by sexes, and certain age-periods, the rates per 1,000 of the estimated population represented by deaths from all causes, in Saorstát Éireann, 1923. (See remarks respecting age mortality from tuberculosis page xvi).

Sexes.	MORTALITY BY AGES AT DEATH PER 1,000 OF THE ESTIMATED POPULATION AT THESE AGES.												All ages.
	Under 5 years.	5--	10--	15--	20--	25--	35--	45--	55--	65--	75--	85 yrs. and upwds.	
Males	19.61	2.46	2.12	3.48	4.83	4.83	6.71	12.81	24.92	33.74	94.53	241.87	13.34
Females	21.20	2.49	1.86	3.08	5.42	5.18	6.41	13.73	26.27	36.45	94.89	247.88	13.50
Persons	17.98	2.42	2.39	3.90	4.19	4.91	7.03	11.86	23.61	31.42	94.18	236.46	13.17

Of the 42,217 deaths at all ages 6,071, or 14.4 per cent., were deaths of children under 5 years of age, including 3,320 deaths of males, or 15.4 per cent. of the male mortality at all ages, and 2,751 deaths of females, or 13.3 per cent. of the total number of deaths of females.

The deaths of 18,769 persons aged 65 years or upwards were registered during the year 1923, constituting 44.5 per cent. of the total number of deaths at all ages, and include 9,227 of males, or 42.8 per cent. of the total deaths of males, and 9,542 of females, or 46.2 per cent. of the deaths of females at all ages.

Among the deaths of persons at these ages 15,462, or 36.6 per cent. of the total deaths, were 70 years of age or over.

Deaths of persons aged 95 years or upwards numbered 304 (of males 150 and of females 154) and they include 63 (males 28 and females 35) whose ages at death were returned as 100 years or upwards.

The ages in detail of the persons whose deaths were registered in the year 1923 are given in the Abstracts commencing with page 10.

INFANT MORTALITY.

The number of deaths of infants under one year of age registered in Saorstát Éireann during the year 1923 was 4,098, equivalent to a rate of 66 per 1,000 births, as compared with 69 per 1,000 in 1922 and an average of 81 for the ten years 1913-22.

The deaths of male infants numbered 2,320, being equal to 73 per 1,000 births of males and the deaths of female infants 1,778, or 60 per 1,000 births of females, the corresponding rates for 1922 being 78 and 60 respectively.

For Northern Ireland the infant mortality in 1923 was 76 per 1,000 births, for England and Wales, the rate was 69 and for Scotland 79 per 1,000 births.

From Table X. which gives the infant mortality rates for Saorstát Éireann, by sexes, ages and causes it will be seen that atrophy, debility, marasmus (18.75 per 1,000) convulsions (8.18), diarrhoea and enteritis (7.17) premature birth (5.92) bronchitis (5.12) and pneumonia (5.15) in the aggregate, are equivalent to 50.29 per 1,000 births, or about 76 per cent. of the total infant mortality.

Of the deaths of infants, 37.6 per cent. were under one month old, 11.8 per cent. between one and 2 months; 9.4 per cent. between 2 and 3 months; 17.8 per cent. were aged 3 and under 6 months and 23.4 in every 100 were 6 and under 12 months old.

Urban and Rural Mortality.

There were 2,063 deaths of infants recorded for urban areas equivalent to 99 per 1,000 births, the number of such deaths in rural areas being 2,035, or 50 per 1,000 births. Thus the mortality in urban areas is nearly twice that in rural areas.

A reference to Table XI. shows that, although the mortality in rural districts is low, the rate for urban areas of 10,000 inhabitants and upwards is high, viz., 106 per 1,000 births. The urban areas which contribute to this result are:—Dublin Registration Area, including Dublin county borough (125) with a rate of 118, Cork county borough (74), Limerick county borough (122), Waterford county borough (88) and the urban districts of Galway (85), Dundalk (90), Drogheda (79), Wexford (89), Sligo (65), Kilkenny (73), Tralee (61) and Clonmel (48).

Deaths of infants in 1923, in towns of less than 10,000 inhabitants were equivalent to a rate of 74 per 1,000 births.

The following statement gives the infant mortality for each sex for urban and rural areas:—

Statement showing the INFANT MORTALITY per 1,000 Births, by sexes, and at different periods of life in 1923, in relation to urban and rural areas.

Ages.	SAORSTÁT ÉIREANN.						All Urban Areas.			All Rural Districts.

Under one year	105.77	117.85	93.05	52.19	56.80	47.27	99.12	108.21	89.37	49.78	54.89	44.37

The rate for deaths of infants under one year old for Belfast in 1923 was 101 per 1,000 births; for Londonderry 77; for London, 61; for Liverpool, 100; for Edinburgh, 82; and for Glasgow, 90.

Table XI. shows that the high rate for Dublin is due to high mortality for the majority of the causes given in the table, notably from diarrhoea and enteritis, pneumonia and whooping cough, as compared with the mortality for the urban areas in the aggregate.

The high mortality from measles, whooping-cough, convulsions and bronchitis for Limerick county borough are the principal features in connection with its high infant mortality rate for 1923.

In connection with the ages at death, as disclosed by Table XII., the marked difference in the mortality in urban and rural areas at each age period is shown and especially at one month old and upwards.

The following statement shows the proportion per cent. of the total mortality of infants for urban and rural areas at the different ages:—

Areas	Under 24 hours	1-7 days.	7-14 days	14-21 days	21 days and under 1 mth.	Under 1 mth.	1-2 mths.	2-3 mths.	3-6 mths.	6-12 mths.	Under one year
Urban Areas ...	7.2	9.6	5.2	4.7	4.7	31.4	12.8	10.1	19.4	26.3	100
Rural Areas ...	10.3	15.4	7.5	4.9	5.8	43.9	10.8	8.7	16.1	20.5	100
Saorstát Éireann (Urban and Rural)	8.7	12.5	6.3	4.8	5.3	37.6	11.8	9.4	17.8	23.4	100

The striking feature of the above statement, apart from the favourable position of rural areas as regards the mortality at each age-period from one month and upwards, is the comparatively high frequency for these areas in relation to ages under one month, and this is especially the case in connection with the deaths of infants under 7 days old. Seeing that more than 53 per cent. of the rural deaths of infants under 7 days old (in contrast with 28 per cent. of the urban deaths) were uncertified, it is possible that many more deaths occurred in the rural areas than would have been the case if proper attention was forthcoming at or shortly after birth.

DEATHS OF ILLEGITIMATE INFANTS.

The number of deaths of illegitimate infants under one year of age registered in Saorstát Éireann during the year 1923, was 559 consisting of 318 deaths of males and 241 of females. Based on the number of illegitimate births registered, the resulting mortality rate is 344 per 1,000 births for both sexes, 375 per 1,000 for males and 311 per 1,000 births for females. These rates must be regarded as excessive. It should be borne in mind, however, that, in the absence of information relating to preceding years, as regards the deaths of illegitimate infants, and in view of the smallness of the numbers from which the mortality rates in 1923 are derived, it is possible that the period under review may not be a typical year.

Subject to this word of caution it may be stated that the illegitimate infant mortality as derived from the records for 1923, is about 6 times the mortality among legitimate infants, which was 59 per 1,000 births for both sexes, 65 per 1,000 for males and 53 per 1,000 births for females.

In other words at least one out of every 3 illegitimate infants born alive in 1923 died before the completion of their first year of life.

In England and Wales in 1923, the illegitimate infant death rate was 132 per 1,000 births or about one death to every 8 illegitimate infants born alive. This rate is about

twice that for legitimate infants, and it may be said that this proportion is maintained for that country yearly from 1906 onwards.

Table XIII. shows for the whole of Saorstát Éireann the number of deaths by causes and at different periods of life under one year of age. On account of the smallness of the numbers it was not considered desirable to calculate rates for each age and cause for one year only. Rates are, however, given for all causes and for each age period. It would appear from this table that at every period of life, the mortality among illegitimate infants is much in excess of that for all infants, as shown in Table X., especially at the age-periods one and under 2 months and 2-3 months.

It will be seen from Table XIV that 281, or more than half the total number of deaths of illegitimate infants occurred in Dublin county and city. Of the 103 deaths in the county 85 took place in institutions and 18 elsewhere, and of the 178 city deaths, the corresponding numbers were 117 and 61. Thus 79 of the 281 deaths in Dublin county and city did not occur in institutions. Of the latter 24 were described in the registers of deaths as "nurse children," 16 of these occurring in the city and 8 in the county.

Table IX.—Showing for Saorstát Éireann, by certain causes the MORTALITY AMONG INFANTS under 12 months old, per 1,000 births registered in the eleven years 1913-23.

					49.7									

The striking features of the weather of 1923 were: A mild January, a very wet February, a changeable March and April, a very cold May—the coldest in Dublin since 1869; a sunless June, a fine and warm July, an unsettled August, with violent gales on the 2nd and 29th; a disappointing September, with only 3 days of summer-like warmth; an October of low atmospheric pressure, almost constant W. and S.W. wind, and a frequent though not heavy rainfall; the coldest November since 1915; and an open December of W. and S.W. wind and a mean temperature not less than 2.9 degrees above that of the preceding November.

The rainfall was 28.513 inches, or 1.143 inches above the average annual measurement of the thirty-five years, 1881-1915, inclusive, viz., 27.370 inches.

In 1923 there were 226 'rain days', or days upon which not less than .005 inch of rain (five thousandths of an inch) was measured. This was 28 days more than the average number of rain days in the thirty-five years 1881-1915, inclusive (198). In 1868 and 1887—the warm, dry years of recent times—the rain days were only 160, and in 1870 they were only 145. A millimetre of rain—roughly .04 inch—fell on 140 days in 1923.

The rainfall in the first six months of 1923 was 14.522 inches on 103 days. In the second six months it was 13.991 inches on 123 days.

Particulars, kindly furnished by the Director, Meteorological Office, London, regarding meteorological observations taken at the Ordnance Survey Office, Phoenix Park, are published in my Quarterly Returns of Marriages, Births and Deaths

Mise, le meas,

WILLIAM J. THOMPSON,

Árd-Chláruidhe

Oifig um Chlárú Ghenearála,

								Total ..	3,139,688	1,589,509	1,550,179

III.—Statement showing, by sexes, the Estimated Population of Saorstát Éireann, in the middle of each of the years 1911—23.

—	1911.	1912.	1913.	1914.	1915.	1916.	1917.	1918.	1919.	1920.	1921.	1922.	1923.
Persons ..	3,135,000	3,135,000	3,131,000	3,132,000	3,120,000	3,132,000	3,142,000	3,155,000	3,203,000	3,216,000	3,222,000	3,160,000	3,165,000
Males ..	1,587,000	1,588,000	1,585,000	1,587,000	1,570,000	1,579,000	1,587,000	1,595,000	1,645,000	1,651,000	1,658,000	1,594,000	1,597,000
Females ..	1,548,000	1,547,000	1,546,000	1,545,000	1,550,000	1,553,000	1,555,000	1,560,000	1,558,000	1,565,000	1,564,000	1,566,000	1,568,000

Note.—This Statement (III.) has been constructed by adding the Births registered up to the middle of each year to the Population as ascertained at the Census of 1911, and deducting the number of Deaths registered and of emigrants enumerated. Some adjustments covering the years 1915-21 were made as regards the movements of British Military. The populations given in the above statements from 1841 to 1921 include the latter.

INDEX TO SUPERINTENDENT REGISTRARS' DISTRICTS.

* Thus the number of Marriages, Births and Deaths in the Abbeyleix Superintendent Registrar's District may at once be ascertained by referring to the Superintendent Registrar's District, numbered 21 (see p. 2); the number for Ardee by combining the information given in relation to numbers 29 and 32, and the other Superintendent Registrars' Districts.

APPENDIX.

Table showing the number of Searches made, number of Certificates issued, and the total amount received as Fees for same at the General Register Office, Dublin, during the 60 years 1864-1923.

YEARS.	Annual Number of Searches in the Registers.	Annual Number of Certificates.	Amount received as Fees for Searches and Certificates.	Years.	Annual Number of Searches in the Registers.	Annual Number of Certificates.	Amount received as Fees for Searches and Certificates.

N.B.—The above figures do not include searches made and certificates issued, free of charge, for the use of Government Departments. During the year 1923, 6,961 such searches were made for the Ministry of Defence in connection with separation allowances to the families of men serving in the National Army. For other Public Departments, 739 searches were made and 368 certificates issued.
