REPORT OF AN tÁRD-CHLÁRAITHEOIR  
FOR THE YEAR 1952

Do'n Aire Sláinte.

Tá sé d'ondír agam a chur faoi do bhráid Tuarascáil ar Beireatasáil, Básanna agus Pósanna cláraithe sa bhliain, 1952.

P. Ó CINNÉIDE,  
Ard-Chláraitheoir.

The statistics in this Report relate to the area in Ireland exclusive of the Six Counties.

In this Report births have been assigned to the district containing the normal residence of the parents and deaths to the district containing the normal residence of the deceased. The number of births shown for each of the years 1943 to 1952 is exclusive of late registrations and the number of deaths for each of the years 1940 to 1952 is exclusive of non-residents.

GENERAL SUMMARY

*Marriages* - There were 15,876 marriages registered during the year 1952 compared with 16,017 in 1951. The marriage rate per 1,000 population was 5.4. This rate has been comparatively stable since 1947. It is, however, abnormally low when comparison is made with other countries. The average annual marriage rate in 1942-51 was 5.6 per 1,000 population.

*Births* - The number of births registered during 1952 was 64,631 and the birth rate was 21.9 per 1,000 population compared with 21.2 per 1,000 population in 1951. There was a small decline in the birth rate each year from 1948 to 1951. The average annual rate for 1942-51 was 22.1 per 1,000 population.

The number of illegitimate births registered was 1,619 which is 2.5 per cent of all births. This proportion is considerably lower than that of 3.4 per cent for the years 1942-51.

*Deaths* - The number of deaths registered during 1952 was 35,105 and the death rate was 11.9 per 1,000 population. This rate is the lowest rate recorded up to 1952. The average annual rate for the period 1942-51 was 13.9 per 1,000 population.

Of the deaths registered in 1952, 28.4 per cent were stated to be due to heart disease, 11.9 to malignant neoplasms, 8.6 to vascular lesions affecting the central nervous system and 4.5 to tuberculosis (all forms).

The number of deaths from tuberculosis was 1,579 and the rate was 0.54 per 1,000 population. This is the lowest rate recorded up to 1952. There has been a considerable decline in this rate since 1947 when the rate was 1.24 per 1,000 population.

There were 4,207 deaths from malignant neoplasms and neoplasms of lymphatic and haematopoietic tissues (excluding Hodgkin's disease and leukaemia and aleukaemia). This total is comparable with that for "cancer" in the 1949 and earlier Reports. The rate in 1952 was 1.43 per 1,000 population compared with 1.44 in 1951.

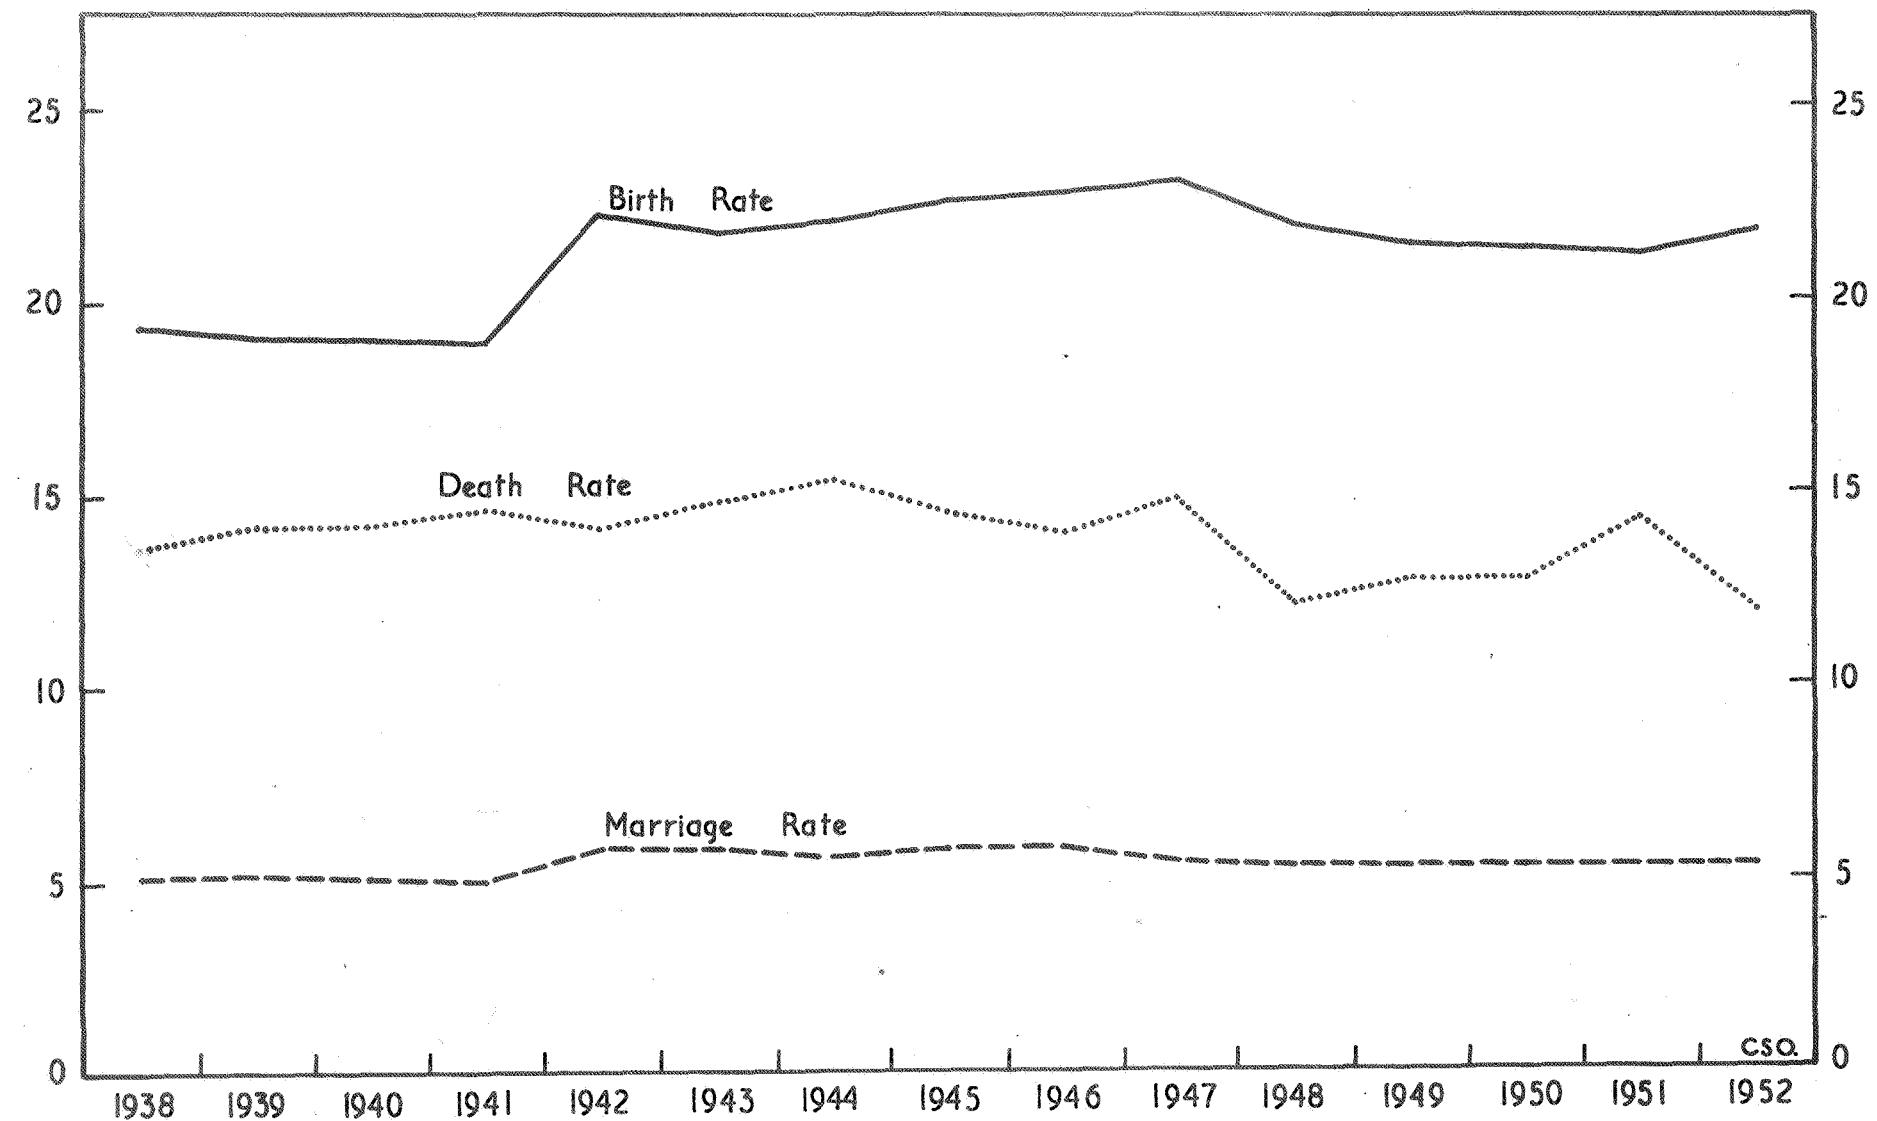

During 1952 the deaths of 2,674 infants under 1 year were registered, equivalent to a rate of 41 per 1,000 live births which is the lowest rate recorded up to 1952.

The total number of deaths from accidents and other external causes in 1952 was 862 of which road transport accidents account for 239 deaths.

*Issue of Authority for Registration* - Births and deaths which have not been registered within 1 year of their occurrence can only be registered on the authority of an tÁrd-Chláraitheoir. The actual number of births registered on the authority of an tÁrd-Chláraitheoir in 1952 was 1,288 and the number of deaths registered was 210. Throughout the tables in this Report these births and deaths have been excluded.

*Population* - The estimated population at mid-1952 was 2,949,000.

Diagram I.  
BIRTH, MARRIAGE AND DEATH RATES, 1938 - 1952.

## MARRIAGES

There were 15,876 marriages registered during the year 1952. This figure is 808 less than the average for the decennial period 1942-51.

The annual rate per 1,000 population for the year 1952 was 5.38 compared with 5.41 in 1951. The rate for the decennial period ended with 1951 was 5.63 per 1,000 population. Table 1 shows the marriage rate for Ireland, The Six Counties, England and Wales and Scotland for each of the years 1938-52.

TABLE 1

NUMBER OF MARRIAGES PER 1,000 POPULATION IN IRELAND AND NEIGHBOURING COUNTRIES, 1938-1952

Years	Ireland*	Six Counties	England and Wales	Scotland
1938	5.1	6.7	8.8	7.8
1939	5.2	7.1	10.6	9.2
1940	5.1	7.6	11.3	10.7
1941	5.0	9.3	9.4	9.5
1942	5.9	9.0	8.9	9.5
1943	5.9	7.8	7.2	7.6
1944	5.7	7.2	7.1	7.2
1945	5.9	7.9	9.3	9.5
1946	5.9	7.4	9.0	8.9
1947	5.5	7.1	9.3	8.6
1948	5.4	6.9	9.0	8.5
1949	5.4	6.8	8.5	8.1
1950	5.4	6.6	8.2	7.8
1951	5.4	6.8	8.2	8.1
1952	5.4	6.8	8.0	8.0

\* Exclusive of the Six Counties.

The marriage rate in Ireland is very low when comparison is made with England and Wales, Scotland and the Six Counties. The rate in 1952 is only about two-thirds that in England and Wales and Scotland. The rate in this country has been practically stable since 1947 but in the other areas shown there have been significant declines since 1947. From 1942 to 1946 the marriage rate was about 5.9 per 1,000 population. Although it has fallen somewhat since 1947 it is still higher than the rates in the decade preceding World War II.

## Mode of Celebration

The number of marriages celebrated in accordance with the rites and ceremonies of the Catholic Church registered during 1952 amounted to 14,985 (equal to 94.4 per cent of the total) and other marriages numbered 891. In the year 1952 the number of marriages other than Catholic recorded include 582 according to the rites and ceremonies of the Protestant Episcopalian Church, 147 in Presbyterian Meeting Houses, 32 in registered buildings belonging to various other religious denominations, 98 by civil contract in the registrars' offices, 2 according to the usage of the Society of Friends and 30 according to Jewish rites.

At the Census of 1946 Catholics represented 94.3 per cent of the population, Protestant Episcopalians 4.2 per cent, Presbyterians 0.8 per cent, Methodists 0.3 per cent and Other Denominations 0.4 per cent.

The number of Catholic marriages recorded during 1952 corresponds to a rate of 5.39 per 1,000 of the estimated Catholic population, a rate which is 0.28 below the average rate for the preceding ten years and the rate for all other marriages is 5.30 per 1,000 of all persons other than Catholics in the population or 0.36 above the average.

Corresponding rates for each year from 1942 to 1952 are shown in Table 11.

TABLE 11

MARRIAGES REGISTERED IN 1952 AND IN EACH OF THE PREVIOUS TEN YEARS ACCORDING TO THE MODES OF CELEBRATION; WITH THE RATES PER 1,000 POPULATION FOR CATHOLIC AND ALL OTHER MARRIAGES

Years	Marriages registered other than Catholic							Catholic marriages	Total marriages registered	Rate per 1,000 of estimated corresponding population

1952	582	147	32	98	2	30	891	14,985	15,876	5.39	5.30	5.38

### Marriage Rates by Counties

The marriage rates in the counties and county boroughs are shown in Table 13. In making comparisons of these marriage rates it must be remembered that the rates are based on the total number of marriages recorded in each area irrespective of the fact that the persons married may not be residents of the area in which the marriage took place. An examination of the returns of marriages shows that many persons living in the rural portions of the country are married in the county boroughs or other urban areas. This fact accounts in some measure for the high rates for the county boroughs. In 1952 these were, Dublin County Borough 8.39 per 1,000 population, Cork County Borough 9.72, Limerick County Borough 8.52, Waterford County Borough 6.90. The lowest rates were recorded in County Clare 3.23 per 1,000 population and in Leitrim 3.32 per 1,000 population.

### Age at Marriage

The schedules to the Acts relating to marriage indicate that the law does not require that the ages of the contracting parties should be entered in the register or certificate. It is necessary only that each party should be described as of full age or minor as the case may be with the result that a complete record of the ages of the persons married is not available.

TABLE III  
PROPORTION OF PERSONS MARRIED NOT OF FULL AGE DURING THE YEARS 1942-52

Year	Total marriages	Persons not of full age	
		Of 100 men married	Of 100 women married
1942	17,470	1.99	8.51
1943	17,328	1.56	7.48
1944	16,772	2.07	8.49
1945	17,301	1.51	7.69
1946	17,525	1.13	6.39
1947	16,290	1.50	7.03
1948	16,115	1.97	8.51
1949	16,009	2.09	7.35
1950	16,018	1.23	6.74
1951	16,017	1.82	8.54
1952	15,876	1.83	8.49

Table III shows the proportion of persons married not of full age during the years 1942-52. The proportion of husbands who were stated to have married under age in 1952 was 1.83 per cent; in the case of wives the proportion was 8.49 per cent.

### BIRTHS

The information on births contained in this Report relates to live births only. All the figures relate to the year of registration and no figures are compiled for the year of occurrence. Up to the year 1942 the figures published for the numbers of births included all births registered, irrespective of the period between date of birth and date of registration. From 1943 the published figures exclude late registrations (births registered more than one year after the date of birth).

The downward trend in the number of births and in the birth rate, which was evident from 1948 to 1951 was reversed in 1952. The total number of births registered (excluding late registrations) was 64,631 compared with 62,878 in 1951. The birth rate per 1,000 population increased from 21.2 in 1951 to 21.9 in 1952. The following table shows the number of births and the birth rate for each year since 1938, together with the birth rate in the Six Counties, England and Wales and Scotland during the same period.

TABLE IV

NUMBER OF BIRTHS IN IRELAND\* AND BIRTH RATES PER 1,000 POPULATION IN IRELAND\* AND NEIGHBOURING COUNTRIES, 1938-1952

Year	Ireland*		Six Counties	England and Wales	Scotland
	No. of Births (thousands)	Birth rate per 1,000 population	Birth rate per 1,000 population		
1938	56.9	19.4	20.0	15.1	17.7
1939	56.1	19.1	19.5	14.9	17.4
1940	56.6	19.1	19.6	14.6	17.1
1941	56.8	19.0	20.8	14.2	17.9
1942	66.1	22.3	22.8	15.8	18.1
1943	64.4	21.9	24.2	16.2	18.4
1944	65.4	22.2	23.5	17.7	18.5
1945	66.9	22.7	22.0	15.9	16.9
1946	67.9	22.9	22.6	19.2	20.3
1947	69.0	23.2	23.3	20.5	22.0
1948	65.9	22.0	21.9	17.8	19.4
1949	64.2	21.5	21.4	16.7	18.5
1950	63.6	21.4	21.0	15.9	17.9
1951	62.9	21.2	20.7	15.5	17.7
1952	64.6	21.9	20.9	15.3	17.7

\* Exclusive of the Six Counties

There was a fairly sharp increase in the birth rate from about 19 per thousand in the years 1938 to 1941 to 22.3 per 1,000 population in 1942. A slight decline occurred in 1943 and, thereafter, there was a continuous rise each year up to 1947 when the rate of 23.2 was recorded. This was the highest rate recorded for any individual year since 1894. On account of the introduction of rationing in 1941, there was a reduction in the time interval between birth and registration with the result that more births were registered in 1942 than would otherwise have been the case. The rate shown for 1942 must, therefore, be considered as somewhat overstated in comparison with the other rates. From 1948 to 1951 there was a decline each year in the birth rate but the 1952 rate increased to 21.9 per 1,000 population. This rate is considerably higher than the pre-war average of 19.5 in the years 1929-1938.

The war-time and post-war increase in the birth rate also occurred in the Six Counties, England and Wales and Scotland as the table above shows. In England and Wales and in Scotland the highest birth rate in the period also occurred in 1947 and there has also been a decline each year since 1947 in these countries. In the Six Counties there was a slight increase in the birth rate in 1952 compared with 1951.

#### Birth Rate by Area

Table V shows the crude birth rates in the provinces and in the aggregate urban and aggregate rural districts in 1938 and for each year since 1945.

The interesting feature of this table is the tendency towards uniformity in the provincial and in the urban and rural rates. In 1938 the difference between the highest birth rate (23.8 per 1,000 population in Dublin County and County Borough) and the lowest rate (17.3 per 1,000 population in Ulster (part of)) was 6.5; in 1952, however, the corresponding difference was only 5.1. In 1952 the birth rate in Dublin County and County Borough was 0.3 per 1,000 above that of 1938 and the rates in the rest of Leinster and in the other provinces were also higher than in 1938. The large increase in the birth rate during World War II was practically confined to that part of the country outside Dublin County and County Borough. In 1952 the difference between the urban and rural rate was only 0.6 compared with 4.9 in 1938.

Table VI shows crude birth rates per 1,000 population per 1,000 women aged 15-44 together with the legitimate births per 1,000 married women aged 15-44 years.

TABLE VI

NUMBER OF BIRTHS IN 1952 PER 1,000 POPULATION AND PER 1,000 FEMALES AGED 15-44 AND  
NUMBER OF LEGITIMATE BIRTHS PER 1,000 MARRIED FEMALES 15-44 IN EACH COUNTY AND  
COUNTY BOROUGH

County or County Boro'	Total births per 1,000 population	Total births per 1,000 women aged 15-44	Legitimate births per 1,000 married women 15-44 years	
			Crude	Standardised*

TOTAL	21.9	109.3	251.7	251.7

\* The standardisation was indirect. Figures for the number of births per married women in each quinquennial age group from 15 years to 45 years were found from data relating to births in Dublin County Borough in 1941-45. For any particular county this fixed set of fertility rates was multiplied by the married women in the county in the corresponding age groups in 1951. The sum of the resulting products (the "expected" births) was divided by the number of married women aged 15-44 to derive an "expected" fertility rate. This "expected" rate was divided by the Irish crude rate in 1951 to obtain a "standardising" ratio which was then transferred to base Ireland = 1. By multiplying the crude fertility rate for any particular county by its corresponding standardising ratio the standardised fertility rate was obtained.

**Illegitimate Births**

There were 1,619 illegitimate births registered in 1952. This represents a proportion of 2.5 per cent of all births registered. The proportion of illegitimate births rose from 3.7 per cent in 1942 to 3.9 per cent in the years 1944-46. Between 1946 and 1951 there was a decline each year in the proportion. The percentage of illegitimate births in each of the provinces is shown in Table VII.

TABLE VII

ILLEGITIMATE BIRTHS AS A PERCENTAGE OF TOTAL BIRTHS 1942-1952 IN EACH PROVINCE

Year	Total	Dublin Co. Borough and County	Rest of Leinster	Munster	Connacht	Ulster (part of)
1942	3.7	2.5	5.0	3.8	2.5	4.6
1943	3.8	3.0	5.0	4.2	2.3	4.2
1944	3.9	3.0	5.2	4.0	2.4	5.0
1945	3.9	3.0	5.3	4.1	2.4	4.7
1946	3.9	2.8	5.2	4.2	2.6	4.5
1947	3.4	2.8	4.4	3.5	2.2	4.3
1948	3.3	2.5	4.3	3.7	1.7	4.0
1949	3.1	2.4	4.2	3.2	1.9	4.0
1950	2.6	2.0	3.5	2.8	1.5	2.9
1951	2.5	1.9	3.6	2.5	1.5	3.6
Average 1942-51	3.4	2.6	4.6	3.6	2.1	4.2
1952	2.5	1.9	3.5	2.6	1.5	3.1

The highest percentages occur in Leinster (excluding Dublin County and County Borough) and in Ulster (part of) while the lowest percentages occur in Connacht. The highest percentages in 1952 were in the following counties: Wicklow (4.9), Waterford and Limerick (4.6) and Wexford (4.3).

**Proportion of Males to Females**

The number of male births registered in 1952 was 33,026 and the number of females was 31,605. The sex ratio was 1,045 males per 1,000 females compared with 1,057 in 1951. The sex ratio for each year since 1942 is shown in Table VIII and legitimate and illegitimate births are distinguished.

TABLE VIII  
NUMBER OF MALE BIRTHS PER 1,000 FEMALE BIRTHS, 1942-1952

Year	Legitimate	Illegitimate	Total
1942	1056	1158	1059
1943	1070	1008	1068
1944	1059	1028	1058
1945	1057	1014	1056
1946	1070	1092	1071
1947	1071	1089	1071
1948	1064	1076	1064
1949	1050	1101	1051
1950	1074	965	1071
1951	1055	1103	1057
Average 1942-51	1063	1063	1063
1952	1046	1016	1045

Since 1942 the sex ratio for all births has varied from 1045 to 1071. As is to be expected on account of the smaller numbers of illegitimate births the variation is wider for these than the legitimate births; the lowest figure is 965 and the highest 1158. The variability in the ratio from year to year in both the legitimate and illegitimate classes may be attributed to chance.

#### Multiple Births

The number of infants born alive in multiple births registered during 1952 was 2,003 consisting of 985 pairs of twins and 11 sets of triplets as compared with 1,799 (892 pairs of twins and 5 sets of triplets) for the previous year. The numbers of multiple births as a percentage of total births for each year since 1942 are shown in Table IX, distinguishing legitimate and illegitimate births.

TABLE IX  
MULTIPLE BIRTHS AS A PERCENTAGE OF TOTAL BIRTHS, 1942-52

Year	Legitimate Births	Illegitimate Births
1942	2.4	2.8
1943	2.6	2.2
1944	2.7	2.6
1945	2.8	1.6
1946	2.3	1.7
1947	2.8	2.3
1948	2.6	2.0
1949	2.9	1.5
1950	2.8	2.5
1951	2.9	1.9
Average 1942-51	2.7	2.1
1952	3.1	2.2

The percentage of multiple births was higher for legitimate births than for illegitimate births in each year except in 1942.

#### Late Registrations

As stated on Page VI, the figures for numbers of births exclude late registrations, i.e. births registered more than 1 year after occurrence. A considerable number of such births is registered every year. The number in 1952 was 1,288. The inclusion of these births would change the birth rate from 21.9 to 22.4 per 1,000 population.

#### D E A T H S

The number of deaths registered during the year 1952 was 35,105, the males numbering 19,918 and the females 16,187. The total is 7,277 less than the number for 1951 and 6,203 less than the average for the decennial period 1942-51.

The death rate in 1952 was 11.9 per thousand population, 2.4 below that for 1951. This rate is the lowest annual definitive rate ever recorded. The average rate for the period 1942-51 was 13.9 per thousand population.

Table X shows the number of deaths in the country for each year since 1938 and compares the annual death rate with those in the Six Counties, England and Wales and Scotland.

TABLE X

DEATH RATE PER 1,000 POPULATION IN IRELAND AND NEIGHBOURING COUNTRIES, 1938-1952

Year	Ireland*		Six Counties	England and Wales	Scotland
	No. of deaths (thousands)	Death rate per 1,000 population	Death rate per 1,000 population		
1938	40.0	13.6	13.7	11.6	12.6
1939	41.7	14.2	13.5	12.1	12.9
1940	41.9	14.2	14.6	14.4	14.9
1941	43.8	14.6	15.2	13.5	14.7
1942	41.6	14.1	13.3	12.3	13.3
1943	43.5	14.8	13.4	13.0	14.0
1944	45.1	15.3	12.8	12.7	13.6
1945	42.8	14.5	12.3	12.6	13.2
1946	41.5	14.0	12.5	12.0	13.1
1947	44.1	14.8	12.6	12.3	12.9
1948	36.4	12.1	11.2	11.0	11.8
1949	38.1	12.7	11.5	11.8	12.3
1950	37.7	12.7	11.6	11.6	12.4
1951	42.4	14.3	12.8	12.5	12.9
1952	35.1	11.9	10.8	11.3	12.0

\* Exclusive of the Six Counties

For each year from 1942 to 1951 the death rate in this country is the highest in the table. In 1951 the crude death rate was over 10 per cent. higher than the death rates in the Six Counties, England and Wales and Scotland. In 1952 however, the rate was slightly less than that in Scotland and only about 5 per cent. higher than the rate in England and Wales.

The decrease in the death rate since 1947 resulted in a large improvement in the expectation of life at birth in 1951 compared with earlier periods. The 1951 official life tables have not been compiled at the time of writing and for comparative purposes the expectations of life at birth in 1951 have been compiled by an abridged method of computation. These rates compare with corresponding rates in 1941 and 1946 as follows:-

## Expectations of life at birth

Year	Males	Females
1941	59.0	61.0
1946	60.5	62.4
1951	63.7	66.6

Between 1946 and 1951 the male expectation increased by 3.2 years compared with 1.5 years in the preceding 5 years. The increase for females was 4.2 years compared with 1.4 years in the earlier period.

In Tables 13 and 15 death rates are given for each of the provinces, counties, county boroughs, principal towns and aggregate urban and aggregate rural districts. Care must be taken in drawing inferences from the differences in death rates in the different areas of the country. Since the rates of mortality are higher in the older sections of any population it is obvious that the crude death rate for all ages in a population may be affected markedly by the age distribution of the population. If the proportion of elderly persons is higher in a particular section of the population than it is in the general population then the death rate in this section will be higher than it is in the general population even though health conditions are the same in this section of the population. In order to compare death rates by areas it is necessary, therefore, to standardise the death rates for age. For a particular county this is done by calculating the death rate in each age group of the population in that county and then multiplying the death rate in each age group by the total population in the whole country in that age group and summing the resulting products. This sum is then

divided by the total population in the country at all ages to deduce the standardised rate for the county. Differences arising from variations in the age distributions of the population in the counties are eliminated by using standardised rates. Table XI shows the crude and standardised rates for each county and county borough.

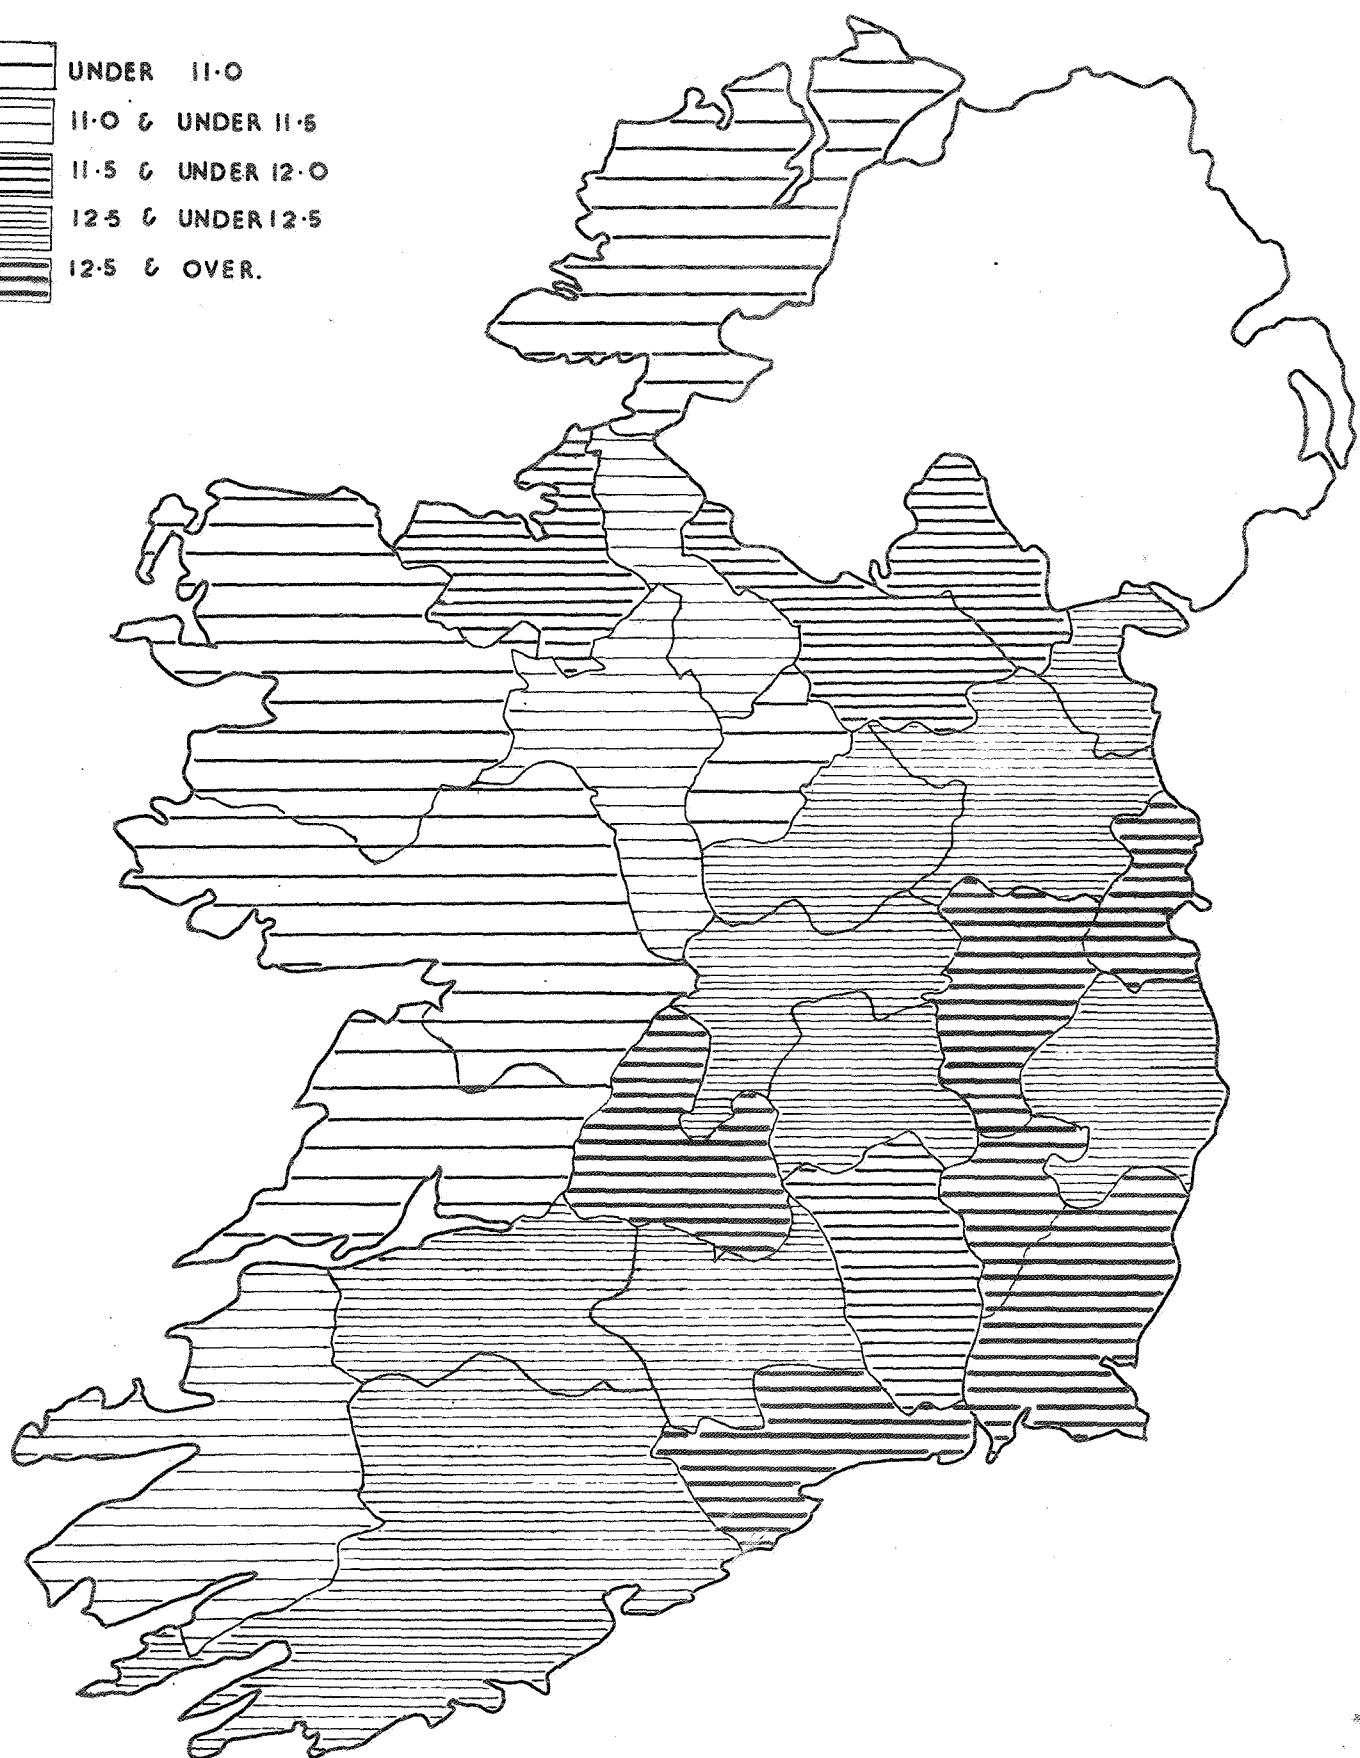

TABLE XI  
CRUDE AND STANDARDISED DEATH RATES IN EACH COUNTY AND COUNTY BOROUGH IN 1952

County, etc.	Deaths per 1,000 population	
	Crude	Standardised
Carlow	12.21	12.58
Dublin County Borough	10.00	12.75
Dun Laoghaire Borough	11.81	12.62
Dublin County (remainder)	9.12	12.70
Kildare County	10.60	12.79
Kilkenny "	11.97	11.64
Laoighis "	12.78	12.01
Longford "	12.36	10.92
Louth "	11.20	12.21
Meath "	11.65	12.07
Offaly "	12.18	12.43
Westmeath "	12.28	12.07
Wexford "	13.04	12.56
Wicklow "	11.41	12.07
LEINSTER	10.95	12.44
Clare County	12.74	10.89
Cork County Borough	11.95	13.25
Cork County	13.00	11.98
Kerry County	12.70	11.38
Limerick County Borough	10.43	12.83
Limerick County	12.72	12.13
Tipperary N.R.	13.02	12.62
Tipperary S.R.	12.38	12.12
Waterford County Borough	12.41	14.10
Waterford County	12.64	11.62
MUNSTER	12.58	12.04
Galway	10.97	10.30
Leitrim	13.71	11.06
Mayo	12.69	10.16
Roscommon	14.36	11.42
Sligo	14.15	11.89
CONNACHT	12.63	10.71
Cavan	13.05	11.51
Donegal	12.57	10.98
Monaghan	12.38	11.96
ULSTER (part of)	12.65	11.31
TOTAL	11.90	11.90

In certain areas the standardised rates are quite different from the crude rates. Leinster which has the lowest crude death rate has the highest standardised rate among the provinces and Connacht which has the second highest crude rate has the lowest standardised rate. Standardisation raises the rates in the county boroughs and in

Diagram 2.

STANDARDISED DEATH RATES (PER 1000 POPULATION)  
FROM ALL CAUSES 1952.

counties Carlow, Dublin, Kildare, Louth, Meath, Offaly and Wicklow and lowers them everywhere else. The crude rate varies from 9.12 per 1,000 population in Dublin County (excluding Dun Laoghaire Borough) to 14.36 in Roscommon. The standardised rates are more uniform, the range of variation being from 10.16 in Mayo to 14.10 in Waterford County Borough.

For valid comparisons between the death rates in different counties and county boroughs, it is, of course, the standardised rates which should be used. These show that, in general, having allowed for differences in age constitution of the population, death rates are lowest in the counties of Longford, Clare, Galway, Leitrim, Mayo and Donegal. They are highest in the County Boroughs of Limerick, Waterford, Cork and Dublin and in County Kildare.

#### Causes of Death

The tables in this Report showing cause of death are based on the Sixth Revision of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948, prepared by the World Health Organization. The Sixth Revision was used for the first time in classifying deaths by cause in the 1950 Report. From 1940 to 1949 the Fifth Revision was used.

In Table 19 which shows causes of death by age for the whole country the classification of cause of death used is the Intermediate International List with some further subdivision of causes shown by small letters placed after the intermediate list numbers. The Abbreviated International List is used to classify deaths in Table 20. Certain causes in the Abbreviated List are, however, subdivided further and these are shown by small letters placed after the abbreviated list number. For example B40 is divided into B40a (complications of pregnancy and childbirth), B40b (puerperal sepsis) and B40c (other complications of the puerperium). In Tables 21 and 23 a special list of 47 causes is used and the relationship between this list and the International List is shown at the beginning of Table 21. In Table 22 a short list of 12 causes is used and the relationship between this list and the International List is shown at the beginning of the Table. For infant mortality a special list of causes has been adopted and these are used in Tables 24 to 27.

Table X11 shows the numbers of deaths and death rates from some of the principal causes in 1935-37, 1945-47 and for each year since 1948.

For comparability the classification used in this table is based on the Sixth Revision of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948, and, therefore, the numbers of deaths and death rates in certain causes for years prior to 1950 do not agree with the figures published in the annual reports for those years.

Compared with 1935-37 the 1952 figures show marked declines in the numbers of deaths from tuberculosis, diphtheria and other infective and parasitic diseases. In 1952 there were 1,579 deaths from tuberculosis compared with an annual average of 3,629 in 1935-37 and there were only 7 deaths from diphtheria compared with an annual average of 339 in 1935-37. The death rate from all forms of tuberculosis which was 122.2 per 100,000 population in 1935-37 was only 53.5 in 1952 and the death rate from diphtheria, which was 11.4 per 100,000 population in 1935-37 fell to 0.2 in 1952. In each of the years 1949-52 the number of deaths from diphtheria did not exceed 10 in number.

Over the period shown in the table the death rates from cancer and other malignant neoplasms, vascular lesions affecting the central nervous system, diseases of the heart and other diseases of the circulatory system, have shown an upward tendency. The 1952 death rate for each of these causes is larger than the average of the corresponding rates in 1935-37.

The death rate from influenza shows no definite trend and on account of a severe influenza epidemic which occurred in 1951, the 1951 figure is higher than that for any single year since 1937. There was a large decrease in the death rate from other

respiratory diseases between 1935-37 and 1948 and an increase occurred between 1948 and 1951, but the 1952 figure shows a considerable decline from that of 1951. There were increases in the death rates from senility and other diseases between 1948 and 1951, but the 1951 figures are considerably lower than those of 1935-37 for which period the average death rate from all causes was much the same as in 1951: in 1952 there were large decreases in the death rates from these diseases. There was no appreciable variation in the death rate from accidents and other external causes over the whole period.

TABLE XII

NUMBERS OF DEATHS AND DEATH RATES FROM PRINCIPAL CAUSES 1935-37, 1945-47, 1948, 1949,  
1950, 1951 AND 1952

Cause of death	Period						
	1935-37	1945-47	1948	1949	1950	1951	1952
	Annual average						
Tuberculosis of respiratory system	2,851	2,731	2,452	2,142	1,876	1,712	1,207
Tuberculosis, other forms	778	863	651	570	504	450	372
Diphtheria	339	144	30	10	5	8	7
Other infective and parasitic diseases	929	569	516	451	324	371	353
Cancer and other malignant neoplasms	3,601	3,980	4,074	4,161	4,099	4,275	4,207
Vascular lesions affecting central nervous system	2,350	2,810	2,656	2,842	2,661	3,025	3,034
Diseases of the heart	7,509	10,459	9,564	10,016	10,463	11,117	9,977
Other diseases of the circulatory system	907	948	923	1,063	1,424	1,712	1,725
Influenza	1,473	575	201	280	325	2,399	238
Other diseases of the respiratory system	5,253	3,473	2,589	2,696	2,531	3,250	2,221
Senility	6,176	6,229	4,762	5,591	4,734	4,982	3,591
Other diseases	9,924	9,069	7,017	7,261	7,890	8,085	7,311
Accidents and other external causes	982	910	922	979	905	996	862
ALL CAUSES	43,072	42,760	36,357	38,062	37,741	42,382	35,105
Rates per 100,000 population							
Tuberculosis of respiratory system	96.0	92.4	81.8	71.7	63.2	57.8	40.9
Tuberculosis, other forms	26.2	29.2	21.7	19.1	17.0	15.2	12.6
Diphtheria	11.4	4.9	1.0	0.3	0.2	0.3	0.2
Other infective and parasitic diseases	31.3	19.2	17.2	15.1	10.9	12.5	12.0
Cancer and other malignant neoplasms	121.3	134.7	135.9	139.2	138.1	144.4	142.7
Vascular lesions affecting central nervous system	79.2	95.1	88.6	95.0	89.6	102.2	102.9
Diseases of the heart	253.0	353.9	319.0	335.0	352.4	375.5	338.3
Other diseases of the circulatory system	30.6	32.1	30.8	35.6	48.0	57.8	58.5
Influenza	49.6	19.5	6.7	9.4	10.9	81.0	8.1
Other diseases of the respiratory system	177.0	117.5	86.4	90.2	85.2	109.8	75.3
Senility	208.0	210.8	158.8	187.1	159.4	168.3	121.8
Other diseases	334.3	306.9	234.0	242.9	265.8	273.1	247.9
Accidents and other external causes	33.1	30.8	30.8	32.8	30.5	33.6	29.2
ALL CAUSES	1451.0	1447.0	1212.7	1273.4	1271.2	1431.5	1190.4

The proportions of deaths in 1952 from the principal causes in certain age groups are shown in Table XIII.

TABLE XIII  
PROPORTIONS OF DEATHS FROM THE PRINCIPAL CAUSES IN CERTAIN AGE GROUPS, 1952

Abbreviated List No.	Cause of Death	All Ages	Under 1	1-4	5-14	15-24	25-34	35-44	45-54	55-64	65-74	75 & over

It will be observed that diseases of the heart caused the largest proportions of deaths, namely 284 in each 1,000 deaths. The next in order are malignant neoplasms (119), Senility (103) and vascular lesions affecting central nervous system (86). At ages under 1 year congenital malformations and diseases of early infancy accounted for 648 out of every 1,000 deaths, while pneumonia caused a further 118 deaths and 53 were due to diarrhoea and enteritis. At ages 1-4 years pneumonia caused 169 per 1,000 deaths and tuberculosis 140 per 1,000 deaths. The proportion of deaths caused by tuberculosis increases considerably in the early adult age groups. At ages 5-14 years 210 out of every 1,000 deaths were caused by this disease. At ages 15-24 the proportion was 391 per 1,000 deaths and at ages 25-34 it was 382 per 1,000 deaths. At ages 35-44 years tuberculosis was still the most important single cause of death, the proportion of deaths being 209 per 1,000 deaths. Between ages 45 and 75 years the chief causes of death

were diseases of the heart and malignant neoplasms, while at ages over 75 years diseases of the heart accounted for about one-third of the deaths at these ages and senility accounted for a further one-quarter.

#### Infective Diseases

In 1952 there were 1,939 deaths caused by infective and parasitic diseases. Tuberculosis caused 1,579 of these deaths. The number caused by typhoid and paratyphoid fevers was 3, scarlet fever caused 10 deaths, diphtheria 7 deaths, whooping cough caused 86 deaths and 52 deaths were due to measles. Acute poliomyelitis (including late effects) caused 13 deaths and acute encephalitis (including late effects) caused 12 deaths.

#### Tuberculosis

Table XIV shows the death rates from all forms of tuberculosis in Ireland and neighbouring countries since 1938.

TABLE XIV

DEATHS PER 1,000 POPULATION FROM TUBERCULOSIS IN IRELAND AND NEIGHBOURING COUNTRIES,  
1938-1952

Year	Ireland*	Six Counties	England and Wales	Scotland
1938	1.09	0.92	0.64	0.69

1950	0.80	0.48	0.36	0.54
1951	0.73	0.45	0.32	0.43
1952	0.54	0.30	0.24	0.32

\* Exclusive of the Six Counties

The death rate in this country, which was 1.09 per thousand population in 1938, increased during the war years to 1.47 in 1942 since when, with the exception of the year 1947, there has been a downward trend. The improvement between 1938 and 1952 has been less marked here than in the other areas. The 1952 rate in this country is more than twice that in England and Wales and is also considerably higher than the rates in the Six Counties and in Scotland.

Table XV shows the number of deaths and death rates from tuberculosis of the respiratory system and from all other forms of tuberculosis per thousand population for each year since 1938.

In 1952 there were 1,579 deaths from tuberculosis, of which 1,207 were caused by tuberculosis of the respiratory system and 372 by all other forms of tuberculosis. The decrease between 1938 and 1952 in the rate for tuberculosis of the respiratory system was 52 per cent and for all other forms of tuberculosis it was 46 per cent.

TABLE XV

NUMBERS OF DEATHS AND DEATH RATE PER 1,000 POPULATION FROM TUBERCULOSIS OF RESPIRATORY SYSTEM AND FROM ALL OTHER FORMS OF TUBERCULOSIS

Year	Tuberculosis of respiratory system		Other forms of tuberculosis	
	Number	Rate per 1,000 population	Number	Rate per 1,000 population
1938	2,498	0.85	718	0.24

For males the 1952 death rate of 0.62 per 1,000 population compares with a rate of 1.27 in 1947 and for females the 1952 rate is 0.45 as against 1.22 in 1947. The greatest reductions have been made at ages 10-24 years in which groups the 1952 rates are less than one-third of the corresponding rates in 1947. As age increases the proportionate decline decreases until at ages over 65 years there is little change in the rates when 1947 is compared with later years.

Table XVII compares the death rate from all forms of tuberculosis in Ireland and neighbouring countries in 1950-52.

TABLE XVII

DEATHS FROM TUBERCULOSIS (ALL FORMS) IN CERTAIN AGE GROUPS PER 1,000 CORRESPONDING POPULATION 1950-1952

Age groups	Ireland*	Six Counties	England and Wales	Scotland	Index Numbers (Ireland = 100)

STANDARDISED‡	0.69	0.40	0.28	0.41	100	58	41	59

\* Exclusive of the Six Counties.

† Standardised to the 1951 Census population of Ireland\*.

In this country the mortality rate is highest in the age-group 25-34 years but there is not much variation in the rate between the ages 20 and 55 years. In the Six Counties the death rate is highest at ages 45-54 years but at ages above 25 years there is not a great deal of variation with age. In England and Wales the mortality from tuberculosis increases with age (apart from the age group 35-44 years) and the highest rate is at ages 55 years and over. In Scotland the mortality is highest at ages 20-24 years, decreases somewhat to age 35 years and remains practically constant for later age groups. The index numbers show that in each age-group the rate in this country is considerably higher than in any of the other areas.

As already observed there was a considerable decline in the death rate from tuberculosis between 1947 and 1952. Table XVIII shows the average mortality rates from all forms of tuberculosis in the counties in 1945-47 and 1950-52 and also the percentage decreases in the interval.

The average rate declined from 1.22 to 0.69 per 1,000 population in the five years interval, a decline of 43.4 per cent. Each county recorded a substantial decrease in the mortality rate. In 1950-52 the highest rates per 1,000 population were Louth (0.89), Clare (0.85), Waterford Co. Borough (0.84), Limerick County (0.83), Westmeath (0.81) and the lowest rates were Leitrim (0.49), Dun Laoghaire Borough (0.50), Monaghan (0.51).

TABLE XV

For males the 1952 death rate of 0.62 per 1,000 population compares with a rate of 1.27 in 1947 and for females the 1952 rate is 0.45 as against 1.22 in 1947. The greatest reductions have been made at ages 10-24 years in which groups the 1952 rates are less than one-third of the corresponding rates in 1947. As age increases the proportionate decline decreases until at ages over 65 years there is little change in the rates when 1947 is compared with later years.

Table XVII compares the death rate from all forms of tuberculosis in Ireland and neighbouring countries in 1950-52.

TABLE XVII

DEATHS FROM TUBERCULOSIS (ALL FORMS) IN CERTAIN AGE GROUPS PER 1,000 CORRESPONDING POPULATION 1950-1952

Age groups	Ireland*	Six Counties	England and Wales	Scotland	Index Numbers (Ireland = 100)

\* Exclusive of the Six Counties.

† Standardised to the 1951 Census population of Ireland\*.

In this country the mortality rate is highest in the age-group 25-34 years but there is not much variation in the rate between the ages 20 and 55 years. In the Six Counties the death rate is highest at ages 45-54 years but at ages above 25 years there is not a great deal of variation with age. In England and Wales the mortality from tuberculosis increases with age (apart from the age group 35-44 years) and the highest rate is at ages 55 years and over. In Scotland the mortality is highest at ages 20-24 years, decreases somewhat to age 35 years and remains practically constant for later age groups. The index numbers show that in each age-group the rate in this country is considerably higher than in any of the other areas.

As already observed there was a considerable decline in the death rate from tuberculosis between 1947 and 1952. Table XVIII shows the average mortality rates from all forms of tuberculosis in the counties in 1945-47 and 1950-52 and also the percentage decreases in the interval.

The average rate declined from 1.22 to 0.69 per 1,000 population in the five years interval, a decline of 43.4 per cent. Each county recorded a substantial decrease in the mortality rate. In 1950-52 the highest rates per 1,000 population were Louth (0.89), Clare (0.85), Waterford Co. Borough (0.84), Limerick County (0.83), Westmeath (0.81) and the lowest rates were Leitrim (0.49), Dun Laoghaire Borough (0.50), Monaghan (0.51).

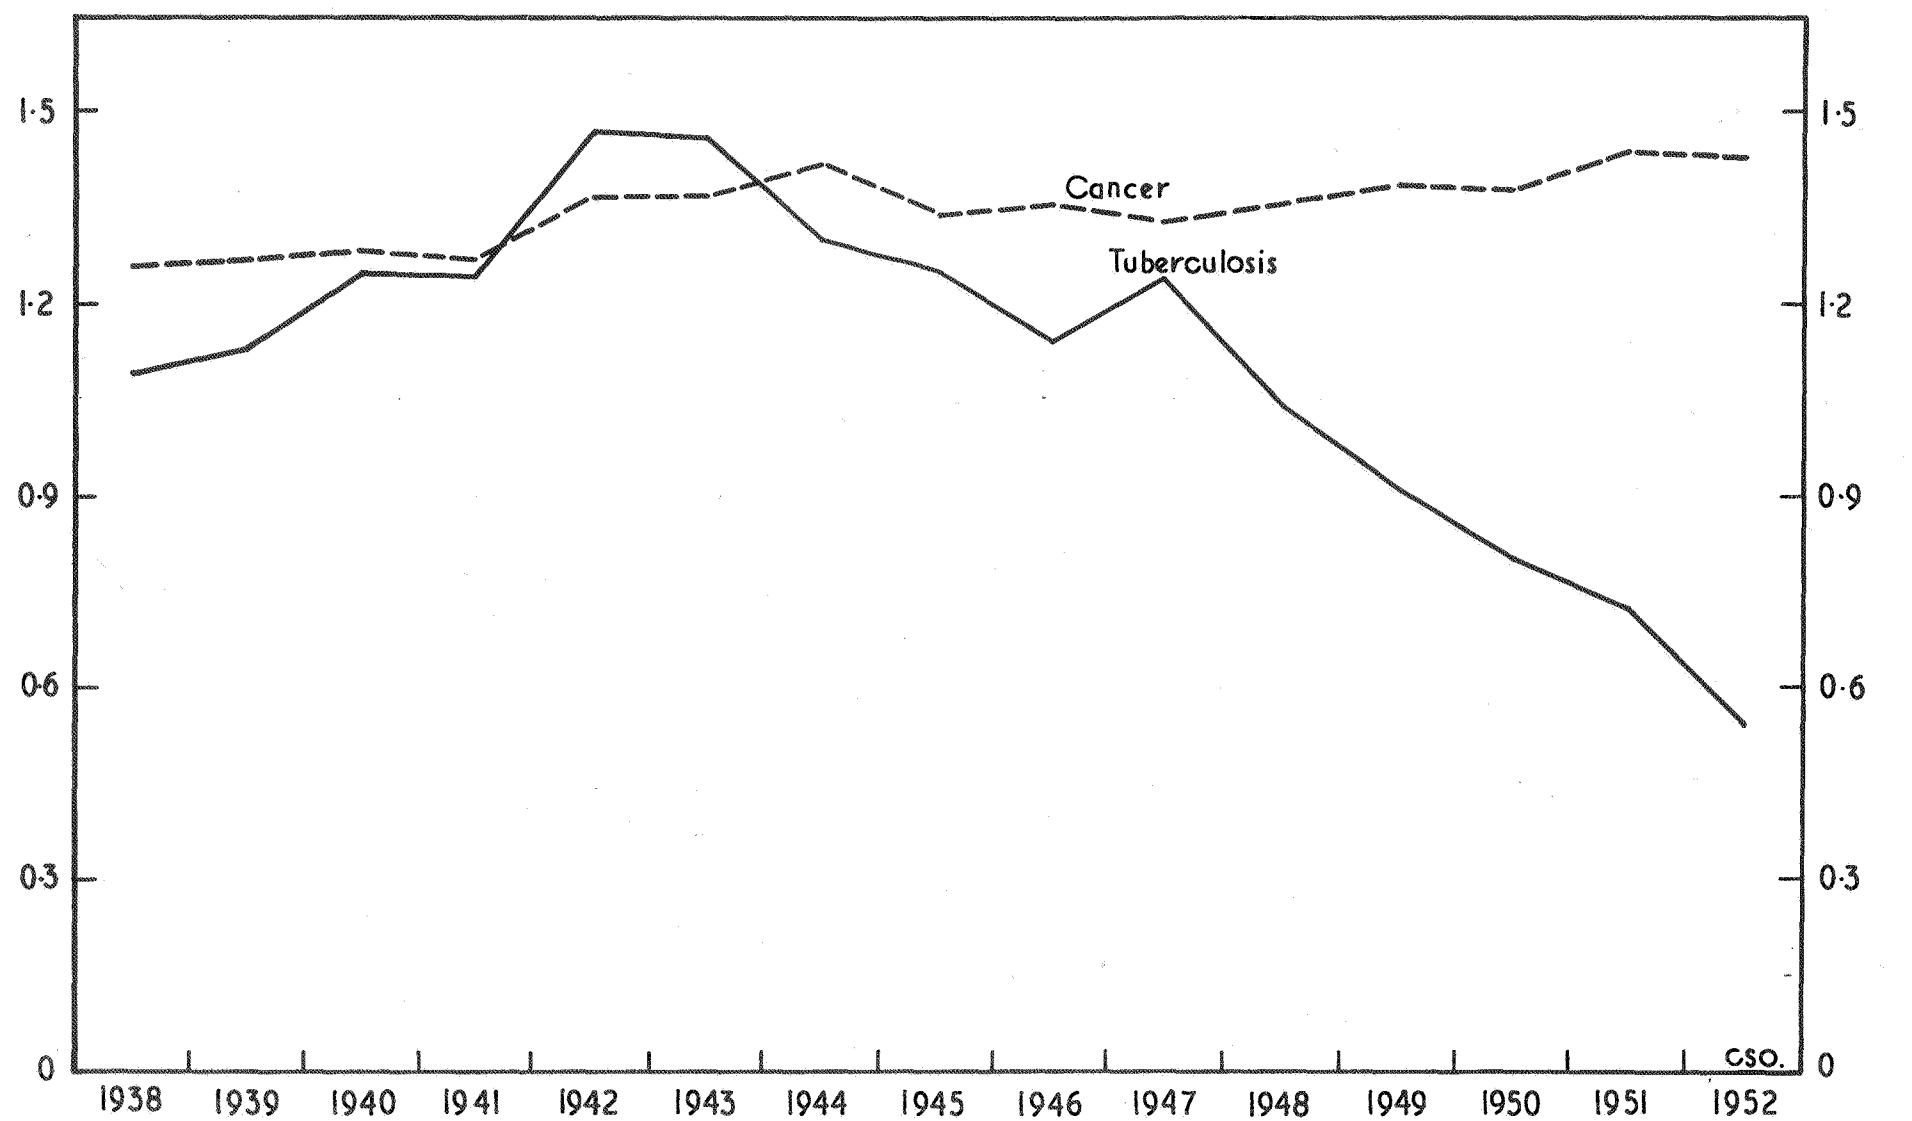

TABLE XVIII

AVERAGE ANNUAL DEATH RATES FROM ALL FORMS OF TUBERCULOSIS PER 1,000 POPULATION  
IN EACH COUNTY AND COUNTY BOROUGH, 1945-47 AND 1950-52

County or County Borough	Crude rate per 1,000 population		Percentage decrease

TOTAL	1.22	0.69	43.4

Diagram 3.

DEATH RATES ( PER 1000 POPULATION ) FROM TUBERCULOSIS AND CANCER 1938-1952.

## Cancer

Up to 1949 cancer deaths were those classified as Nos. 045-055 of the Fifth Revision of the International List of Causes of Death. As already observed since 1950 deaths have been classified according to the Sixth Revision of the International List. It has been recommended by the World Health Organisation that total cancer deaths should be based upon Nos. 140-205 of the International Statistical Classification, 1948, but that for comparability with the past, Nos. 140-205 (excluding Nos. 201 (Hodgkin's disease) and 204 (leukaemia and aleukaemia)) should also be shown.

In 1952 there were 4,357 deaths from malignant neoplasms (Nos. 140-199) and from neoplasms of lymphatic and haematopoietic tissues (Nos. 200-205). Of this number 55 deaths were caused by Hodgkin's disease and 95 by leukaemia and aleukaemia.

Table XIX shows the death rate from cancer in Ireland and neighbouring countries since 1938.

TABLE XIX  
DEATHS FROM CANCER IN IRELAND AND NEIGHBOURING COUNTRIES PER 1,000 POPULATION,  
1938-1952

Year	Ireland*	Six Counties	England and Wales	Scotland
1938	1.26	1.32	1.67	1.62
1939	1.27	1.33	1.66	1.61
1940	1.28	1.36	1.72	1.70
1941	1.27	1.37	1.78	1.69
1942	1.37	1.41	1.83	1.71
1943	1.37	1.45	1.90	1.73
1944	1.42	1.41	1.90	1.86
1945	1.34	1.44	1.74	1.92
1946	1.36	1.42	1.77	1.80
1947	1.33	1.47	1.81	1.77
1948	1.36	1.45	1.86	1.81
1949	1.39	1.45	1.87	1.85
1950	1.38	1.53	1.89	1.88
1951	1.44	1.48	1.90	1.86
1952	1.43	1.47	1.93	1.91

\* Exclusive of the Six Counties

The general increase in the cancer death rate in each area since 1938 will be noted. The rate in Ireland (exclusive of the Six Counties) is the lowest, but this fact can be attributed to some extent at least to the high proportion of uncertified deaths at the older ages in this country. Most of these deaths are described as due to senility and it is almost certain that a considerable proportion of them is caused by cancer. The figures should be accepted with caution as it is not certain that they are comparable over time and between the different areas.

Table XX shows the death rate from cancer in certain age groups for each year since 1938.

The most notable feature of this table is the large increase in the death rate at ages 75 years and over since 1938. It is almost certain that this increase is connected with the fall in the number of uncertified deaths (most of which occur at the old ages) from 16.0 per cent in 1938 to 10.6 per cent in 1952, and to improved certification.

TABLE XX

DEATHS FROM CANCER, CLASSIFIED BY AGE, PER 100,000 POPULATION AT THE SAME AGES  
1938-1952

	<b>TOTAL</b>	8.7	20.5	48.1	160.4	376.7	836.5	1,181.5	159.9	5.1	17.6	74.9	184.1	347.3	563.3	785.8	135.1

There were 2,399 deaths of males and 1,958 deaths of females in 1952. Excluding Hodgkin's disease, leukaemia and aleukaemia, the figures were 2,311 males and 1,896 females. These latter figures are comparable with deaths from cancer prior to 1950. For each sex the site of the malignant neoplasm for about half these deaths was in the digestive organs and peritoneum. Cancer of the stomach and small intestine caused 803 deaths of males and 649 deaths among females. There were 267 deaths of males from cancer of the breast and genito-urinary system and 583 deaths of females. The number of deaths of males from cancer of the respiratory system and from cancer of the buccal cavity and pharynx was more than three times as large as the number of females who died from these diseases.

Table XXII shows the death rate per 100,000 population in each age group for the main groups of sites and it will be observed that there is in general a rapid rise in the death rate with increasing age. Exceptions are cancer of the respiratory system and cancer of the buccal cavity and pharynx for females, in which groups the death rate at 75 years and over is lower than in the preceding age group. The death rate from neoplasms of lymphatic and haematopoietic tissues also decreases at the very old ages for both sexes.

Table XXIII shows the death rates from malignant neoplasms in certain age groups for each county and county borough in 1950-52. Standardised rates which eliminate the effect of different age distributions of the population are shown in the last column.

TABLE XXIII

DEATHS FROM MALIGNANT NEOPLASMS IN CERTAIN AGE GROUPS PER 1,000 POPULATION IN EACH COUNTY AND COUNTY BOROUGH 1950-52

County, etc.	Age groups							All ages: Crude rate	All ages: Standard- ised Rate
	0-24	25-34	35-44	45-54	55-64	65-74	75 and over

ULSTER (part of)	0.03	0.12	0.35	1.45	2.97	5.84	7.69	1.31	1.18
TOTAL	0.03	0.14	0.53	1.63	3.68	6.94	8.98	1.41	1.41

For the whole country the rate increases with age from 0.03 per 1,000 population at ages under 25 years to 8.98 at ages 75 years and over. The crude rate for all ages varies from 1.04 per 1,000 population in Leitrim to 1.84 in Waterford County. In certain counties however, the standardised rates are considerably different from the crude rates and when comparing the relative seriousness of mortality in different counties it is of course the standardised rates which should be used. In the counties of west and north west standardisation lowers the death rates considerably. The rates vary from 0.84 per 1,000 population in Leitrim to 1.95 in Waterford County Borough. The low rates in Connacht and Ulster (part of) can be attributed to the registration of large numbers of uncertified deaths in these counties, most of which are returned as being due to senility or some undefined cause. If these deaths had been medically certified it is probable that a large number would have been certified as being due to malignant neoplasms.

#### **Heart Diseases**

As already observed from Table X111, diseases of the heart caused 284 in every 1,000 deaths in 1952. There were 9,977 deaths from diseases of the heart (Nos. 410-434 of the International List). Of these 2,458 deaths were caused by arteriosclerotic heart disease, including coronary disease, 613 were caused by chronic endocarditis not specified as rheumatic and 5,283 by other myocardial degeneration. There were 380 deaths from chronic rheumatic heart disease and 1,243 deaths from other diseases of the heart.

#### **Respiratory Diseases**

Deaths from respiratory diseases in 1952 numbered 2,459. These include 238 deaths caused by influenza, 979 by pneumonia, 940 by bronchitis and 302 by other respiratory diseases.

#### **Pregnancy, Childbirth and Puerperium**

The number of deaths in this group of causes in 1952 was 92 compared with 103 in 1951. The death rate was 1.42 per 1,000 births.

#### **Accidents, Poisonings and Violence**

The number of deaths from external causes in 1952 was 862 compared with 996 in 1951. Deaths from road transport accidents numbered 239 in 1952 compared with 235 in 1951. In 1952 there were 77 deaths from fire, explosions or burns and 104 deaths from accidental drowning. There were 66 suicides and 376 deaths were caused by other external causes including accidental falls.

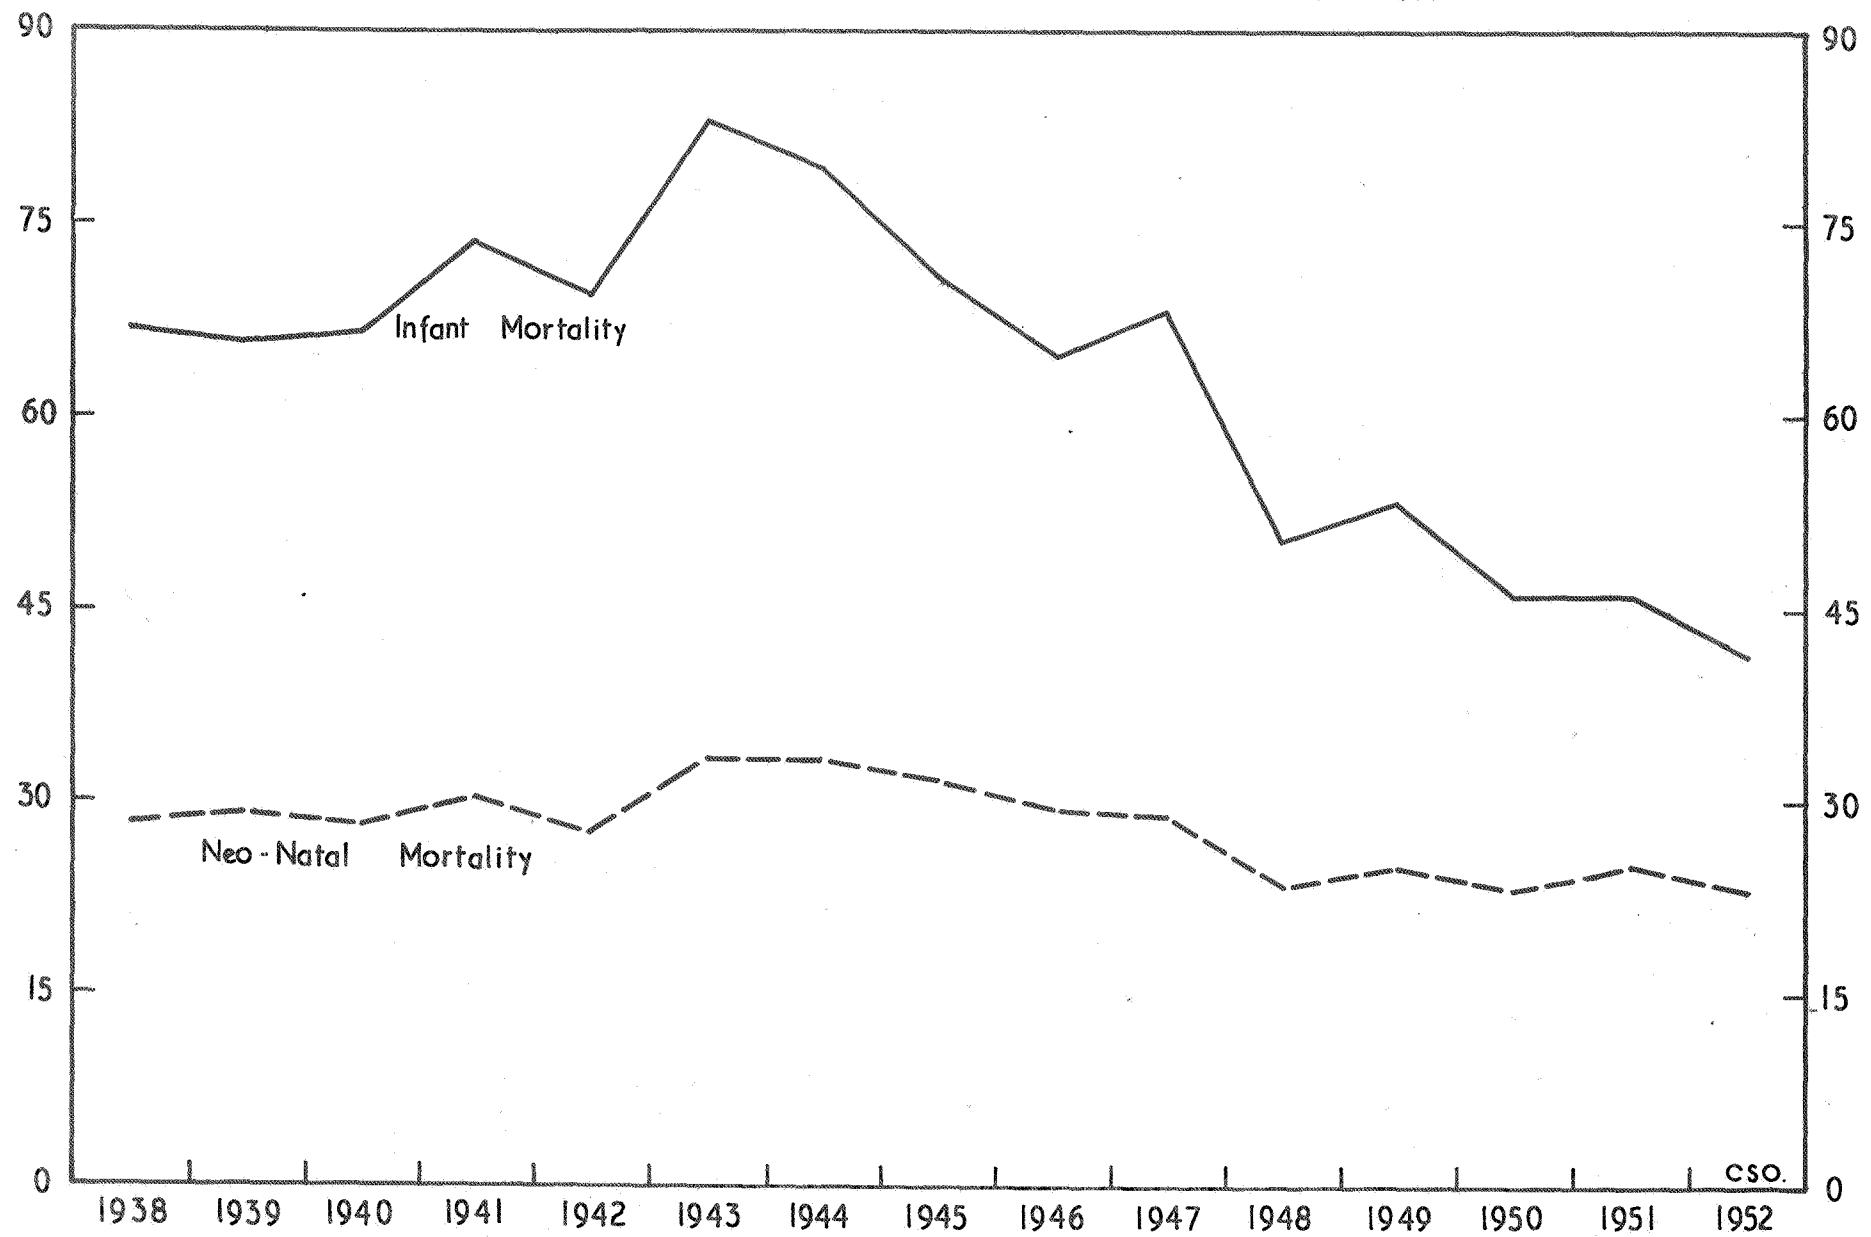

#### **Infant Mortality**

During the year 1952 the deaths of 2,674 infants under 1 year of age were registered compared with 2,876 in the preceding year. The figure for 1952 is equivalent to a rate of 41 per 1,000 live births registered compared with 46 in 1951. The infant mortality rates in neighbouring countries in 1952 were as follows:- England and Wales (28), Scotland (35), and the Six Counties (39). There is still room, therefore, for considerable improvement in the Irish rate. Table 24 shows the deaths under 1 year of age in 1952 classified by cause of death and age at death.

At ages under 4 weeks the main causes of death are congenital malformation, premature birth, injury at birth and other diseases peculiar to the first year of life. At ages 4 weeks to one year the most important single cause of death is pneumonia, but large numbers of deaths are also caused by gastro-enteritis and other diseases peculiar to the first year of life.

Diagram 4.

INFANT AND NEO - NATAL MORTALITY 1938-1952.

Details of causes of death at ages under 4 weeks and at 4 weeks and under 1 year for counties, county boroughs and groups of principal towns are shown in Tables 25 and 27.

Table XXIV shows the infant mortality rates in the counties in 1945-47 and 1950-52 and the percentage decreases in the interval.

TABLE XXIV  
INFANT MORTALITY BY COUNTIES 1945-47 AND 1950-52

County	1945-47	1950-52	% decrease
TOTAL	68	44	35

Mayo	38	35	8
Roscommon	45	36	20
Sligo	65	44	32
CONNACHT	48	38	21
Cavan	56	48	14
Donegal	53	42	21
Monaghan	47	46	2
ULSTER (part of)	52	44	15

The infant mortality rate decreased from 68 to 44 per 1,000 births or by 35 per cent between 1945-47 and 1950-52. In general the largest decreases occurred in those counties which had the highest rates in 1945-47. In three counties the rates declined by less than 10 per cent: these were Kerry and Mayo (8 per cent) and Monaghan (2 per cent). In 1950-52 the highest rate was 59 per 1,000 births in Kilkenny and the lowest was 28 in Leitrim.

Table XV shows the infant mortality rates in 1945-47 and 1950-52 in towns of different size and in the rural districts.

TABLE XXV  
INFANT MORTALITY IN URBAN AND RURAL DISTRICTS

Area	1945-1947	1950-1952	Percentage decline
TOTAL	68	44	35
Dublin Co. Boro' and Dun Laoghaire Boro'	95	45	53
Other Co. Boroughs	77	46	40
Other Principal Towns	68	51	25
Other Urban Districts	68	48	29
Rural Districts	58	43	26

In 1950-52 there was little variation in the infant mortality rate between the different areas in contrast to 1945-47 when the rates in the county boroughs were considerably in excess of those in the smaller urban districts and in the rural districts.

#### Uncertified Causes

The number of cases in 1952 in which the cause of death was not stated to have been certified by a medical practitioner was 3,719 which is 10.6 per cent of the total deaths registered. The proportion for 1951 was 12.2 per cent.

Between 1945-47 and 1950-52 there was little change in the percentage of uncertified deaths as Table XXVI indicates.

TABLE XXVI  
PERCENTAGE OF DEATHS UNCERTIFIED IN EACH COUNTY AND COUNTY BOROUGH

County	1945-47	1950-52
TOTAL	12.7	11.4
Carlow	11.0	11.6
Dublin County Boro'	1.4	1.6
Dublin County	0.1	0.4
Kildare	3.6	3.3
Kilkenny	9.3	7.0
Laoighis	11.3	9.2
Longford	26.1	22.0
Louth	4.0	3.8
Meath	9.4	7.3
Offaly	14.7	12.6
Westmeath	10.4	8.5
Wexford	7.3	5.6
Wicklow	4.8	3.7
LEINSTER	5.4	4.8
Clare	21.3	20.0
Cork County Boro'	0.4	0.1
Cork County	11.1	9.5
Kerry	22.7	22.5
Limerick County Boro'	1.6	2.8
Limerick County	10.7	10.6
Tipperary N.R.	15.0	11.4
Tipperary S.R.	7.2	4.6
Waterford County Boro'	0.5	0.1
Waterford County	7.5	5.2
MUNSTER	11.7	10.6
Galway	25.9	20.7
Leitrim	36.2	31.8
Mayo	27.1	30.3
Roscommon	31.8	27.7
Sligo	20.4	21.4
CONNACHT	27.4	25.9
Cavan	18.6	14.7
Donegal	27.1	22.8
Monaghan	13.1	9.8
ULSTER (part of)	21.7	17.7

The percentage of uncertified deaths fell from 12.7 to 11.4 per cent. This percentage is very high in the west and north west. In 1950-52 the percentage of uncertified deaths was 25.9 per cent in Connacht and 17.7 per cent in Ulster (part of), compared with 10.6 per cent in Munster and 4.8 per cent in Leinster. In Leitrim, Mayo and Roscommon the proportion exceeded one quarter. It is certain that, with such a large proportion of uncertified deaths, the statistics of causes of death in these counties have little value.

#### Inquests and Post-Mortems

The number of deaths registered on certificates issued by coroners, as the result of inquests or post-mortem examinations during 1952 was 1,447 compared with 1,483 for 1951.

# TABLES

TABLE 21 - DEATHS IN EACH COUNTY AND COUNTY BOROUGH IN 1952 CLASSIFIED BY CAUSE AND  
*Note - Deaths are allocated to the area in which deceased normally resided but the place*  
 THE ABBREVIATED LIST OF CAUSES OF DEATH ADOPTED BY THE ARD CHLARAITHEOIR

Code No.	Causes of death	Numbers in Detailed International Classification
1	Tuberculosis of respiratory system	001-008
2	Tuberculosis, other forms	010-019
3	Diphtheria	055
4	Whooping cough	056
5	Meningococcal infections	057
6	Acute poliomyelitis	080
7	Measles	085
8	Other infective and parasitic diseases	020-054, 058-074, 081-084, 086-138
9	Malignant neoplasm of stomach	151
10	Malignant neoplasm of small and large intestine including duodenum	152, 153
11	Malignant neoplasm of rectum	154
12	Other malignant neoplasms of digestive organs and peritoneum	150, 155-159
13	Malignant neoplasm of trachea, bronchus and lung	162, 163
14	Other malignant neoplasms of respiratory system	160, 161, 164, 165
15	Malignant neoplasm of breast	170
16	Malignant neoplasm of uterus	171-174
17	Other malignant neoplasms of genito-urinary system	175-181
18	Other malignant neoplasms	140-148, 190-199
19	Hodgkin's disease and leukaemia and aleukaemia	201, 204
20	Other neoplasms of lymphatic and haematopoietic tissues	200, 202, 203, 205
21	Diabetes	260
22	Cerebral haemorrhage	331
23	Other vascular lesions affecting the central nervous system	330, 332-334

PLACE OF OCCURRENCE AND SHOWING THE NUMBERS OF UNTERTIFIED DEATHS FOR EACH CAUSE  
*of occurrence is not necessarily in the county to which the death has been allocated*  
AND ITS RELATION TO DETAILED INTERNATIONAL CLASSIFICATION

Code no.	Causes of death	Numbers in Detailed International Classification
24	Other diseases of nervous system and sense organs	340-398
25	Chronic rheumatic heart disease	410-416
26	Arteriosclerotic and degenerative heart disease	420-422
27	Other diseases of the heart	430-434
28	Hypertension with heart disease	440-443
29	Hypertension without heart disease	444-447
30	Other diseases of circulatory system	400-402, 450-468
31	Influenza	480-483
32	Pneumonia	490-493
33	Bronchitis	500-502
34	Other diseases of respiratory system	470-475, 510-527
35	Ulcer of stomach and duodenum	540, 541
36	Gastro-enteritis and diarrhoea under 2 years	571.0, 764
37	Nephritis and nephrosis	590-594
38	Hyperplasia of prostate	610
39	Complications of pregnancy, childbirth and the puerperium	640-689
40	Congenital malformations	750-759
41	Diseases of early infancy	760-776 except 764
42	Senility	794
43	Ill-defined causes	780-793, 795
44	Other defined diseases	210-254, 270-326, 530-539, 542-570, 571.1, 572-587, 600-609, 611-637, 690-749
45	Accidents	E800-E962
46	Suicide	E963, E970-E979
47	Other external causes	E964, E965, E980-E999

TABLE 22 ~ DEATHS IN 1952 CLASSIFIED BY PRINCIPAL GROUPS OF CAUSES, SEX AND AGE, FOR EACH COUNTY AND COUNTY BOROUGH

THE PRINCIPAL GROUPS OF CAUSES OF DEATH ADOPTED BY THE ARD CHLARAITHEOIR AND THEIR RELATION TO THE DETAILED INTERNATIONAL CLASSIFICATION

Causes of death	Numbers of Detailed International Classification
Tuberculosis of respiratory system	001-008
Tuberculosis, other forms	010-019
Other infective and parasitic diseases	020-138
Malignant neoplasms	140-199
Vascular lesions affecting central nervous system	330-334
Diseases of the heart	410-434
Other diseases of the circulatory system	400-402, 440-468
Diseases of the respiratory system	470-527
Senility	794
Other diseases	200-326, 340-398, 530-792, 795
Accidents and other external causes	E800-E999

TABLE 22 - DEATHS IN 1952 CLASSIFIED BY PRINCIPAL GROUPS OF CAUSES, SEX AND AGE, FOR EACH COUNTY AND COUNTY BOROUGH

Note - For detailed International List Numbers of causes in each group see page 130
