REPORT ON VITAL STATISTICS FOR THE YEAR 1958

THIS Report has been prepared by the Central Statistics Office for the Minister for Health in accordance with the provisions of Section 2 of the Vital Statistics and Births, Deaths and Marriages Registration Act, 1952. It follows closely the form of the Reports of the Ard-Chláraitheóir for earlier years.

The statistics in this Report relate to the area in Ireland exclusive of the Six Counties.

In this Report births have been assigned to the district containing the normal residence of the parents, and deaths to the district containing the normal residence of the deceased. The number of births shown for each of the years 1943 to 1958 is exclusive of late registrations, and the number of deaths for each of the years 1940 to 1958 is exclusive of non-residents.

The important statistics contained in this Report have already been published, and the Report consists mainly of a breakdown and analysis of these statistics.

GENERAL SUMMARY

Marriages.—There were 15,061 marriages registered during the year 1958 compared with 14,657 in 1957. The marriage rate per 1,000 population was 5·3 compared with 5·1 in 1957.

Births.—The number of births registered during 1958 was 59,510 and the birth rate was 20·9 per 1,000 population, compared with 21·2 per 1,000 population in 1957. The number of illegitimate births registered in 1958 was 976 or 1·6 per cent of all births.

Deaths.—The number of deaths registered during 1958 was 34,248 and the death rate was 12·0 per 1,000 population. In 1957 deaths registered numbered 34,311 and the rate was 11·9.

Of the deaths registered in 1958, 32·1 per cent were stated to be due to heart diseases, 13·7 per cent to malignant neoplasms, 10·8 per cent to vascular lesions affecting the central nervous system and 1·7 per cent to tuberculosis (all forms).

The number of deaths in 1958 from tuberculosis of all forms was 581 and the rate was 0·2 per 1,000 population, compared with 696 deaths and a rate of 0·24 in 1957. There has been a considerable decline in the death rate from tuberculosis since 1947, when it was 1·24 per 1,000 population. The number of deaths from this disease in 1958 was the lowest recorded.

There were 4,501 deaths from malignant neoplasms and neoplasms of lymphatic and haematopoietic tissues (excluding Hodgkin's disease and leukaemia and aleukaemia). This total is comparable with that for "cancer" in the 1949 and earlier Reports. The rate in 1958 was 1·58 per 1,000 population, compared with 1·62 in 1957.

During 1958 the deaths of 2,109 infants under one year were registered, equivalent to a rate of 35·4 per 1,000 live births. This represents an increase on the previous year when 2,027 deaths, equivalent to a rate of 33·1 per 1,000 live births were registered.

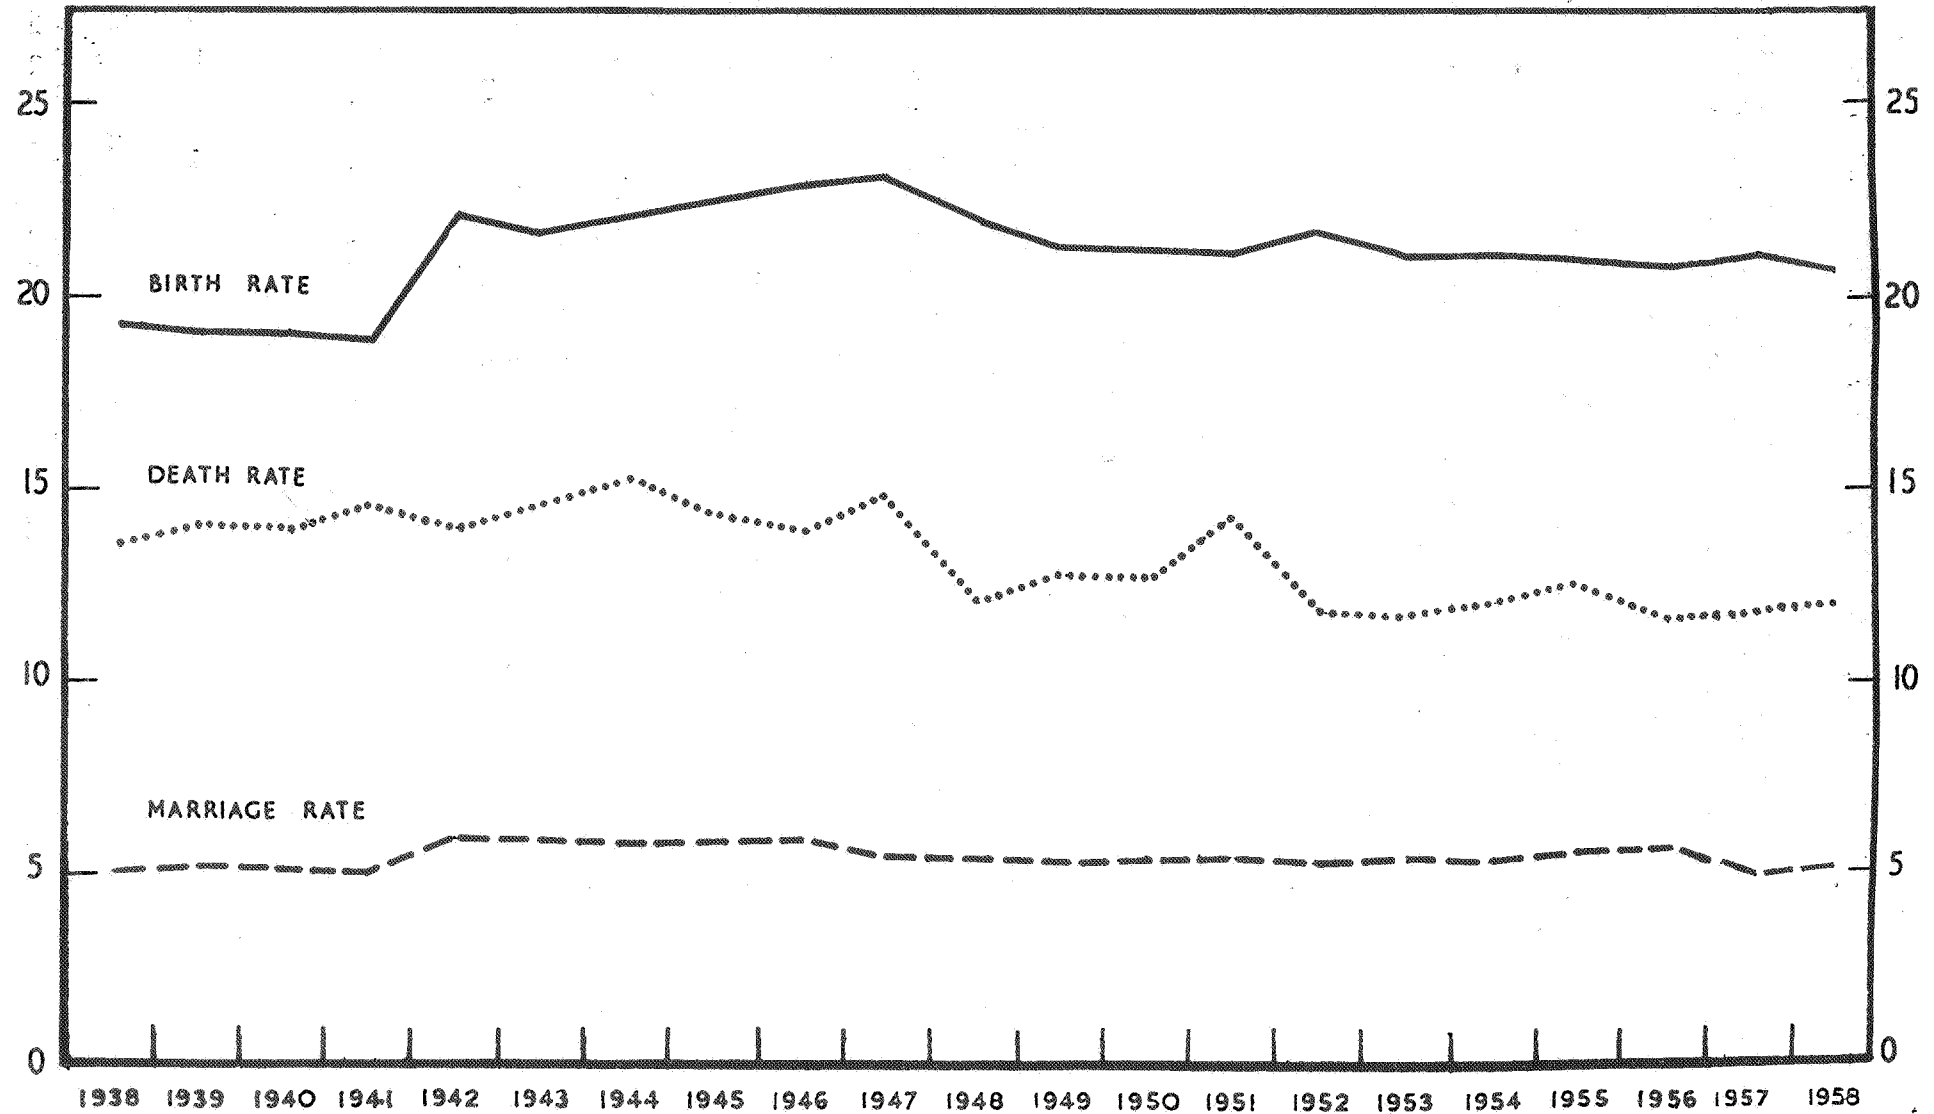

The total number of deaths from accidents and other external causes in 1958 was 940, of which road vehicle accidents accounted for 273.

Marriage, birth and death rates per 1,000 population for the years 1938 to 1958 are illustrated in Diagram I.

Issue of Authority for Registration.—Births and deaths which have not been registered within one year of their occurrence can be registered only on the authority of the Ard-Chláraitheóir. The number of births registered on the authority of the Ard-Chláraitheóir in 1958 was 995 and the number of deaths registered was 196. Throughout the tables in this Report these births and deaths have been excluded.

Population.—The estimated population in April 1958, was 2,853,000.

Diagram I.
BIRTH, MARRIAGE AND DEATH RATES. (PER 1000 POPULATION) 1938-1958.

MARRIAGES

An alteration in the form of the marriage register was made in 1957 with a view to increasing the amount of statistical information available and bringing Irish statistics of marriages into conformity with international recommendations made by the United Nations Organisation. The column of the register headed "Age" was replaced by a column headed "Date of birth" with the result that, whereas up to 1956 the only entries made were "full age" or "minor," the exact age of persons married was now available. In addition a question was asked on "Intended future permanent residence," enabling an examination to be made of the numbers taking up residence in the different parts of the country or going abroad. The classifications of marriages prepared are shown in TABLES 37 to 54.

The number of marriages registered in 1958 was 15,061, representing an increase of 404 on the previous year. Despite this increase the 1958 figure is still low by the standard of recent years. The numbers of marriages registered in the war and immediate post-war years were considerably higher than the recent figures, the greatest number being 17,525 registered in 1946. The 1958 marriage rate at 5.3 per 1,000 population compared with 5.1 in 1957, 5.8 in 1956, 5.6 in 1955 and 5.4 in each of the years 1948 to 1954. TABLES 4 and 5 of this Report show the average numbers of marriages registered and marriage rates for ten year periods since 1864 and by single years since 1941. The following table compares the marriage rate in Ireland in the years 1951 to 1958 with those in the Six Counties, England and Wales and Scotland.

TABLE I
NUMBER OF MARRIAGES PER 1,000 POPULATION IN IRELAND* AND NEIGHBOURING COUNTRIES, 1951-1958

Year	Ireland*	Six Counties	England and Wales	Scotland
1951	5.4	6.8	8.2	8.1
1952	5.4	6.8	8.0	8.0
1953	5.4	6.8	7.8	8.0
1954	5.4	6.6	7.7	8.2
1955	5.6	6.8	8.1	8.4
1956	5.8	6.7	7.9	8.5
1957	5.1	6.7	7.7	8.3
1958	5.3	6.6	7.5	8.0

*Exclusive of the Six Counties

Reductions in the marriage rate occurred in the Six Counties, England and Wales and Scotland between 1957 and 1958, but, in the case of Ireland a slight increase was recorded. The marriage rate in this country each year was appreciably lower than that in the Six Counties which was, in turn, low by comparison with the rates for England and Wales and Scotland.

Age at marriage

Particulars of the ages of persons marrying in this country were obtained at the 1946 Census of Population. At that census persons were asked to state their date of marriage and a special analysis was made of 14,338 marriages which had taken place in the preceding twelve months and in the case of which the husband and wife were enumerated on the same census schedule. Corresponding data have been available since 1957 from marriage registrations and the results obtained from the 1958 marriage registrations make possible an examination of the trends in age at marriage over the twelve year period. That a considerable increase occurred in the proportion of marriages taking place at the younger ages may be seen from the following table.

TABLE II
PERCENTAGE DISTRIBUTION OF MARRIAGES ACCORDING TO AGE OF GROOM AND AGE OF BRIDE IN 1945-46, 1957 AND 1958, AND AVERAGE AGE AT MARRIAGE.

Age group	Age of groom			Age of bride		
	1945-46	1957	1958	1945-46	1957	1958
Under 20 years ..	1.0	1.3	1.3	6.6	6.9	6.6
20 to 24 years ..	14.3	19.7	20.3	29.5	35.1	36.6
25 to 29 years ..	25.7	30.3	30.9	31.1	29.7	29.9
30 to 34 years ..	24.2	20.5	20.3	19.9	15.4	14.8
35 to 44 years ..	25.8	20.8	19.6	11.1	10.4	9.9
45 years and over ..	9.0	7.5	7.6	1.9	2.5	2.2
Total ..	100--	100--	100--	100--	100--	100--
Average Age ..	33.1	31.7	31.5	28.0	27.6	27.4

Whereas, in 1945-46, 59 per cent of the men who married were aged 30 years and over the proportion over this age had fallen to 49 per cent in 1957 and to 47.5 per cent in 1958, the average age of men at marriage declining from 33.1 years in 1945-46 to 31.7 years in 1957 and 31.5 years in 1958. In 1945-46, 32.9 per cent of women marrying were aged 30 years and over, compared with 28.2 per cent in 1957 and 26.9 per cent in 1958, while the average age at marriage declined from 28.0 years in 1945-46 to 27.6 years in 1957 and 27.4 years in 1958. In TABLE 38 the marriages registered in 1958 are shown cross-classified by age of groom and age of bride in single years while in TABLE 39 similar particulars are shown for marriages between bachelors and spinsters. From the latter table it may be calculated that the average ages of bachelors and spinsters marrying in 1958 were 30.7 and 26.9 respectively.

A comparison of marriage rates per 1,000 population by age groups in Ireland in 1958 and in England and Wales in 1957 is made in Table III. The figures for Ireland were obtained by dividing the number of males marrying in each age group by the estimated total number of single or widowed males in that age group and similarly for females. In obtaining the figures for England and Wales divorced persons were also included.

TABLE III

MARRIAGE RATES PER 1,000 POPULATION BY AGE GROUP IRELAND*, 1958 AND ENGLAND AND WALES, 1957

Age groups	Males		Females	
	Ireland* 1958	England and Wales, 1957	Ireland* 1958	England and Wales, 1957
15-19 years	1.3	10.6	8.3	56.6
20-24 years	31.3	154.9	76.4	267.2
25-29 years	71.8	176.8	98.9	170.0
30-34 years	61.7	119.1	75.4	95.9
35-39 years	46.0	73.0	39.9	53.8
40-44 years	31.6	51.9	16.1	35.4
45-49 years	18.4	43.8	7.1	22.7
50-54 years	10.8	32.4	2.4	13.5
55-59 years	5.4	31.2	1.2	7.8
60-64 years	1.2	24.3	0.2	4.9
65 years and over ..		8.4		1.1
Total, 15 years and over	24.2	70.1	26.9	52.4

*Exclusive of the Six Counties

For each sex and age group the marriage rates in Ireland were considerably below those in England and Wales. In the 15-19 year age group the marriage rate in England and Wales was eight times that in Ireland in the case of males and almost seven times that in Ireland in the case of females. In the 20-24 year group the England and Wales rate for males was five times that in Ireland and, for females, three and a half times that in Ireland.

Mode of celebration

The number of marriages celebrated in accordance with the rites and ceremonies of the Catholic Church registered in 1958 amounted to 14,483 (equal to 96.2 per cent of the total) and other marriages numbered 578. In the year 1958 the number of marriages other than Catholic recorded included 389 according to the rites and ceremonies of the Church of Ireland, 91 in Presbyterian Meeting Houses, 32 in Methodist Churches, 17 according to Jewish Rites, 2 according to the usages of the Society of Friends, 2 in registered buildings belonging to other religious denominations and 45 by civil contract in Registrars' Offices.

The number of Catholic marriages recorded during 1958 corresponds to a rate of 5.38 per 1,000 of the estimated Catholic population, this being 0.25 above the rate for the preceding year. The rate for all other marriages in 1958 was 3.55 per 1,000 of all persons other than Catholics in the population, a decrease of 0.75 on the corresponding rate for 1957. Details of marriages registered in each of the years 1951 to 1958 are given in Table IV.

TABLE IV

MARRIAGES REGISTERED IN THE YEARS 1951 TO 1958 ACCORDING TO THE MODE OF CELEBRATION, AND THE RATES PER 1,000 POPULATION FOR CATHOLIC AND ALL OTHER MARRIAGES.

Year	Marriages registered other than Catholic							Catholic marriages registered	Total marriages registered	Rate per 1,000 estimated corresponding population		
	Church of Ireland	Presbyterian	Jewish	Society of Friends	Other religious denominations	In Registrars' Offices	Total			Catholic marriages	All other marriages	Total marriages
1951	570	131	6	2	50	63	822	15,195	16,017	5.44	4.85	5.41
1952	582	147	30	2	32	98	891	14,985	15,876	5.38	5.30	5.38
1953	534	121	15		46	54	770	15,118	15,888	5.44	4.58	5.39
1954	582	121	21	2	41	64	831	15,000	15,831	5.42	4.95	5.38
1955	605	107	25	3	42	67	849	15,594	16,443	5.66	5.10	5.63
1956	483	95	12	4	51	75	720	16,041	16,761	5.87	4.36	5.78
1957	509	97	19	2	30	52	709	13,948	14,657	5.13	4.30	5.08
1958	389	91	17	2	34	45	578	14,483	15,061	5.38	3.55	5.28

Marriages are classified according to form of ceremony, age of groom and age of bride in TABLES 40 and 41. There was little difference between the various religious denominations in respect of average age at marriage in 1958. For Catholic marriages the average age of groom was 31.5 years, compared with 32.2 years for other marriages (including Civil marriages). The average age of bride was 27.4 years for Catholic marriages compared with 27.7 for other marriages.

Social group

A classification which has been widely used in recent years in census of population statistics is that by Social Group. This classification, when applied to a person at work, is determined by his or her occupation, although status (i.e., whether the person is an employer, own-account worker or employee) is also taken into account. The social group of a person not at work is considered to be that of the gainfully occupied person on whom he or she is dependent. The men and women married in 1958 were classified by social group on the basis of the information as to occupation given in the marriage register, and the results obtained are given in TABLES 42 to 44.

TABLE 42 shows men classified by social group and age at marriage, the average age at marriage also being calculated. The average age at marriage of 36.5 years in the "Farmers, relatives assisting and farm managers" social group was appreciably higher than in any of the other social groups, while the lowest average age, of 28.7 years, occurred in the "Semi-skilled manual workers" group. In the case of females the difficulty arises that since many are not gainfully occupied immediately before marriage no statement as to occupation is given, with the result that in many cases no social group code can be assigned. The average age of women at marriage ranged from 31.0 years in the case of the "Employers, and managers (including shopkeepers)" group to 24.8 years in the case of unskilled manual workers, as may be seen from TABLE 43. The average age in the "Farmers, relatives assisting and farm managers" group was not exceptionally high by comparison with some of the other groups. The most striking feature of this table is the much lower average age in the case of the wage earner groups, and particularly the manual workers groups, than among the remaining groups.

TABLE 44 shows marriages registered in 1958 cross-classified by the social groups of groom and bride. Of the women marrying men in the "Farmers, relatives assisting and farm managers" social group, in the case of whom occupation was stated, 40 per cent were in the same social group, 18 per cent in the "Lower professional" group and 32 per cent in the "Clerks and other 'white collar' workers" and the "Non-manual wage earner" groups, while there were small percentages in each of the other social groups. Of the women marrying men in the "Skilled manual worker" group 46 per cent were in the "Clerks and other 'white collar' workers" and the "Non-manual wage earner" groups, 17 per cent were skilled manual workers and 13 per cent were unskilled manual workers, there being smaller percentages in each of the other groups. The distribution, by social group, of women marrying men in each of the remaining social groups may be considered in the same way. Alternatively the table may be examined by considering the social groups of the men marrying the women in each particular social group. Thus it will be seen that only one seventh of the women in the social group "Farmers, relatives assisting and farm managers" married men in social groups other than their own. A substantial number of women in the "Clerks and other 'white collar' workers" group married men in each of the other social groups, but in the case of women in the "Non-manual wage earner" group, the numbers marrying men in the "Higher professional," "Lower professional" or "Salaried employee" groups were relatively small. In the case of the majority of women in the "Skilled," "Semi-skilled" and "Unskilled manual worker" groups the husbands also belonged to these groups or to the "Clerks and other 'white collar' workers" and the "Non-manual wage earner" groups.

Area of residence

Although the marriage registers in use prior to 1957 contained particulars of residence of bride and groom before marriage the difficulties of analysis by clerical methods prevented the information being summarised, and only figures for marriages registered in each area were compiled. Following the alteration in the form of the marriage register in 1957 punched-card summarisation methods were introduced, with the result that four districts may now be considered in relation to each marriage, namely that in which the marriage took place, the areas of residence of the bride and groom prior to marriage, and the intended future residence. In TABLE 37 figures for marriages according to place of occurrence are given for 1958 in the same form as in earlier Reports in this series. A comparison between the area of residence of the bride before the ceremony and the area in which the marriage took place is made for 1958 in Table V.

TABLE V

COMPARISON OF AREA IN WHICH MARRIAGE TOOK PLACE WITH AREA OF RESIDENCE OF BRIDE, 1958

Area in which registered (1)	Total Marriages (2)	Marriages in the case of which bride was resident in		Col. (3) as percentage of col. (2) (5)
		Same area (3)	Other areas* (4)	
Carlow	161	131	30	81.4
Dublin County Borough	4,652	3,646	1,006	78.4
Dun Laoghaire Borough	390	257	133	65.9
Dublin County (remainder)	494	385	109	77.9
Kildare	308	275	33	89.3
Kilkenny	290	240	50	82.8
Laois	174	158	16	90.8
Longford	147	135	12	91.8
Louth	387	346	41	89.4
Meath	279	239	40	85.7
Offaly	213	185	28	86.9
Westmeath	271	204	67	75.3
Wexford	383	354	29	92.4
Wicklow	307	257	50	83.7
Clare	272	232	40	85.3
Cork County Borough	731	427	304	58.4
Cork County	1,060	869	191	82.0
Kerry	448	418	30	93.3
Limerick County Borough	417	196	221	47.0
Limerick County	257	211	46	82.1
Tipperary N.R.	199	175	24	87.9
Tipperary S.R.	279	242	37	86.7
Waterford County Borough	203	149	54	73.4
Waterford County	190	148	42	77.9
Galway	600	525	75	87.5
Leitrim	116	103	13	88.8
Mayo	468	431	37	92.1
Roscommon	206	173	33	84.0
Sligo	218	185	33	84.9
Cavan	226	205	21	90.7
Donegal	512	446	66	87.1
Monaghan	203	173	30	85.2
Total	15,061	12,120	2,941	80.5

*Includes cases in which area of residence of bride was not stated.

In the case of Cork County Borough 58 per cent of the marriages taking place in the city were of women who lived in the city, while for Limerick County Borough this figure was 47 per cent. Compared with the other county boroughs the fraction which marriages of women resident in Dublin represented of the total registered in the city was relatively high, being 78 per cent. In predominantly rural areas only a small proportion of marriages were of women not previously living in the district. Thus of the 448 marriages registered in County Kerry in 1958, only 30 were of women not previously living in the county.

In TABLES 45 and 46 marriages are shown classified by area of residence prior to marriage and age group of groom and bride. Confining attention to these marriages in the case of which the area of residence was within the State, it will be seen that the average age at marriage is appreciably lower in predominantly urban than in rural areas. Thus in the four county boroughs the average age of groom was under 30 years, whereas in the counties of Cavan, Leitrim, Roscommon and Sligo this average age was over 35 years. The average age of women at marriage was under 27 years in the four county boroughs, the borough of Dun Laoghaire and in the counties of Carlow, Dublin, Kildare, Louth, Wexford and Wicklow, while in the counties of Longford, Leitrim, Sligo and Cavan, this average age exceeded 29 years.

TABLE 47 shows marriages cross-classified by area of residence before marriage of groom and bride. As is to be expected, in the great majority of cases the groom and bride were from the same or neighbouring counties. The remarkable feature of the table is the large number of cases in which the address of the groom or bride or both groom and bride was outside the State. Thus 1,141 of the men married in the State in 1958 were returned as residing in England, Wales or Scotland, 225 in the Six Counties and 80 in other countries. The number of brides who were resident before marriage in England, Wales or Scotland was 536, the number from the Six Counties was 107 and the number from other countries was 40. In 572 cases both the groom and bride were from outside the State. In the past it has been the practice to compute marriage rates for counties and county boroughs by relating the marriages registered in each area to the resident population of that area. In Table VI the rates calculated in this way are compared with rates obtained by relating marriages classified by area of residence of groom before marriage to total resident population. It is evident that a more precise comparison of marriage rates between the different counties would be obtained by calculating, for example, marriages of men aged 20 and under 55 years from each county per 1,000 single men aged 20 and under 55 years in that county. However, the absence of the necessary population information from a recent census prevents this being done.

TABLE VI

MARRIAGE RATES PER 1,000 POPULATION OF EACH COUNTY AND COUNTY BOROUGH CALCULATED USING (a) TOTAL MARRIAGES REGISTERED IN EACH AREA AND (b) MARRIAGES OF MEN FROM THAT AREA IN 1958.

Area	Rate (a)	Rate (b)	Area	Rate (a)	Rate (b)
Carlow	4.8	4.7	Clare	3.6	3.8
Dublin County Borough ...	8.8	6.5	Cork County Borough ...	9.3	6.4
Dun Laoghaire Borough ...	8.7	5.2	Cork County	4.2	4.6
Dublin County (remainder) ...	3.8	4.4	Kerry	3.8	3.8
Kildare	4.7	5.3	Limerick County Borough ...	8.3	4.3
Kilkenny	4.6	5.1	Limerick County	3.0	3.9
Laois	3.8	4.3	Tipperary N.R.	3.6	4.3
Longford	4.6	4.1	Tipperary S.R.	3.9	4.0
Louth	5.6	4.9	Waterford County Borough ...	7.1	5.9
Meath	4.2	4.6	Waterford County	4.3	4.4
Offaly	4.2	4.4	Munster	4.7	4.5
Westmeath	5.1	5.2	Galway	3.9	3.9
Wexford	4.5	4.6	Leitrim	3.3	3.9
Wicklow	5.3	4.9	Mayo	3.6	3.6
Leinster	6.4	5.5	Roscommon	3.3	3.8
Cavan	3.8	3.6	Sligo	4.0	3.8
Donegal	4.4	3.6	Connacht	3.7	3.8
Monaghan	4.0	3.7			
Ulster (part of)	4.1	3.6	Total	5.3	4.8

It will be observed that the total rates (a) and (b) differ on account of the fact that marriages of men whose area of residence was outside the country were included in the calculation of rate (a) and excluded from rate (b). The main difference between rates (a) and (b) is in the much lower figures for the county boroughs obtained using the new method of calculation. In the case of the question on intended future permanent residence the accuracy of many of the entries was not as high as for the other information supplied. There were 775 marriages registered in which no information on future residence was provided. Nevertheless the answers to this question revealed that, in a very high proportion of cases, the intended future residence was outside the State. Out of the total of 15,061 marriages registered in 1958 there were 2,247 or 15 per cent where the intended future residence was outside the State. To this might be added a further 58 cases in which, although the question on intended future residence was not answered, the residence of the groom was outside the State. The 2,247 cases referred to above are examined in some detail in TABLES 48 to 54. In the case of 1,711 marriages the future residence was in England and Wales, 208 in the Six Counties, 91 in Scotland, 28 in other parts of Europe,

120 in the United States of America, 37 in Canada, 11 in Australia and New Zealand and 41 elsewhere. The age distributions and average ages of the grooms and brides going to the various countries are shown in TABLES 48 and 49 respectively. It will be seen that the average ages of the men and women marrying and then going abroad were appreciably below those for all marriages in the State. The average ages in the case of men and women going to the Continent of Europe were somewhat lower than those of persons going elsewhere. The marriages of persons going abroad are shown classified by social groups of groom and bride in TABLES 50 and 51 respectively. By comparing TABLES 42 and 50 it is possible to examine the proportions of men marrying in each social group who intended leaving the country, and it is found that this proportion varied widely between the different groups. TABLE VII contains the results obtained.

TABLE VII

PERCENTAGE OF MEN MARRYING IN EACH SOCIAL GROUP WHOSE INTENDED FUTURE RESIDENCE WAS OUTSIDE THE STATE IN 1957 AND 1958.

Social group of groom	Percentage with intended future residence outside the State	
	1957	1958
Farmers, relatives assisting and farm managers ..	% 3	% 3
Farm labourers	5	6
Higher professionals	34	34
Lower professionals	18	15
Employers and managers (including shopkeepers) ..	11	10
Salaried employees	14	18
Clerks and other "white collar" workers	14	14
Non-manual wage earners	14	17
Skilled manual workers	22	23
Semi-skilled manual workers	21	21
Unskilled manual workers	17	21
Total, all groups combined	14	15

A classification of marriages of persons going abroad, by form of marriage ceremony, is made in TABLE 52. By comparison with TABLE 37, it will be seen that the proportions that these represent of all marriages in the State are as shown in the following table :—

TABLE VIII

PERCENTAGE OF MARRIAGES OF EACH DENOMINATION IN THE CASE OF WHICH THE FUTURE RESIDENCE WAS OUTSIDE THE STATE IN 1957 AND 1958.

Form of ceremony	Percentage with intended future residence outside the State	
	1957	1958
Catholic	% 13	% 14
Church of Ireland	25	31
Presbyterian	38	40
Methodist	33	16*
Jewish	32	47*
Civil Marriage	33	24*
Total	14	15

* Percentages based on small numbers.

Finally, in TABLES 53 and 54 the marriages in the case of which the intended future residence is outside the State are shown classified by area of residence before marriage of groom and bride. The proportions which these marriages represent of the total when classified according to area of residence of groom are shown in TABLE IX.

TABLE IX

PERCENTAGE OF MARRIAGES IN 1957 AND 1958, IN THE CASE OF WHICH THE INTENDED FUTURE RESIDENCE WAS OUTSIDE THE STATE, ACCORDING TO AREA OF RESIDENCE OF GROOM BEFORE MARRIAGE.

Area of residence of groom before marriage	Percentage with intended future residence outside the State	
	1957	1958
Dublin County Borough and Dun Laoghaire Borough	11	10
Remainder of Leinster	6	6
Munster	5	5
Connacht	5	5
Ulster (part of)	9	8
Outside the State	89	91

BIRTHS

Under a new system for the collection of statistics of births introduced in 1955 a considerable volume of information dealing with such matters as age of mother at maternity, parity of birth and duration of marriage has become available. These statistics in respect of births registered in 1958 are presented in TABLES 30 to 36.

The number of births registered during the year 1958 was 59,510, the males numbering 30,498 and the females 29,012. Births registered in 1957 numbered 61,242 and in 1956, 60,740. The birth rate in 1958 was 20.9 per thousand population, compared with 21.2 in 1957 and 21.0 in 1956.

TABLE X compares the birth rates in Ireland in the years 1951 to 1958 with those in the Six Counties, England and Wales and Scotland.

TABLE X

NUMBERS OF BIRTHS IN IRELAND* AND BIRTH RATES PER 1,000 POPULATION IN IRELAND* AND NEIGHBOURING COUNTRIES, 1951-1958

Year	Numbers of births (in thousands) Ireland *	Birth rate per 1,000 population			
		Ireland *	Six Counties	England and Wales	Scotland
1951	62.9	21.2	20.7	15.5	17.7
1952	64.6	21.9	20.9	15.3	17.7
1953	62.6	21.2	20.9	15.5	17.8
1954	62.5	21.3	20.8	15.2	18.0
1955	61.6	21.1	20.8	15.0	18.0
1956	60.7	21.0	21.1	15.6	18.5
1957	61.2	21.2	21.5	16.1	19.0
1958	59.5	20.9	21.6	16.4	19.2

* Exclusive of the Six Counties

The birth rate for this country showed a decline in 1958 compared with 1957, whereas in the Six Counties, England and Wales and Scotland slight increases were recorded. In the years 1951 to 1955 the rates for this country were higher than those of any of the neighbouring countries but from 1956 onwards, the Six County rates were highest.

Classification by age at maternity, parity and duration of marriage

In TABLE 35 is shown the total number of births registered in 1958, classified by age of mother at maternity and number of previous live-born children. The number of births in the case of which the mother's age was not stated was 625, or 1.1 per cent of the total, and the number where the parity was not stated was 490 or 0.8 per cent of the total. The results contained in TABLE 35 are summarised in TABLE XI.

TABLE XI

BIRTHS REGISTERED IN 1958 CLASSIFIED BY AGE OF MOTHER AT MATERNITY AND NUMBER OF PREVIOUS CHILDREN

Age at maternity	Number of previous children									
	Total	0	1	2	3	4	5 to 9	10 to 14	15 and over	Not stated
Under 20 years ..	865	657	155	38	15
20-24 years ..	7,665	3,634	2,230	1,097	455	171	74	.	.	4
25-29 years ..	15,408	4,213	4,132	2,904	1,827	1,101	1,203	10	.	18
30-34 years ..	16,939	2,433	3,021	3,222	2,711	1,863	3,461	194	2	32
35-39 years ..	13,034	1,071	1,315	1,699	1,984	1,795	4,516	584	27	43
40-44 years ..	4,607	210	310	421	549	615	1,960	480	50	12
45 years and over ..	367	4	17	28	25	42	184	62	5	.
Not stated ..	625	86	29	29	23	23	47	7	.	381
Total ..	59,510	12,308	11,209	9,438	7,589	5,610	11,445	1,337	84	490

In preparing this table the procedure in the case of multiple births was to count each child as an individual birth. For instance if a fifth pregnancy produced twins the children would be classified as a fifth and sixth child in parity order.

There was little change from 1957 to 1958 in the distribution of births according to age of mother at maternity, as may be seen from Table XII in the calculation of which only those births where the age was stated are, of course, included. This table also illustrates the striking difference between this country and England and Wales and Scotland in respect of the distribution ages of mothers at maternity.

TABLE XII

PERCENTAGE DISTRIBUTION OF BIRTHS ACCORDING TO AGE OF MOTHER AT MATERNITY IN IRELAND* IN 1957 AND 1958, AND IN ENGLAND AND WALES AND SCOTLAND IN 1957

Age at maternity	Ireland*		England and Wales (1957)	Scotland (1957)
	1958	1957		
Under 20 years ..	1.5	1.7	5.7	5.2
20-24 years ..	13.0	13.2	29.2	29.9
25-29 years ..	26.2	25.6	31.9	31.5
30-34 years ..	28.8	28.9	19.9	19.9
35-39 years ..	22.1	21.6	10.4	10.6
40-44 years ..	7.8	8.4	2.7	2.7
45 years and over ..	0.6	0.6	0.2	0.2
Total ..	100--	100--	100--	100--
Average age at maternity	31.7	31.6	27.9	28.0

*Exclusive of the Six Counties

The difference between this country and England, Wales and Scotland shown by Table XII arises due to the facts that (a) women in Ireland marry at a later age and (b) married women in Ireland have on the average a larger number of children and so continue bearing children for a greater number of years. When attention is confined to legitimate first births, in order to eliminate the effect of factor (b), the difference remains very pronounced (as may be seen from the Report for the year 1955 in this series).

Fertility rates in Ireland in 1958 and in England and Wales in 1957 are compared in Table XIII.

TABLE XIII

BIRTHS PER 1,000 WOMEN IN EACH AGE GROUP, IRELAND*, 1958 AND ENGLAND AND WALES, 1957

Age of mother at maternity	Legitimate and illegitimate births (all women)		Legitimate births per 1,000 married women		Illegitimate births per 1,000 single, widowed and divorced women	
	Ireland*	England and Wales	Ireland*	England and Wales	Ireland*	England and Wales
15-19 years ..	8.0	29.7	656.8	415.3	2.4	5.2
20-24 years ..	92.5	152.6	473.3	263.0	5.4	16.8
25-29 years ..	192.5	157.3	410.8	187.1	4.3	26.2
30-34 years ..	206.6	91.4	312.3	100.9	3.3	26.3
35-39 years ..	148.5	46.5	208.8	51.3	2.0	16.6
40-44 years ..	52.0	12.2	71.6	13.5	0.5	5.0
45-49 years ..	4.4	0.8	6.4	0.9		0.3
Total, 15-49 years	95.9	67.6	199.0	91.5	3.0	10.9

*Exclusive of the Six Counties

In each age group the number of legitimate births per 1,000 married women was considerably higher in Ireland than in England and Wales. In the 15-19 year group the Irish rate was almost 60 per cent above that in England and Wales, in the 20-24 year group 80 per cent greater, while the excess in the Irish rate rose steadily with increasing age. The number of illegitimate births per 1,000 single, widowed or divorced women was appreciably lower at all ages in Ireland than in England and Wales. On account of the much higher proportion of women married at the younger ages in England and Wales the fertility rates for all women combined was higher in England and Wales than in Ireland in the 15-19 and 20-24 year groups, but at the later ages the Irish rate was considerably higher.

The percentage distribution of births according to the number of previous children in 1957 and 1958 is shown in Table XIV and a comparison made with the corresponding distributions in England and Wales and Scotland. The correspondence is not exact since the England and Wales figures relate to legitimate maternities to women married only once, while the figures for Scotland refer to all legitimate births and to previous live or stillborn children. The Irish figures include illegitimate births, whereas, if these had been excluded, the contrast with England and Wales and Scotland would have been still more pronounced.

TABLE XIV

PERCENTAGE DISTRIBUTION OF BIRTHS ACCORDING TO NUMBER OF PREVIOUS CHILDREN IN IRELAND* IN 1957 AND 1958 AND IN ENGLAND AND WALES AND SCOTLAND IN 1957

Number of previous children	Ireland *		England and Wales (1957)	Scotland (1957)
	1958	1957		
0	20.9	21.2	40.2	36.6
1	19.0	18.5	29.8	28.2
2	16.0	16.0	15.0	16.1
3	12.9	12.8	7.2	8.5
4	9.5	9.7	3.6	4.7
5 to 9 ..	19.4	19.4	4.0	5.6
10 to 14 ..	2.3	2.3	0.2	0.3
15 and over ..	0.1	0.1	0.0	0.0
Total ..	100.0	100.0	100.0	100.0

*Exclusive of the Six Counties

The difference between the years 1957 and 1958 in respect of the percentage distribution according to number of previous children was very slight. The percentage of women with large families was considerably higher in Ireland than in England and Wales or Scotland. Thus, in Ireland in 1957, 19.4 per cent of the mothers had 5 to 9 previous children, the corresponding percentages being only 4.0 in England and Wales and 5.6 in Scotland.

In TABLE 34 legitimate births are classified by age of mother at maternity and duration of marriage, while in TABLE 36 a similar classification is done in respect of legitimate first births. The results contained in TABLE 36 are summarised in Table XV.

TABLE XV

LEGITIMATE FIRST BIRTHS REGISTERED IN 1958 CLASSIFIED BY AGE OF MOTHER AT MATERNITY AND DURATION OF MARRIAGE

Age at maternity	Duration of marriage (in years)								
	Total	Under 1	1-2	3-4	5-9	10-14	15-19	20 and over	Not stated
Under 20 years	423	312	106	1	4
20-24 years	3,346	1,696	1,550	76	21	.	.	.	3
25-29 years	4,086	1,632	2,081	253	106	11	.	.	3
30-34 years	2,377	764	1,142	232	189	36	8	.	6
35-39 years	1,045	233	499	116	128	40	22	4	3
40-44 years	204	26	73	40	29	17	13	6	.
45 years and over	4	.	1	2	.	1	.	.	.
Not stated	37	6	10	.	2	.	.	.	19
Total	11,522	4,669	5,462	720	475	105	43	10	38

It will be seen that only about 1 per cent of first births occurred at durations of marriage of over 10 years, and only 12 per cent occurred at durations of over 3 years. Over thirty-five per cent of first births (excluding cases with age not stated) were to mothers in the age group 25-29 years, while almost 11 per cent were to mothers aged 35 years or over.

Multiple births

The number of infants born alive in multiple births registered in 1958 was 1,761, consisting of 873 pairs of twins and 5 sets of triplets.

DEATHS

The number of deaths registered during the year 1958 was 34,248 of which 18,495 were those of males and 15,753 those of females. This is equivalent to a rate of 12.0 deaths per 1,000 total population, compared with 11.9 in the previous year and 11.7 in 1956.

In Table XVI are shown the average annual death rates, by age group, for decennial periods since the beginning of this century, and for single years from 1951 to 1958.

TABLE XVI

AGE SPECIFIC DEATH RATES PER 1,000 POPULATION FOR DECENNIAL PERIODS 1901-1950 AND EACH YEAR FROM 1951-1958

Period	Age groups												Crude rate per 1,000 population
	Under 5	5-9	10-14	15-19	20-24	25-34	35-44	45-54	55-64	65-74	75-84	85 and over

While the crude death rate per 1,000 population has shown a gradual downward trend since the beginning of the century, striking falls have occurred in the death rates at the younger ages, and the improvement has been greatest in the most recent years. In the age groups above 65 years little change has occurred in the death rates since the period 1901-1910.

Table XVII compares the death rates in the years 1951-58 with those in the Six Counties, England and Wales and Scotland. In general the death rate in this country is somewhat higher than those in England and Wales and the Six Counties and is of about the same order as that in Scotland.

TABLE XVII

DEATH RATES PER 1,000 POPULATION IN IRELAND* AND NEIGHBOURING COUNTRIES, 1951-1958

Year	Numbers of deaths (thousands) Ireland *	Death rate per 1,000 population			
		Ireland *	Six Counties	England and Wales	Scotland
1951	42.4	14.3	12.8	12.5	12.9
1952	35.1	11.9	10.8	11.3	12.0
1953	34.6	11.7	10.7	11.4	11.5
1954	35.5	12.1	10.9	11.3	12.0
1955	36.8	12.6	11.1	11.7	12.0
1956	33.9	11.7	10.6	11.7	12.0
1957	34.3	11.9	10.9	11.5	11.9
1958	34.2	12.0	10.8	11.7	12.0

*Exclusive of the Six Counties

Comparison between counties

A difficulty arises when comparisons are made between the death rates in different regions of the country, due to the fact that the age distribution of the population varies considerably from one county to another. Thus, if a particular county contains a large proportion of elderly persons the crude death rate per 1,000 population will be relatively high even if the health conditions in that county are better than the general average. To overcome this difficulty standardised death rates are prepared, as follows :—

For each county the death rate in each age group is calculated by dividing the deaths of persons whose normal residence was in that county in each age group by the corresponding population. By multiplying the death rate in each age group by the total population in the whole country in that age group and summing the resulting products, an estimate is obtained of the number of deaths to be expected in the whole country, if the rates in the county under investigation applied generally. This "expected number" of deaths is divided by the total population of the country to give the county standardised death rate.

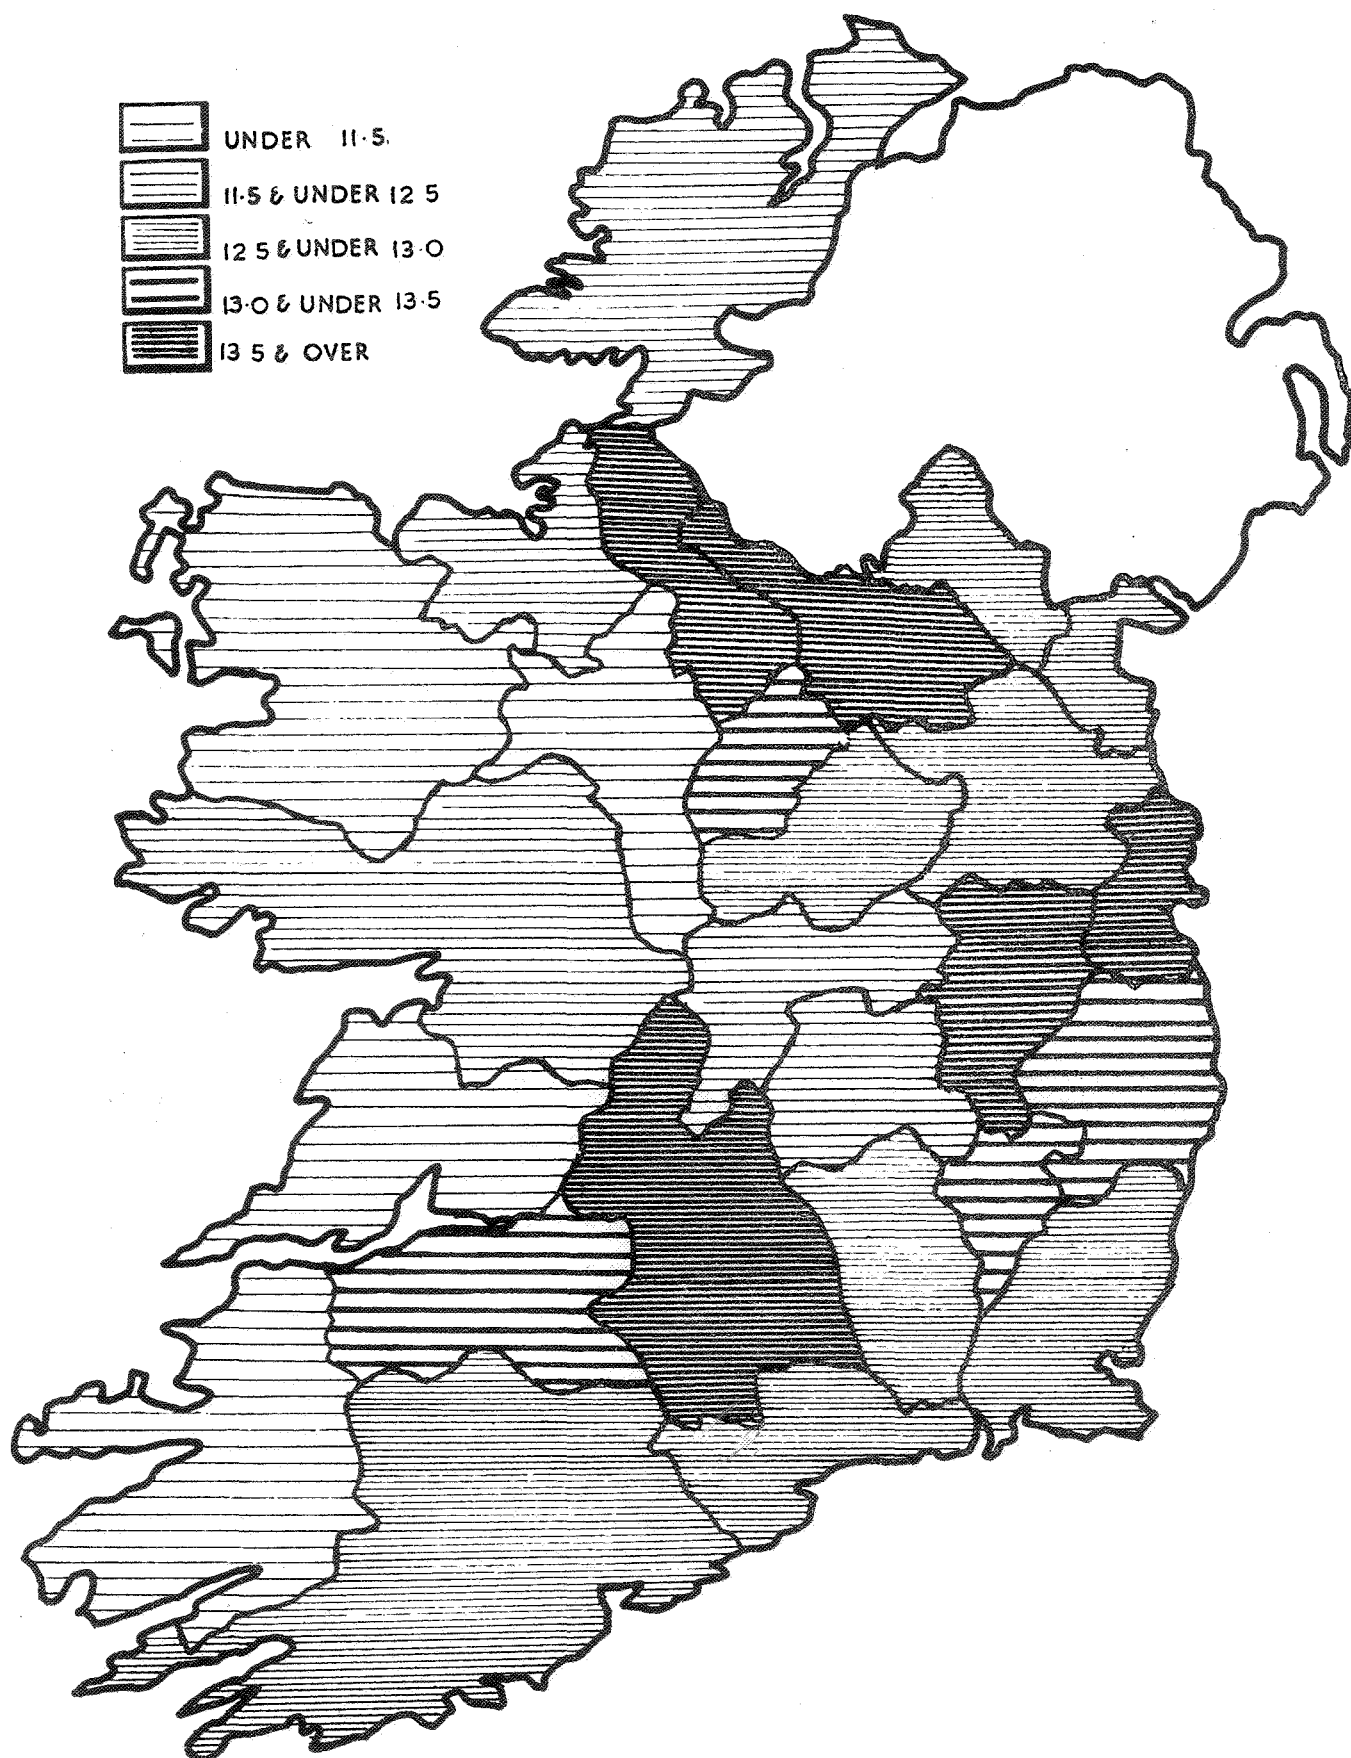

Table XVIII shows the crude and standardised death rates for each county and county borough in 1958.

TABLE XVIII

CRUDE AND STANDARDISED DEATH RATES IN EACH COUNTY AND COUNTY BOROUGH IN 1958

Area	Deaths per 1,000 population	
	Crude	Standardised
Total	12.00	12.00
Carlow	12.24	13.23
Dublin County Borough	10.26	14.08
Dun Laoghaire Borough	11.18	12.50
Dublin County (remainder)	8.12	12.56
Kildare	10.56	13.68
Kilkenny	12.50	12.71
Laois	12.41	12.08
Longford	14.56	13.28
Louth	11.23	12.98
Meath	11.56	12.78
Offaly	11.31	12.17
Westmeath	12.39	12.80
Wexford	12.69	12.84
Wicklow	11.80	13.19
Leinster	10.90	13.20
Clare	12.53	11.04
Cork County Borough	13.31	15.96
Cork County	12.69	12.12
Kerry	12.27	11.26
Limerick County Borough	10.16	14.19
Limerick County	13.16	13.13
Tipperary N.R.	13.94	14.13
Tipperary S.R.	13.98	14.31
Waterford County Borough	11.24	13.64
Waterford County	12.84	12.18
Munster	12.72	12.67
Galway	11.95	11.68
Leitrim	17.30	13.92
Mayo	13.05	10.73
Roscommon	13.23	10.76
Sligo	13.95	11.98
Connacht	13.15	11.47
Cavan	15.03	13.60
Donegal	13.30	11.94
Monaghan	12.60	12.70
Ulster (part of)	13.60	12.54

Diagram 2

STANDARDISED DEATH RATES (PER 1,000 POPULATION)
FROM ALL CAUSES 1958

In certain areas the standardised rates differ appreciably from the crude rates. Leinster, which had the lowest crude death rate among the provinces in 1958, had the highest standardised rate. The standardised death rates in 1958 were lowest in the counties of Mayo, Roscommon, Clare and Kerry and highest in the County Boroughs of Cork, Limerick and Dublin, and the North and South Ridings of Tipperary.

The standardised death rate for each county is illustrated in Diagram 2.

Causes of death

The tables in this Report showing cause of death are based on the Seventh Revision of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1955, prepared by the World Health Organisation. The Seventh Revision was used for the first time in classifying deaths by causes in this Report. From 1940 to 1949 the Fifth Revision was used, and the Reports for the years 1950 to 1957 were based on the Sixth Revision.

Table XIX shows the deaths and death rates in each of the years 1956 to 1958 from some of the principal groups of causes and the average numbers and rates for these causes in the periods 1935-37, 1945-47, 1950-52 and 1953-55.

TABLE XIX

NUMBERS OF DEATHS AND DEATH RATES FROM PRINCIPAL CAUSES 1935-37, 1945-47, 1950-52, 1953-55, AND EACH YEAR 1956, 1957 AND 1958

Causes	1935-37	1945-47	1950-52	1953-55	1956	1957	1958

All causes	1,451.0	1,447.0	1,297.4	1,216.4	1,170.0	1,189.3	1,200.4

The death rate from tuberculosis (all forms) in 1958 was less than one-sixth of its level in the periods 1935-37 and 1945-47. Deaths from cancer, although lower in 1958 than in 1957, show a gradual but steady increase in number, and represented 13.7 per cent of all deaths registered in 1958, compared with 8.4 per cent in 1935-37. The death rate from vascular lesions affecting the central nervous system has shown an increase of almost 64 per cent from 1935-37 to 1958. A substantial increase in the death rate from diseases of the heart took place between 1935-37 and 1945-47, but since then practically no change has occurred. Other diseases of the circulatory system have, however, accounted for a steadily increasing number of deaths, the death rate from these causes in 1958 being more than double its level in 1935-37. The number of deaths due to influenza shows considerable variation from year to year, while the number of deaths from other diseases of the respiratory system has declined fairly steadily being, in 1958, less than half the figure in 1935-37. In each period a large number of deaths were stated to be due simply to senility, although a considerable reduction in this number has occurred over the twenty year interval (6,176 in 1935-37 compared with 2,631 in 1958). This reduction is largely explained by an increasing accuracy of certification of cause of death as well as a falling proportion of deaths which are not medically certified. The question of medical certification is discussed in a later section, but it will be realized that the accuracy of the comparisons made in this table is appreciably reduced by the fact that many of the deaths are not medically certified.

Deaths registered in 1958, classified by sex, age group and cause are shown in TABLE 19 of this Report, the Detailed International List of Causes of Death being used. In Table XX the principal causes of death in each age group are examined.

TABLE XX
PROPORTIONS OF DEATHS FROM PRINCIPAL CAUSES IN CERTAIN AGE GROUPS IN 1958

Diseases of the heart caused the largest proportion of all deaths, namely 321 in every 1,000 deaths. Next in order were malignant neoplasms (137), vascular lesions affecting the central nervous system (108) and senility without psychosis (77). At ages under one year congenital malformations, birth injuries and diseases peculiar to early infancy accounted for 747 out of every 1,000 deaths. At ages one to 4 years, pneumonia was the principal cause of death, accounting for 158 per 1,000 deaths at these ages, while accidents, etc., caused 175 deaths and tuberculosis (all forms) 60 deaths. The proportion of deaths caused by tuberculosis increases considerably in the young adult age groups. At ages 15-24 years, 53 out of every 1,000 deaths were caused by this disease, while at ages 25-34 years the proportion of deaths due to tuberculosis rose to 155 per 1,000 deaths. At ages 35-44 years tuberculosis was still one of the major causes of death, accounting for 89 per 1,000 deaths at these ages. The principal causes of death at ages 35-44 years were malignant neoplasms (233 per 1,000 deaths) and diseases of the heart (183 per 1,000 deaths). Between the ages of 45 and 74 years diseases of the heart, malignant neoplasms and vascular lesions affecting the central nervous system were the principal causes of death.

Some of the principal causes of death are considered in greater detail in the following sections.

Tuberculosis

Table XXI shows the number of deaths and the death rate per 1,000 population for each of the years 1951 to 1958.

TABLE XXI
NUMBERS OF DEATHS AND DEATH RATES PER 1,000 POPULATION FROM TUBERCULOSIS OF THE RESPIRATORY SYSTEM AND FROM ALL OTHER FORMS OF TUBERCULOSIS, 1951-1958

Year	Tuberculosis of the respiratory system		Other forms of tuberculosis		Ratio of male to female mortality	
	Number	Rate per 1,000 population	Number	Rate per 1,000 population	Tuberculosis of respiratory system	Other forms of tuberculosis
1951	1,712	0.58	450	0.15	1.22	1.23
1952	1,207	0.41	372	0.13	1.45	1.27
1953	911	0.31	276	0.09	1.52	1.09
1954	797	0.27	208	0.07	1.59	0.93
1955	729	0.25	160	0.05	1.38	1.12
1956	562	0.19	127	0.04	1.81	1.31
1957	583	0.20	113	0.04	1.92	1.35
1958	502	0.18	79	0.03	1.80	1.93

In 1958 there were 581 deaths from tuberculosis of which 502 were caused by the respiratory form and 79 by other forms of the disease. There has been a marked reduction in the number of deaths, both from tuberculosis of the respiratory system and other forms, in a comparatively recent period; the number of deaths in 1958 was the lowest recorded, showing a fall of 73 per cent since 1951. The trend in the death rate from tuberculosis (all forms) since 1938 is shown in Diagram 3.

In Table XXII tuberculosis death rates are examined, by age groups, for a number of different periods.

TABLE XXII
DEATH RATES FROM ALL FORMS OF TUBERCULOSIS AT DIFFERENT AGES PER 1,000 CORRESPONDING POPULATION IN THE PERIODS 1935-37, 1945-47, 1950-52 AND IN EACH YEAR 1953 TO 1958

Period	Under 15	15-19	20-24	25-34	35-44	45-54	55 and over	All ages

Diagram 3

DEATH RATE (PER 1,000 POPULATION) FROM TUBERCULOSIS & CANCER 1939-1958

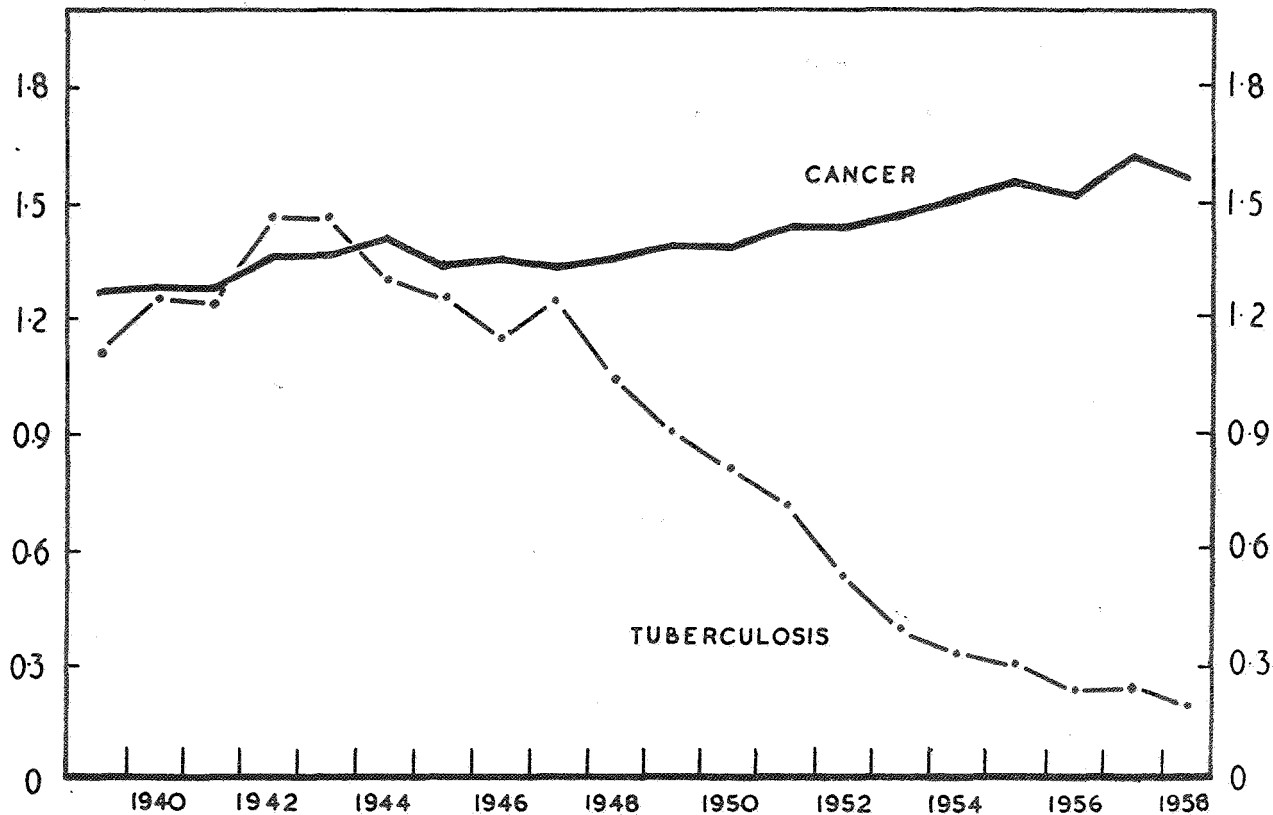

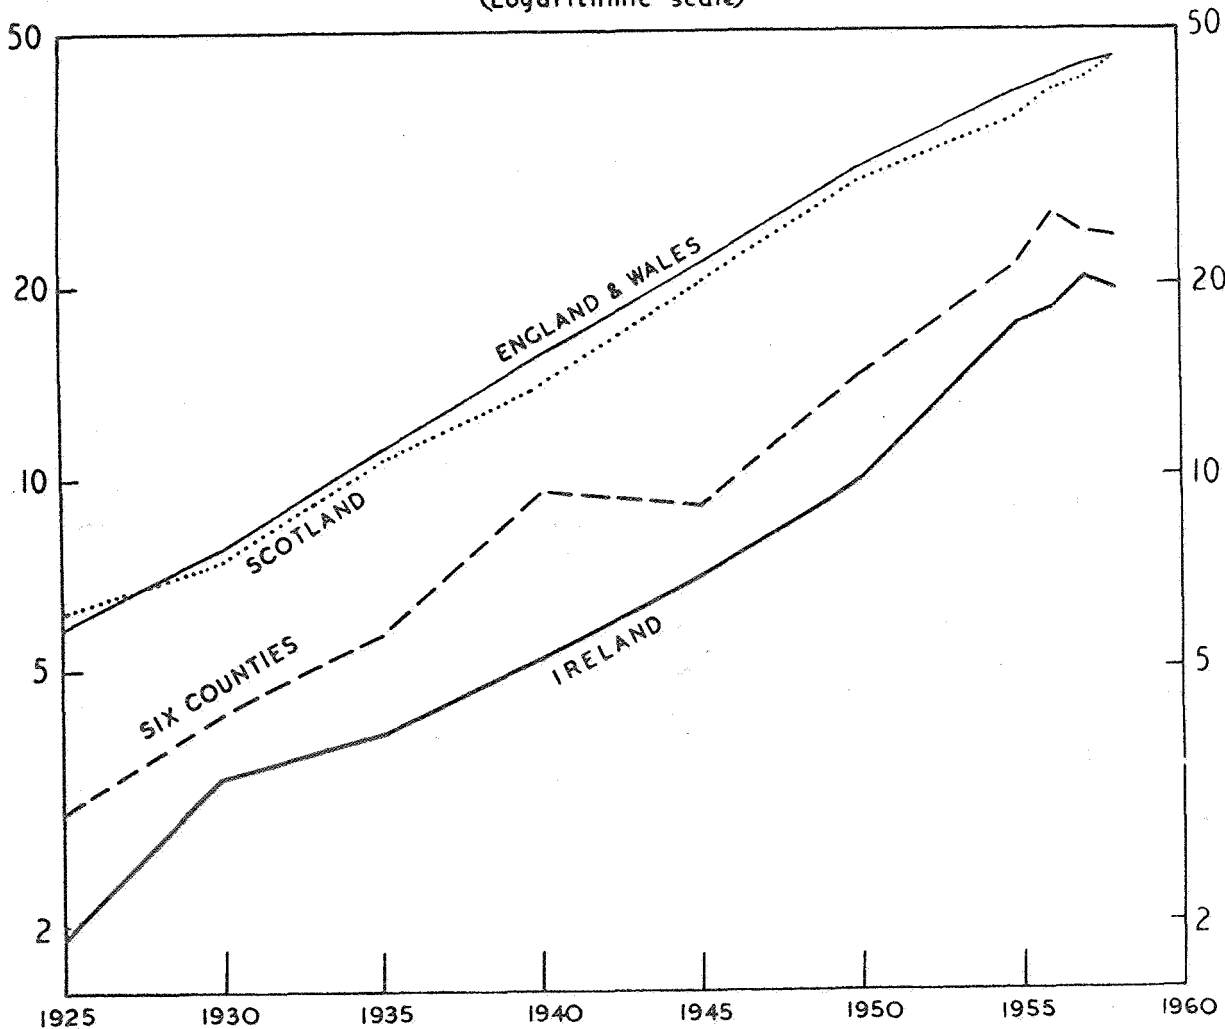

Diagram 4

DEATH RATES FROM LUNG CANCER (Nos.161-165) PER 100,000 POPULATION (Logarithmic scale)

There was little change, either in the overall death rate or in the rates for individual age groups between the periods 1935-37 and 1945-47. By 1950-52, however, the death rates in the younger age groups were roughly halved, while in the most recent years the death rates for these age groups were only a fraction of their level in 1945-47. Thus, between 1945-47 and 1958 the death rate in the age group under 15 years was reduced by 94 per cent, in the group 15 to 19 years by 98 per cent and in the group 20 to 24 years by 98 per cent. In the group 55 years and over the reduction in the death rate was less marked, amounting to 43 per cent.

The death rates from tuberculosis in the years 1951 to 1958 in this country are compared with those in the Six Counties, England and Wales and Scotland in Table XXIII.

TABLE XXIII
DEATHS PER 1,000 POPULATION FROM TUBERCULOSIS (ALL FORMS) IN IRELAND* AND NEIGHBOURING COUNTRIES, 1951-1958

Year	Ireland *	Six Counties	England and Wales	Scotland
1951	0.73	0.45	0.32	0.43
1952	0.54	0.30	0.24	0.32
1953	0.40	0.23	0.20	0.26
1954	0.34	0.18	0.18	0.22
1955	0.30	0.15	0.15	0.19
1956	0.24	0.12	0.12	0.16
1957	0.24	0.13	0.11	0.14
1958	0.20	0.11	0.10	0.13

* Exclusive of the Six Counties

Throughout the period the death rate from tuberculosis has been higher in Ireland than in the neighbouring countries. The striking feature of this table, however, is the extent to which Ireland, in which mortality from tuberculosis has for many years been heavier than in other countries, has shared in the general improvement.

The mortality from tuberculosis in the counties and county boroughs in 1958 is compared in TABLE 12 of this Report. The highest death rates per 1,000 population from tuberculosis (all forms) were in Tipperary S.R. (0.40), Limerick County Borough (0.36), Cork County Borough (0.35) and Leitrim (0.34) while the lowest rates were in Meath (0.09), Sligo (0.09), Mayo (0.12), Tipperary N.R. (0.13) and Roscommon (0.13).

Cancer

Up to 1949 cancer deaths were those classified as Nos. 045 to 055 of the Fifth Revision of the International List of Causes of Death, while in the years 1950 to 1956, deaths have been classified according to the Sixth Revision. The 1957 and current Reports are based on the Seventh Revision of the International List. It has been recommended by the World Health Organisation that total cancer deaths should be based upon Nos. 140 to 205 of the International Statistical Classification, 1948, but that for comparability with years prior to 1950 Nos. 140 to 205, excluding Nos. 201 (Hodgkin's disease) and 204 (Leukaemia and aleukaemia) should also be shown.

In 1958 there were 4,682 deaths from cancer (Nos. 140 to 205). Of this number, 58 deaths were caused by Hodgkin's disease and 123 by leukaemia and aleukaemia.

Table XXIV shows the death rate from cancer in certain age groups in the years 1951 to 1958.

TABLE XXIV
DEATHS FROM CANCER (Nos. 140-205) CLASSIFIED BY SEX AND AGE PER 100,000 POPULATION AT THE SAME AGES, 1951 TO 1958

Year	Age group (years)							Total
	Under 25	25-34	35-44	45-54	55-64	65-74	75 and over	
Males								
1951	8	22	53	179	415	829	1,058	161
1952	9	21	48	159	368	846	1,162	160
1953	8	20	54	169	406	808	1,188	164
1954	8	20	48	164	394	866	1,149	165
1955	8	22	42	164	428	910	1,310	176
1956	8	21	50	176	419	773	1,253	170
1957	8	15	47	178	440	835	1,283	177
1958	8	11	54	159	394	857	1,300	173
Females								
1951	5	17	63	182	381	604	750	137
1952	5	18	75	183	340	568	755	135
1953	7	24	76	203	337	591	716	140
1954	6	19	61	196	367	644	810	147
1955	5	21	66	181	348	658	768	145
1956	6	19	68	188	349	609	846	145
1957	7	18	73	207	378	619	960	157
1958	5	16	73	190	363	629	977	155

At the older ages some increase in the mortality rate from cancer occurred in 1958 compared with 1957. This is a continuation of the trend in recent years in which, with the exception of 1956, the cancer death rate in the age groups 75 years and over showed a fairly steady rise. The death rate from

cancer among males is appreciably higher than among females ; in 1958 the male death rate for all ages was 12 per cent above that for females. Between the ages of 25 and 54 years the cancer death rates for males are below those for females but at other ages, particularly above 75 years, the excess of male deaths is very marked. The trend in the death rate from cancer since 1938 is shown in Diagram 3 ; for the reason given earlier, the figures plotted in this diagram exclude deaths from Hodgkin's disease and leukaemia and aleukaemia.

The death rates from cancer in Ireland and neighbouring countries in the years 1951 to 1958 are compared in Table XXV.

TABLE XXV

DEATHS FROM CANCER (Nos. 140-205) PER 1,000 POPULATION IN IRELAND* AND NEIGHBOURING COUNTRIES, 1951 TO 1958

Year	Ireland *	Six Counties	England and Wales	Scotland
1951	1.49	1.53	1.96	1.92
1952	1.48	1.53	1.99	1.98
1953	1.52	1.58	1.99	1.98
1954	1.56	1.54	2.03	2.05
1955	1.61	1.60	2.03	2.06
1956	1.58	1.63	2.08	2.09
1957	1.67	1.70	2.09	2.09
1958	1.64	1.67	2.12	2.10

* Exclusive of the Six Counties

The general upward trend in the cancer death rate in each area will be noted. With the exception of the years 1954 and 1955 the cancer death rate in this country was slightly below that in the Six Counties. The cancer death rates in England and Wales and in Scotland were considerably higher than the rates in Ireland.

The death rates from cancer in 1958 in counties and county boroughs are compared in Table XXVI. Standardised rates, which eliminate the effect of different age distributions in the different areas are also shown.

TABLE XXVI

DEATH RATES FROM CANCER (Nos. 140-205) IN EACH COUNTY AND COUNTY BOROUGH, (CRUDE AND STANDARDISED) IN 1958

Area	Rate per 1,000 population		Area	Rate per 1,000 population	
	Crude	Standardised		Crude	Standardised
Carlow	1.61	1.63	Clare	1.55	1.32
Dublin County Borough	1.71	2.13	Cork County Borough	1.89	2.07
Dun Laoghaire Borough	2.21	2.32	Cork County	1.62	1.47
Dublin County (remainder)	1.15	1.69	Kerry	1.48	1.33
Kildare	1.32	1.63	Limerick County Borough	1.47	1.84
Kilkenny	1.85	1.75	Limerick County	1.86	1.77
Laois	1.69	1.57	Tipperary, N.R.	1.61	1.53
Longford	1.59	1.43	Tipperary, S.R.	2.01	1.96
Louth	1.77	1.91	Waterford County Borough	1.47	1.66
Meath	1.57	1.60	Waterford County	1.44	1.29
Offaly	1.48	1.50			
Westmeath	1.59	1.53	Munster	1.65	1.56
Wexford	1.64	1.57			
Wicklow	1.64	1.74	Galway	1.57	1.50
			Leitrim	1.82	1.47
Leinster	1.63	1.84	Mayo	1.53	1.31
			Roscommon	1.72	1.39
Cavan	1.33	1.15	Sligo	1.91	1.63
Donegal	1.82	1.62			
Monaghan	1.69	1.60	Connacht	1.64	1.44
Ulster (part of)	1.66	1.50	Total	1.64	1.64

The crude death rate from cancer in 1958 varied from 2.21 per 1,000 population in Dun Laoghaire Borough to 1.15 in Dublin County (remainder). In certain areas, however, the standardised rates were considerably different from the crude rates and when comparing the relative seriousness of mortality in different counties it is, of course, the standardised rates which should be used. In the counties of the west and north-west standardisation had the effect of lowering the death rates considerably. The standardised rates varied from 2.32 per 1,000 population in Dun Laoghaire Borough to 1.15 in Cavan. The proportion of deaths not medically certified varies widely between the different areas, being very high (i.e., 15-20 per cent) in the counties of Mayo, Leitrim, Kerry and Roscommon and low (i.e., less than 2 per cent) in the County Boroughs, the Borough of Dun Laoghaire and in the counties of Dublin, Louth, Wexford and Wicklow. Thus the possibility that some cancer deaths in the areas with low medical certification may escape detection should be borne in mind in comparing the death rates between counties.

Full details of deaths due to cancer registered in 1958, classified by site of the disease, and age group are contained in TABLE 19. The number of deaths and death rate from cancer per 100,000 in each age group for the main groups of sites are shown in Table XXVII and it will be observed that there is in

general a rapid rise in the death rate with increasing age. Deaths due to malignant neoplasms of the digestive system represented half the total cancer deaths for each sex, the death rate being about 10 per cent higher for males than females. The death rate from malignant neoplasms of the respiratory system was just over three times as great for males as for females. In the case of malignant neoplasms of the breast and genito-urinary organs the female death rate was more than double that of males, being high even in the younger age groups.

Cancer of the lung

The number of deaths from cancer of the bronchus, lung, trachea, larynx and mediastinum (commonly referred to simply as cancer of the lung) shows a very marked increase, year by year, up to 1957, although in 1958 a slight decrease occurred. In 1957 and 1958 deaths from cancer of the lung outnumbered deaths from tuberculosis of the respiratory system as a consequence of the opposite trends in mortality from the two diseases. Table XXVIII shows the numbers of deaths from cancer of the lung at five yearly intervals from 1925 to 1950 and in 1955 to 1958, and the death rates per 100,000 population at each period in Ireland, the Six Counties, Scotland and England and Wales.

TABLE XXVIII
DEATHS AND DEATH RATES IN CERTAIN YEARS IN IRELAND AND NEIGHBOURING COUNTRIES FROM CANCER OF THE BRONCHUS, LUNG, TRACHEA, LARYNX AND MEDIASTINUM (Nos. 161-165)

Country	1925	1930	1935	1940	1945	1950	1955	1956	1957	1958
	Deaths									
Ireland	56	99	120	158	209	298	524	542	606	564
Six Counties	38	53	73	124	122	204	304	364	342	340
Scotland	302	357	527	676	954	1,543	1,925	2,104	2,195	2,348
England and Wales	2,293	3,122	4,513	6,399	8,656	13,474	18,323	19,189	20,086	20,780
	Rate per 100,000 population									
Ireland	1.9	3.4	4.0	5.3	7.0	10.0	17.9	18.7	21.0	19.8
Six Counties	3.0	4.3	5.7	9.6	9.2	14.9	21.8	26.1	24.5	24.2
Scotland	6.2	7.4	10.6	14.0	20.4	29.8	37.5	40.9	42.6	45.4
England and Wales	5.9	7.8	11.1	16.0	22.1	30.7	41.2	43.0	44.7	46.1

The death rate in this country was the lowest in each year shown, the rate in 1958 being less than half that in England and Wales and Scotland. The average percentage rate of increase year by year, has been practically the same in England and Wales and Scotland but in Ireland and the Six Counties slight reductions occurred in 1958, and the mortality in Ireland at any particular time has been roughly the same as that in England and Wales fifteen years previously.

The trend in mortality in each area is illustrated in Diagram 4 in which a logarithmic scale is used to plot death rates. On account of the much larger population involved in the calculation of the rates for England and Wales than for the other countries the graph for England and Wales is the smoothest, being practically a straight line. Owing to random variations in numbers of deaths the graphs for the other areas are more irregular in shape, but each shows an underlying linear upward trend and the remarkable fact of this diagram is that the upward trend in each of the four areas is the same.

Table XXIX shows the figures relating to Ireland in greater detail, the number and sex for each age group being given.

TABLE XXIX

The first point that emerges from Table XXIX is that deaths from lung cancer have always been much more common among males than among females. Over the period 1925 to 1958 the disparity has gradually increased so that, whereas in 1925 the number of male deaths was slightly over double that of females, in 1958 there were over three times as many male as female deaths from the disease. In the case of females the death rate rises steadily with increasing age, but in the case of males the rate is usually somewhat lower in the age group 65 years and over than in the group 55 to 64 years. Between 1925 and 1958 an eleven-fold increase occurred in the death rates among males and females aged 55 to 64 years. Among males aged 65 years and over a fifteen-fold increase in the death rate occurred between 1925 and 1958, while among females in this age group a nine-fold increase in the death rate occurred.

Diseases of the circulatory system

There were 12,990 deaths ascribed to diseases of the circulatory system (Nos. 400-468) registered in 1958, of which 7,226 were deaths of males and 5,764 deaths of females. Details of these deaths, classified by cause and age may be obtained from TABLE 19 of this Report while the numbers assigned to each county or county borough are shown in TABLE 21. Deaths and death rates from certain groups of causes are given in Table XXX.

The excess of male over female deaths in the case of diseases of the circulatory system is largely accounted for by the greater number of deaths of males from coronary and arteriosclerotic heart disease (2,449 males compared with 1,263 females); in respect of the remaining groups of causes the differences between the male and female death rates is not nearly so pronounced. In interpreting Table XXX it should be borne in mind that a number of deaths (mainly of elderly persons), stated to be due to heart diseases, are not medically certified. The numbers of uncertified deaths in the above groups are shown in Table XXXI.

TABLE XXXI

DEATHS FROM DISEASES OF THE CIRCULATORY SYSTEM REGISTERED IN 1958 SHOWING THE NUMBERS AND PERCENTAGES NOT MEDICALLY CERTIFIED

Cause of death	Males			Females		
	Total	Un-certified	Per cent	Total	Un-certified	Per cent
Rheumatic fever	16	1	6.3	15	.	.
Chronic rheumatic heart disease	172	3	1.7	191	1	0.5
Chronic endocarditis	218	4	1.8	179	2	1.1
Coronary and arteriosclerotic heart disease	2,449	70	2.9	1,263	42	3.3
Other myocardial degeneration	2,542	91	3.5	2,486	114	4.6
Other diseases of heart	827	54	6.5	657	28	4.3
Hypertension with heart disease	270	1	0.4	369	.	.
Hypertension without mention of heart	218	3	1.4	210	3	1.4
Other diseases of circulatory system	514	6	1.2	394	6	1.5

It appears that only in the case of "Other diseases of heart" are errors due to the incorrect assignment of uncertified deaths to the above groups likely to be substantial. A more serious source of error is the large number of uncertified deaths ascribed simply to "senility." Thus, out of a total of 2,631 deaths (1,232 male, 1,399 female) stated to be due to senility, 1,312 (644 male, 668 female) were not medically certified. Of these uncertified deaths it is fair to suppose that a substantial proportion were caused by heart diseases.

Respiratory diseases

Deaths from respiratory diseases (Nos. 470-527 on the International List) in 1958 numbered 2,714. These included 311 deaths caused by influenza, 1,012 by pneumonia, 1,033 by bronchitis and 358 due to other respiratory diseases.

Pregnancy, childbirth and puerperium

The number of deaths in this group in 1958 was 61 compared with 81 in 1957. The death rate was 1.03 per thousand births. Table XXXII shows the deaths in 1958 classified by cause and age of mother.

TABLE XXXII

DEATHS IN 1958 FROM PUERPERAL CONDITIONS CLASSIFIED BY AGE OF MOTHER AND PRINCIPAL CAUSE

Cause of death	All ages	Age group						45 years and upwards
		15-19	20-24	25-29	30-34	35-39	40-44

Table XXXIII shows the maternal mortality rates in Ireland and neighbouring countries for the years 1951 to 1958.

TABLE XXXIII
MATERNAL DEATHS PER 100,000 BIRTHS IN IRELAND* AND NEIGHBOURING COUNTRIES, 1951-1958

Year	Number of deaths Ireland*	Deaths per 100,000 live births			
		Ireland*	Six Counties	England and Wales	Scotland
1951	103	164	109	84	109
1952	92	142	108	74	102
1953	83	133	59	77	95
1954	69	110	73	71	76
1955	70	114	83	66	46
1956	52	86	58	57	54
1957	81	132	110	48	47
1958	61	103	53	44	52

*Exclusive of the Six Counties.

Up to the year 1956 the maternal mortality rate in Ireland declined fairly steadily; the rate for that year being just over half that for 1951. In 1957, however, an increase was recorded and, although there was an improvement in 1958, the rate is still higher than that in 1956. In each of the years 1951-1958 the Irish rate has been consistently higher than that in any of the neighbouring countries. The increase in 1957 in the Irish rate was also a feature of the rate for the Six Counties.

Infant Mortality

During the year 1958 the deaths of 2,109 infants under one year of age were registered, compared with 2,027 in the previous year and 2,162 in 1956. The figure for 1958 is equivalent to a rate of 35.4 per 1,000 live births registered, compared with 33.1 in 1957 and 35.6 in 1956. Table XXXIV shows the mortality rates, per 1,000 births, at different ages under one year, for the years 1938 and 1946 to 1958.

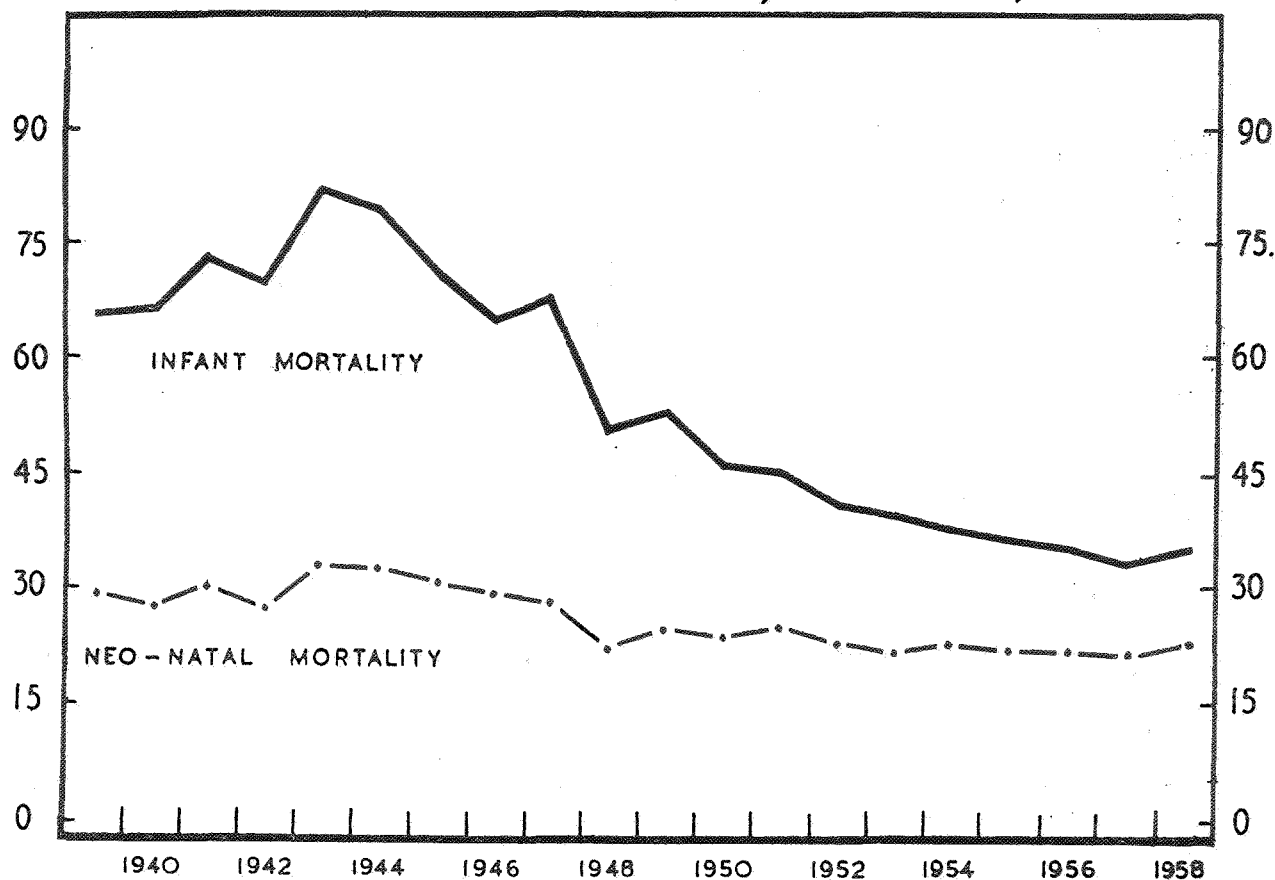

TABLE XXXIV
INFANT MORTALITY BY AGE, 1938 AND 1946 TO 1958

Year	Deaths per 1,000 births at ages											
	Under 24 hrs.	1-6 days	7-13 days	14-20 days	21 days and under 1 month	Total * under 1 month	1 month and under 2 months	2 months and under 3 months	3 months and under 6 months	6 months and under 12 months	Total 1 month-1 year	Total under 1 year
1938	8.2	8.5	4.5	3.5	3.6	28.3	8.3	6.9	12.4	10.7	38.3	66.6

1947	7.0	8.8	4.7	4.1	4.2	28.8	9.1	7.0	13.0	10.0	39.1	67.9
1948	6.4	8.2	3.3	2.2	3.1	23.2	6.0	5.0	8.7	7.3	27.0	50.2
1949	6.9	8.3	3.2	3.0	3.2	24.6	6.0	4.9	9.8	7.9	28.6	53.2
1950	6.5	9.1	3.0	2.5	2.0	23.1	5.1	3.8	8.1	5.9	22.9	46.0
1951	7.3	10.1	3.6	2.1	1.8	24.9	5.2	3.6	6.5	5.5	20.8	45.7
1952	6.9	9.6	3.1	1.8	1.6	23.0	5.0	2.9	5.8	4.7	18.4	41.4
1953	7.4	8.8	2.4	1.5	2.0	22.1	4.1	2.9	5.8	4.5	17.3	39.4
1954	8.0	8.9	2.5	1.7	1.5	22.6	3.6	2.7	4.8	4.1	15.2	37.8
1955	7.6	9.0	2.8	2.0	1.5	22.9	3.5	2.1	4.4	3.8	13.8	36.7
1956	7.4	8.2	3.0	2.5	1.6	22.7	3.5	2.4	3.9	3.1	12.9	35.6
1957	7.8	8.2	2.8	1.8	1.4	22.0	2.7	2.0	3.7	2.7	11.1	33.1
1958	8.4	9.0	2.3	2.4	1.5	23.6	3.5	2.1	3.4	2.8	11.8	35.4

* For 1950 to 1958, under 4 weeks.

Infant mortality showed little change from 1938 to 1947, but since then a considerable reduction has occurred. The greatest improvement has been in respect of mortality of infants over one month: deaths between the ages of one month and one year declined from 39.1 per 1,000 births in 1947 to 11.8 per 1,000 births in 1958. The reduction in neo-natal mortality (i.e., at ages under one month) has been less marked: whereas deaths under one month amounted to 28.8 per 1,000 births in 1947, the corresponding figure in 1958 was 23.6. No significant change has occurred since 1947 (or 1938) in mortality at ages under 24 hours or between one day and one week. Deaths occurring within 24 hours of birth represented 7.0 per 1,000 births in 1947, compared with 8.4 in 1958. Deaths occurring between one day and one week after birth represented 8.8 per 1,000 births in 1947 compared with 9.0 in 1958. The trends in the infant and neo-natal mortality rates are illustrated in Diagram 5.

INFANT AND NEO-NATAL MORTALITY (PER 1,000 LIVE BIRTHS) 1939-1958.

In Table XXXV the infant mortality rates in Ireland and neighbouring countries are compared for the years 1951 to 1958.

TABLE XXXV

INFANT MORTALITY RATES IN IRELAND* AND NEIGHBOURING COUNTRIES, 1951-1958

Period	Deaths of infants under 1 year per 1,000 live births			
	Ireland *	Six Counties	England and Wales	Scotland
1951	46	41	30	37
1952	41	39	28	35
1953	39	38	27	31
1954	38	33	25	31
1955	37	32	25	30
1956	36	29	24	29
1957	33	29	23	29
1958	35	28	23	28

* Exclusive of the Six Counties

In each of the years shown the infant mortality rate in this country was the highest in the table while that in England and Wales was the lowest. Up to the year 1930 the infant mortality rate in Ireland had maintained a lower level than that in the Six Counties, England and Wales and Scotland. In the decade 1931-40 also the Irish rate compared very favourably with those in the Six Counties and Scotland, although a marked reduction in infant mortality in England and Wales had brought the rate for these countries below that for Ireland. The subsequent decrease in infant mortality has been greater in the Six Counties, England and Wales and Scotland than in this country.

Table XXXVI compares the neo-natal and infant mortality rates in the year 1958 for counties and county boroughs.

TABLE XXXVI

NEO-NATAL AND INFANT MORTALITY RATES FOR COUNTIES AND COUNTY BOROUGHS IN 1958

Area	Deaths of infants per 1,000 births			Area	Deaths of infants per 1,000 births		
	Under 28 days	28 days to 1 year	Under 1 year		Under 28 days	28 days to 1 year	Under 1 year
Carlow	33	13	47	Clare	23	12	35

Monaghan	24	8	32	Total	24	12	35
Ulster (part of)	23	13	36				

NOTE :—In some cases the figures in the first two columns do not tot to that in the third column on account of rounding.

In 1958 the infant mortality rates were highest in the Counties Tipperary (N.R.), Westmeath, Carlow, Longford and Leitrim. The lowest rates of infant mortality occurred in the Counties of Sligo, Meath, Kilkenny, Wexford, Cork and Galway. The neo-natal mortality rate ranged from 12 per 1,000 births for County Sligo to 39 per 1,000 births for County Tipperary (N.R.).

The causes of deaths of infants under one year, classified according to the Detailed International List are shown in TABLE 19. In TABLE 26 infant deaths are again classified by cause, and a more detailed age classification shown. These results are summarised in Table XXXVII.

TABLE XXXVII

DEATHS OF INFANTS UNDER ONE YEAR REGISTERED IN 1958, CLASSIFIED BY CAUSE AND AGE

International List Nos.	Cause	Age				
		Under 1 day	1 day to 1 week	1 week to 4 weeks	4 weeks to 1 year	Total under 1 year
001-019	Tuberculosis, all forms	5	5
340	Meningitis, except meningococcal and tuberculous	1	15	16
056, 470-475 480-483 490-493 500-502 510-527, 763	Whooping cough, influenza, pneumonia, bronchitis, and other respiratory diseases	5	31	113	251	400
530-587, 764	Diseases of digestive system (including gastro-enteritis, colitis and diarrhoea of newborn)	1	1	23	95	120
750-759	Congenital malformations	92	106	92	155	445
760, 761	Birth injuries	92	85	15	6	198
762	Asphyxia and atelectasis	91	87	20	9	207
770	Haemolytic disease (erythroblastosis)	20	26	8	3	57
771	Haemorrhagic disease	1	4	4	3	12
774, 776	Immaturity	139	124	27	17	307
773·0	Ill-defined diseases of early infancy :— Without mention of immaturity	14	19	16	20	69
773·5	With mention of immaturity	25	27	7	4	63
780·2	Convulsions	3	2	11	16
	Other causes	18	22	44	110	194
	Total	498	535	372	704	2,109

It will be seen that the relative importance of the various groups of causes differs appreciably between deaths at ages under one week and deaths at ages 4 weeks to one year. At ages under one week 25 per cent of all deaths were ascribed to immaturity, while, as may be seen from TABLE 26, many deaths ascribed to other underlying causes were with mention of immaturity. Postnatal asphyxia and atelectasis accounted for 17 per cent of deaths under one week, birth injuries for 17 per cent, and congenital malformations for 19 per cent. Eight per cent of the deaths under one week were assigned to the heading "Ill-defined diseases peculiar to early infancy" (No. 773 of the Detailed International List); deaths described by such terms as "asthenia", "athrepsia", "cachexia", "debility", "inanition", "marasmus", "cyanosis neonatorum", "hepatitis of newborn", or "sclerema neonatorum", and not otherwise specified must be allocated to this heading. The majority of deaths due to haemolytic or haemorrhagic disease were at ages under one week. At ages over 4 weeks, congenital malformations were still an important cause of death, but only a small proportion of deaths were ascribed to immaturity, birth injuries or asphyxia. The majority of infant deaths from tuberculosis, meningitis, respiratory diseases, gastro-enteritis, and convulsions occurred at ages over 4 weeks. Details of the 194 deaths ascribed to "other causes" may be obtained from TABLE 19. This figure includes 50 deaths from external causes (accidents, etc.), 25 from sepsis of newborn, 13 from mental deficiency, 11 from septicaemia and pyaemia, 7 from meningococcal infections and 6 from diseases of the thymus gland.

Accidents, poisoning and violence

The number of deaths from external causes (Nos. E.800-999) registered in 1958 was 940, of which 613 were those of males and 327 those of females. The excess of male mortality from these causes was very marked at all ages between 5 and 75 years. In the age groups between 10 and 45 years, in which male deaths from all causes outnumbered female deaths, it will be seen from TABLE 19 that the excess of male deaths was due to the higher number of deaths from accidents. Table XXXVIII shows the number of deaths from accidents, poisoning or violence in 1958 and certain previous years.

TABLE XXXVIII

DEATHS FROM ACCIDENTS, POISONING AND VIOLENCE, 1938, 1946 AND 1951 TO 1958

Cause of death	1938	1946	1951	1952	1953	1954	1955	1956	1957	1958
Railway accidents	5	14	10	6	8	2	6	13	6	4

Accidental poisoning	10	20	29	22	20	13	19	19	18	15
Accidents caused by fire, explosion and burns ..	156	105	85	77	71	96	95	78	72	77
Accidental drowning	98	119	121	104	134	125	146	112	107	127
Accidental falls	401	409	264	198	195	237	270	256	257	240
Other accidents and external causes			175	150	166	178	174	152	135	127
Suicide	97	79	77	66	62	59	68	76	73	77
Total	957	880	996	862	907	970	1,051	1,016	897	940

The number of deaths from external causes in 1958 amounted to 940, compared with 897 in 1957, the principal increase occurring in the case of road vehicle accidents. The total number of deaths from external causes has shown no pronounced tendency to rise or fall since 1938.

Particulars of deaths registered in 1958 due to accidents in the home are given in Table XXXIX.

TABLE XXXIX

DEATHS DUE TO ACCIDENTS IN THE HOME REGISTERED IN 1958, CLASSIFIED BY CAUSE AND AGE GROUP

Inter-national List Nos.	Cause of death	All ages	Under 1 year	1-4	5-14	15-24	25-34	35-44	45-54	55-64	65-74	75 and over

Total deaths from accidents in the home		M	72	19	14	3	.	2	3	4	2	12
		F	73	12	9	5	.	1	2	.	1	13

There were 145 deaths due to accidents in the home registered in 1958. It will be seen that accidental falls resulted in 45 deaths of which the majority were deaths of elderly persons. Accidents caused by fire, hot liquids, etc., resulted in 49 deaths of which 20 were of children under 15 years and 25 were of persons aged 65 years and over.

Uncertified deaths

The number of cases in 1958 in which the cause of death was not certified by a medical practitioner was 2,271, which represents 6.6 per cent of the total deaths registered. In TABLE 23 uncertified deaths registered in 1958 are shown classified by county and age group, while the percentage of deaths uncertified in each county is also shown. The proportion of deaths uncertified is very high in the west and north-west regions of the country, being highest, in the year 1958, in the counties of Mayo (20.3 per cent), Leitrim (19.7 per cent), Kerry (16.9 per cent) and Roscommon (15.0 per cent).

Table XL compares the percentages of deaths uncertified in each province for a number of years, and it will be observed that a steady improvement in the position is taking place.

TABLE XL

UNCERTIFIED DEATHS AS A PERCENTAGE OF THE TOTAL REGISTERED IN EACH PROVINCE IN THE YEARS 1938, AND 1951 TO 1958

Province	1938	1951	1952	1953	1954	1955	1956	1957	1958
Leinster ..	7.3	4.6	4.6	3.6	3.4	3.5	2.6	2.6	2.0
Munster ..	14.7	12.1	9.4	9.3	8.4	7.8	7.4	7.2	6.5
Connacht ..	32.7	26.9	24.4	22.8	21.1	20.3	18.0	16.9	16.3
Ulster (part of) ..	26.2	18.6	16.2	15.7	16.0	14.7	13.6	10.8	11.0
Total ..	16.0	12.2	10.6	9.8	9.2	8.8	7.7	7.1	6.6

Table XLI shows the percentage of deaths uncertified in 1958 by age group, in each province.

TABLE XLI

PERCENTAGE OF DEATHS UNCERTIFIED, BY AGE GROUPS, IN EACH PROVINCE IN 1958

Province	All ages	Under 1 year	1-4	5-14	15-24	25-34	35-44	45-54	55-64	65-74	75 and over
Leinster	2.0	0.1	2.1	.	.	1.2	1.1	0.3	0.9	1.2	3.8
Munster	6.5	1.0	1.1	1.6	1.1	2.1	1.7	1.4	1.7	2.6	11.7
Connacht	16.3	2.4	2.4	4.0	5.0	4.6	0.7	2.1	1.9	7.6	27.0
Ulster (part of) ..	11.0	4.2	.	5.3	.	.	1.1	3.0	2.9	5.7	17.8
Total ..	6.6	0.9	1.7	1.4	1.1	2.0	1.2	1.2	1.4	3.0	12.3
Actual number of deaths uncertified ..	2,271	19	5	3	3	8	12	24	63	244	1,890

The proportion of deaths uncertified was highest in the age groups 65-74 years and 75 years and over, while only a very small proportion of young adult deaths was uncertified. In most age groups the provinces of Connacht and Ulster (part of) compare very unfavourably with Leinster and Munster in respect of the percentage of deaths uncertified.

Inquests and post-mortems

The number of deaths registered on certificates issued by coroners as the result of inquests and post-mortem examinations during 1958 was 1,567 compared with 1,471 in 1957 and 1,696 in 1956.

PART II--TABLES

TABLE 1.—ESTIMATED POPULATION IN THOUSANDS AT THE MIDDLE OF EACH YEAR,* 1851 TO 1958

Year	Persons	Males	Females	Year	Persons	Males	Females	Year	Persons	Males	Females
1851	5,079	2,486	2,593	1887	3,600	1,788	1,812	1923	3,014	1,526	1,488
1852	4,927	2,413	2,514	1888	3,554	1,766	1,788	1924	3,005	1,521	1,484
1853	4,807	2,358	2,449	1889	3,516	1,748	1,768	1925	2,985	1,512	1,473
1854	4,704	2,311	2,393	1890	3,482	1,733	1,749	1926	2,971	1,507	1,464
1855	4,638	2,281	2,357	1891	3,449	1,718	1,731	1927	2,957	1,502	1,455
1856	4,594	2,261	2,333	1892	3,408	1,697	1,711	1928	2,944	1,498	1,446
1857	4,540	2,234	2,306	1893	3,382	1,684	1,698	1929	2,937	1,496	1,441

TABLE 7.—DEATHS FROM PRINCIPAL CAUSES IN IRELAND AND THE SIX COUNTIES, 1958, WITH RATES
PER 100,000 POPULATION

NOTE.—The classification of cause of death in this table is based on the Abbreviated List, 1955

Detailed List No.	Cause of death	Ireland *		Six Counties	
		Number	Rate	Number	Rate
001-008	Tuberculosis of respiratory system	502	17.6	139	9.9
010-019	Tuberculosis, other forms	79	2.8	15	1.1
020-029	Syphilis and its sequelae	16	0.6	31	2.2
040	Typhoid fever	2	0.1	.	.
045-048	Dysentery, all forms	2	0.1	2	0.1
050-051	Scarlet fever and streptococcal sore throat ...	5	0.2	.	.
055	Diphtheria	6	0.2	.	.
056	Whooping cough	11	0.4	8	0.6
057	Meningococcal infections	19	0.7	3	0.2
080	Acute poliomyelitis	9	0.3	5	0.4
085	Measles	6	0.2	.	.
100-108	Typhus and other rickettsial diseases
110-117	Malaria	2	0.1	.	.
030-039, 041, 042, 044, 049, 052-054, 059-074, 081-083, 086-096, 120-138	All other diseases classified as infective and parasitic	88	3.1	39	2.8
140-205	Malignant neoplasms including neoplasms of lymphatic and haematopoietic tissues:				
140-205 (except 201 and 204)	(a) Cancer	4,501	157.8	2,253	160.7
201, 204	(b) Hodgkin's disease and leukaemia ...	181	6.3	88	6.3
210-239	Benign and unspecified neoplasms	110	3.9	38	2.7
260	Diabetes mellitus	213	7.5	97	6.9
290-293	Anaemias	189	6.6	60	4.3
330-334	Vascular lesions affecting central nervous system	3,696	129.5	2,149	153.2
340	Non-meningococcal meningitis	34	1.2	9	0.6
400-402	Rheumatic fever	31	1.1	20	1.4
410-416	Chronic rheumatic heart disease	363	12.7	200	14.3

* Exclusive of the Six Counties

TABLE 7.—(contd.)—DEATHS FROM PRINCIPAL CAUSES IN IRELAND AND THE SIX COUNTIES, 1958,
WITH RATES PER 100,000 POPULATION

Detailed List No.	Cause of death	Ireland *		Six Counties	
		Number	Rate	Number	Rate
420-422	Arteriosclerotic and degenerative heart disease ...	9,137	320.3	4,389	313.0
430-434	Other diseases of heart	1,484	52.0	513	36.6
440-443	Hypertensive heart disease	639	22.4	350	25.0
444-447	Other hypertensive disease	428	15.0	159	11.3
480-483	Influenza	311	10.9	55	3.9
490-493	Pneumonia	1,012	35.5	636	45.4
500-502	Bronchitis	1,033	36.2	539	38.4
540-541	Ulcer of stomach and duodenum	242	8.5	99	7.1
550-553	Appendicitis	47	1.6	11	0.8
560, 561, 570	Intestinal obstruction and hernia	159	5.6	78	5.6
543, 571, 572	Gastritis, duodenitis, enteritis and colitis, except diarrhoea of newborn	198	6.9	72	5.2
581	Cirrhosis of liver	69	2.4	34	2.4
590-594	Nephritis and nephrosis	450	15.8	121	8.6
610	Hyperplasia of prostate	232	8.1	120	8.6
640-689	Deliveries and complications of pregnancy, child-birth and the puerperium	61	2.1	17	1.3
750-759	Congenital malformations	520	18.2	222	15.8
760-762	Birth injuries, post-natal asphyxia and atelectasis	405	14.2	170	12.1
762-768	Infections of newborn	196	6.9	46	3.3
769-776	Other diseases peculiar to early infancy, and immaturity unqualified	530	18.6	254	18.1
780-795	Senility without mention of psychosis, ill-defined and unknown causes	3,164	110.9	568	40.5
	All other causes	2,926	102.3	1,031	73.5
E810-E835	Motor vehicle accidents	236	8.3	140	10.0
E800-E802 E840-E962	All other accidents	618	21.7	303	21.6
E963, E970-E979	Suicide and self-inflicted injury	77	2.7	43	3.1
E964-E965, E980-E999	Homicide and operations of war	9	0.3	6	0.4
	All causes	34,248	1,200.4	15,132	1,079.1

* Exclusive of the Six Counties

TABLE 19—(contd.)—DEATHS IN 1958, CLASSIFIED BY CAUSE (INTERNATIONAL

Detailed List Number	Cause of death		Age at								
			All ages	Under 1 year	1	2	3	4	Total under 5	5-9	10-14
147	Malignant neoplasm of hypopharynx	M	2
		F	5
148	Malignant neoplasm of pharynx, unspecified	M	31
		F	17
150	Malignant neoplasm of oesophagus	M	90
		F	69
151	Malignant neoplasm of stomach	M	485
		F	379
152	Malignant neoplasm of small intestine, including duodenum	M	8
		F	5
153	Malignant neoplasm of large intestine, except rectum	M	229
		F	268
154	Malignant neoplasm of rectum	M	162
		F	107
155	Malignant neoplasm of biliary passages and of liver (stated to be primary site)	M	19
		F	39
156	Malignant neoplasm of liver (secondary and unspecified)	M	68
		F	65
157	Malignant neoplasm of pancreas	M	98
		F	100
158	Malignant neoplasm of peritoneum	M	7
		F	6
159	Malignant neoplasm of unspecified digestive organs	M	4
		F	5
160	Malignant neoplasm of nose, nasal cavities, middle ear, and accessory sinuses	M	3
		F	9
161	Malignant neoplasm of larynx	M	49
		F	25
162	Malignant neoplasm of bronchus and trachea, and of lung specified as primary	M	146
		F	37
163	Malignant neoplasm of lung, unspecified as to whether primary or secondary	M	237
		F	65
164	Malignant neoplasm of mediastinum	M	4
		F	1
170	Malignant neoplasm of breast	M	4
		F	338
171	Malignant neoplasm of cervix uteri	F	48	
172	Malignant neoplasm of corpus uteri	F	11	
174	Malignant neoplasm of uterus, unspecified	F	96	
175	Malignant neoplasm of ovary, Fallopian tube, and broad ligament	F	75	
176	Malignant neoplasm of other and unspecified female genital organs	F	16	
177	Malignant neoplasm of prostate	M	204	
178	Malignant neoplasm of testis	M	5	.	.	1	.	.	1	.
