Production in Building and Construction Index

Quarter 3 2011 (First Estimates) Quarter 2 2011 (Final Figures)

Seasonally Adjusted Production in Building and Construction index (Base: Year 2005=100)

	Volume Index	Value Index
Q3 2010	27.5	31.0
Q2 2011	22.8	25.2
Q3 2011	22.2	25.3
Quarterly % change	-2.6%	+0.4%
Annual % change	-19.3%	-18.4%

Building and Construction Output down by 2.6% in 3rd Quarter 2011

The volume of output in building and construction was 2.6% lower in the third quarter of 2011 when compared with the preceding period. This reflects falls in the volume of civil engineering (-3.6%) and residential building (-6.5%). Output in non-residential building rose by 6.0%. The change in the value of production for all building and construction was +0.4%. See table 1(a), 1(c), 2(a), 2(b) and graph.

On an annual basis, the volume of output in building and construction decreased by 19.3% in the third quarter of 2011 when compared with the third quarter of 2010. The value of production also decreased by 18.4% in the same period. *See table 1(a)*.

The fall in the volume of output reflects year-on-year declines throughout the industry of 25.2%, 21.8% and 6.1% respectively in residential building work, civil engineering and non-residential building work. See tables 1(c), 2(a), 2(b) and graph.

EU comparisons

In the year to Quarter 3 2011, output in the building and construction sector rose by 1.0% and 0.9% respectively in the EU27 and the EA17. The largest increases were in Estonia (+25.5%), Latvia (+19.6%) and Lithuania (+18.4%). The largest decreases were in Slovenia (-25.3%), Ireland (-18.8%) and Hungary (-13.7%). See table 3(b).

¹ Working Day Adjusted Series.

Background Notes

Production in Building & Construction Index

The quarterly production in building and construction index provides quarterly statistics on output in the sector. The index monitors trends in the value and the volume of production in building and construction. The primary purpose of the index is to measure changes in value added at constant prices.

The principal difference between the value and volume indices is that the volume index traces the quantitative volume of production (i.e. effect of price changes excluded) each quarter. The Capital Goods price index for Building and Construction was used as the price deflator for this series.

This series is also available using the interactive tables in the CSO's Database Direct on www.cso.ie

Reference Periods

The production in building and construction index is carried out on a quarterly basis (i.e. the first quarter covers January, February and March etc.).

Base Year

The set of indices, based on the Laspeyres Index, has been compiled with reference to base year 2005 = 100. The underlying structural weighting system is based on annual output in the Building and Construction sector as published in the DKM Economic Consultants Review of the Construction Industry for the year 2007, which presents annual output for reference year 2005.

Legal Basis

The Quarterly Survey of Construction (QSC) is carried out in accordance with the Statistics (Quarterly Survey of Construction) Order 2009, Number 73 made under the 1993 Statistics Act. The statistics are also required for EU comparisons under Council Regulation (EC) No. 1165/98 which has been amended by Regulation (EC) No. 1893/2006 with the introduction of NACE Rev. 2.

Scope and Coverage

The production in building and construction index covers, on a sample basis, the production of all firms in the private (i.e. non-State) sector whose main activity is building, construction or civil engineering i.e. firms classified to division F of the Statistical Classification of Economic Activities in the European Community (NACE Rev. 2). Approximately 2,000 firms are surveyed each quarter.

Seasonal Adjustment

Seasonal Adjustment is conducted using the direct seasonal adjustment approach. Under this approach, each individual series is independently adjusted. Each individual seasonally adjusted series is calculated based on working day adjusted data.

The adjustments are completed by applying the X-12-ARIMA model, developed by the U.S. Census Bureau to the working day adjusted data. This methodology estimates seasonal factors while also taking into consideration factors that impact on the quality of the seasonal adjustment such as:

• Outliers and level shifts in the series.

For additional information on the use of X-12-Arima see(Findley, D.F., B.C. Monsell, W.R. Bell, M.C Otto, and B. Chen (1998), "New Capabilities and Methods of the X-12-Arima Seasonal Adjustment Program", *Journal of Business & Economic Statistics*, 16, pp. 127-177.) and www.census.gov/srd/www/x12a/

Methodology

A detailed description of the methodology is available on the CSO website at: http://www.cso.ie/surveysandmethodologies/documents/pdf_docs/qsc_methodology.pdf

Comparison with other national series

There are differences (due to timing, definitions and other factors) between the quarterly and annual trends measured by this survey and by other national data sources. In particular the quarterly series from the QSC show considerable volatility. Table A, below, compares the main *annual* results of the survey with national employment and house building indicators.

The series shows a decrease of 30.5% in the annual volume of production in building and construction, between 2009 and 2010. In the same period, employment in the sector, as measured by the QNHS, fell by 19.4%.

For residential buildings, the QSC shows a decrease of 38.3% in the annual volume of production between 2009 and 2010, whereas the house completions series shows a decrease of 44.7%.

Data on house-building commencements, a relatively new leading indicator, are also included in Table A. This indicator shows a decrease of 25.5% in residential building in 2010 when compared with 2009.

Table A: Comparison of Building and Construction sector indicators

	Nev	w CSO Ser	ies	Oth	er Indicato	rs
	Seasonally Adjusted Volume of production in building and construction ³	Seasonally Adjusted Volume of production in civil engineering ³	Seasonally Adjusted Volume of production in residential building ³	Persons Employed in the Construction Sector ¹	House Completions ²	House Commencement Notices ²
	Index	Index	Index	No.	No.	No.
	2005=100	2005=100	2005=100			
2006	103.2	112.3	100.8	251,600	88,187	75,602
2007	89.3	117.4	79.2	269,900	78,027	48,876
