1 Revised

2 Provisional

3 Includes hours for which staff were paid for being available for work but were unable to do so due to inclement weather; the corresponding payments are included with earnings.

Background Notes

- Background** This enquiry was initiated in 1969 and first results were published in the September 1970 Statistical Bulletin. Since the mid 1970's the inquiry covers private businesses in the Building and Construction industry with ten or more persons engaged.
- Scope** Data are collected for a specific week in the middle of the last month of each quarter. The details collected each quarter are in respect of skilled and unskilled workers and other employees (managerial, technical, clerical and supervisory). The information collected for each category of employee are total number of persons engaged, total earnings and total hours worked during the survey week.
- Definitions**
- Total number engaged:** All persons who were at work or on holidays with pay during the week in question.
- Total weekly earnings:** Gross pay before deduction of income tax and employee's social insurance payments. "Wet time" payments are also included but lodging allowance is not.
- Hours worked:** Respondents are asked to include overtime hours as hours actually worked and not as hours paid for. Travelling time, if applicable, and hours for which staff were paid for being available for work but were unable to do so due to the weather, are also included. The corresponding payments are included in the earnings total.
- Derived Averages** The average earnings and hours worked given in these tables are derived from the total employment, earnings and hours worked of all businesses responding in the quarter. Comparisons between different periods can, therefore, be affected by the establishment or closure of businesses whose rates differ significantly from the average. Another factor which can affect, in particular, the rates of hourly earnings and hours worked is the manner in which businesses report hours worked by employees on piece rates. Businesses employing piece workers can only provide an estimate of hours worked which may, in some instances, differ significantly from hours actually worked.
