*Preliminary Estimates

## Weekly earnings down by 0.6\% in year to Q4 2009

Average weekly earnings fell to $€ 716.09$ in Q4 2009, down from $€ 720.57$ a year earlier representing a fall of $0.6 \%$ over the year. This compares with a revised estimated decrease of $0.3 \%$ in the year to Q3 2009. See tables 1 and 2.

The fall in weekly earnings reflects the decrease in paid hours $(-1.5 \%$ over the year to Q4 2009) while average hourly earnings increased by $0.9 \%$ year on year.

- Across the economic sectors average weekly earnings fell in 9 of the 13 sectors with the largest decreases in the Transportation and storage ( $-8.7 \%$ ) and Information and communication ( $-7.1 \%$ ) sectors. See figure 1.
- Weekly earnings in the private sector fell by $2.1 \%$ compared with a rise of $0.6 \%$ in the public sector. Earnings in the latter are, however calculated before deduction of the pension levy that was introduced in March 2009.
- The weekly earnings of Production, transport, craft and other manual workers fell by $4.1 \%$ in the year to Q4 2009. Relatively lower decreases were recorded for the Clerical, sales and service employees and Managers, professionals and associated professionals occupational groups ( $-0.7 \%$ and $-0.8 \%$ respectively).
- Greater levels of decrease were recorded in smaller enterprises with a fall of $5.2 \%$ over the year for enterprises with less than 50 employees compared with a fall of $1.1 \%$ for enterprises with between 50 and 250 employees while an increase of $1.4 \%$ was recorded for enterprises with more than 250 employees.

Earnings figures are gross amounts before deductions for PRSI, tax and other levies such as the pension levy. In addition to underlying trends in pay rates and working patterns, changes in average earnings and paid hours are influenced by changes in the composition of the workforce. See background notes for more details.

Figure 2 Average hourly earnings $€$

## Paid hours per week fall by 1.5\% to Q4 2009

Average weekly paid hours fell to 32.0 in Q4 2009, a fall of 0.5 hours or $1.5 \%$ over the year. Decreases in average weekly paid hours were recorded in 11 of the 13 economic sectors with the greatest proportional decreases being recorded in Construction (-4.6\%) and Information and communication (-4.2\%). See table 2.

In the private sector average weekly paid hours fell by $2.4 \%$ over the year from 32.7 hours to 31.9 hours, while an increase of $1.0 \%$ was recorded in average weekly paid hours in the public sector.

## Hourly earnings up by 0.9\% in year to Q4 2009

Average hourly earnings rose from $€ 22.17$ per hour in Q4 2008 to $€ 22.36$ in Q4 2009, a rise of $0.9 \%$. Increases in hourly earnings were recorded in 5 of the 13 economic sectors while decreases were recorded in the other 8 sectors. The largest increase in hourly earnings was recorded in Industry ( $+3.3 \%$ ) while the largest decrease was recorded in the Transport and storage (-6.3\%). See tables 1 and 2 and figure 2.

In the private sector hourly earnings increased slightly from $€ 19.72$ to $€ 19.74$, a rise of $0.1 \%$ while the public sector saw a decrease of $0.3 \%$ from $€ 29.92$ to $€ 29.83$. In the year to Q3 2009 increases of $1.2 \%$ and $1.9 \%$ were recorded in the private and public sectors respectively. Estimated averages do not reflect differences in characteristics of the job or the employees. EHECS collects aggregate data from each enterprise so it is not possible to correct for such differences using EHECS data. For a more detailed analysis of the difference in public and private sector pay please refer to supplementary analysis of the National Employment Survey 2007. See tables 1 and 2.

The occupational groups Managers, professionals and associated professions and Production, transport, craft and other manual workers both saw a decline in hourly earnings of $0.2 \%$ and $1.4 \%$ respectively while the hourly earnings of Clerical, sales and service employees showed a marginal increase of $0.1 \%$ over the year.

Irregular earnings decreased in 9 of the 13 economic sectors and fell in the year from $€ 1.12$ to $€ 1.04$ overall. When irregular earnings are excluded hourly earnings increased in 6 of the 13 sectors and increased overall from $€ 21.05$ to $€ 21.32$ over the year $(+1.3 \%)$. See table 3 .

Irregular earnings of employees in the Managers, professionals and associated professionals occupational group fell by $13.2 \%$ over the year from $€ 1.90$ per hour on average to $€ 1.65$. Irregular earnings fell by $11.0 \%$ for Clerical, sales and service employees while they increased by $13.5 \%$ for workers in the Production, transport, craft and other manual workers occupational group. However, irregular earnings remained the highest for the Managers, professionals and associated professionals group, both as an absolute amount ( $€ 1.65$ per hour) and as a proportion of overall average hourly earnings (5.0\%).

## Hourly labour costs increase by 0.3\% over the year

Other labour costs decreased from $€ 3.60$ per hour to $€ 3.48$ per hour in the year to Q4 $2009(-3.3 \%)$. The most notable decrease was seen in the Wholesale and Retail sector where other labour costs decreased from $€ 3.34$ to $€ 2.62$ per hour ( $-21.6 \%$ ). See table 4.

When other labour costs are added to earnings overall average labour costs increased by $0.3 \%$ from $€ 25.77$ per hour in Q4 2008 to $€ 25.84$ per hour in Q4 2009. See table 4.

## Greatest decrease in employment for production workers

The number of employees in the Production, transport, craft and other manual workers occupational category fell by $15.1 \%$ over the year to Q4 2009. Relatively lesser decreases of $6.0 \%$ and $6.5 \%$ were recorded for the Managers, professionals and associated professionals and Clerical, sales and service employees occupational groups respectively. See annex table A1.

## Supplementary analysis of EHECS data - Wage bill changes in enterprises

In addition to this quarterly release on core earnings and labour costs a supplementary analysis using EHECS data is also being released today. The supplementary analysis focuses on the changes recorded in the wage bill of enterprises who responded to the EHECS in both quarter 32008 and quarter 3 2009. Details are provided at a sectoral level on the overall level of change in the wage bill among the matched enterprises.

The analysis then looks at how this change was implemented with regards to the 3 main components of the wage bill namely, number of employees, average weekly paid hours and average hourly earnings. The report also includes a note on compositional effect on earnings with the conclusion that such as a compositional effect on earnings can be estimated with available data it is of a low order of magnitude. The analysis can be found on the cso website, www.cso.ie by clicking on 'Releases and Publications' and then 'Earnings'.

## *Preliminary Estimates

Table A1 shows the estimated trend in the number of employees over time broken down by the different classifications used in this release. It should be noted that the Quarterly National Household Survey (QNHS) is the official source of estimates of employment The figures presented above refer most closely to the number of employees as estimated by the QNHS but differ in coverage in certain ways, such as the fact that a person with 2 jobs could be counted twice in the table and the exclusion of the Agriculture, forestry and fishing sector which is covered by the QNHS. The estimates presented above are particularly useful in assessing the impact of employment changes on overall average earnings and hours paid. For example if the proportion of Managers, professionals and associated professionals increases over time this would, all other things being equal, increase average earnings levels as this occupational group has higher than average earnings.

| NACE Principal Activity |  | Employer Response Rate \% |  | Employee Response Rate \% |  | Total number of respondent enterprises in Q409 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Q3 2009* | Q4 2009* | Q3 2009* | Q4 2009* |  |
| B-E | Industry | 66 | 61 | 80 | 75 | 692 |
| F | Construction | 57 | 54 | 68 | 67 | 299 |
| G | Wholesale and retail trade; repair of motor vehicles and motorcycles | 65 | 63 | 82 | 78 | 947 |
| H | Transporation and storage | 66 | 65 | 86 | 86 | 172 |
| I | Accommodation and food services | 56 | 55 | 64 | 62 | 506 |
| J | Information and communication | 66 | 62 | 78 | 78 | 174 |
| K-L | Financial, insurance and real estate | 67 | 66 | 93 | 93 | 211 |
| M | Professional, scientific and technical | 67 | 65 | 81 | 80 | 301 |
| N | Administrative and support services | 61 | 59 | 73 | 75 | 219 |
| 0 | Public administration and defence | 63 | 64 | 76 | 77 | 89 |
| P | Education | 70 | 70 | 35 | 33 | 129 |
| Q | Human health and social work | 79 | 74 | 80 | 78 | 364 |
| R-S | Arts, entertainment, recreation and other service activities | 63 | 57 | 79 | 71 | 237 |
| Total |  | 64 | 61 | 74 | 72 | 4,340 |

This table shows the response rates achieved by sector. Greater caution should be taken in the interpretation of estimates for sectors with lower response rates as these sectors could be subject to greater revisions if response levels are increased for final estimates.

## Background Notes

Introduction The Earnings, Hours and Employment Costs Survey (EHECS) has replaced the four-yearly Labour Cost Survey, and also replaces all other existing CSO short-term earnings inquiries. The EHECS results are comparable across sectors and include more detail on components of earnings and labour costs than is currently available.

This development is part of the CSO strategy to improve earnings statistics, the other element being the annual National Employment Survey (NES). Both these surveys will provide better coverage of earnings and employment costs and other workplace-related issues.

Legislation The survey information was collected by the Central Statistics Office (CSO) under the S.I. No 314 of 2008 Statistics (Labour Costs Surveys) Order 2008. The information collected is treated as strictly confidential in accordance with the Statistics Act 1993. The survey results meet the requirements for Labour Costs statistics set out in Council Regulation (EC) 530/1999.

## Business Register

The CSO's Business Register provided the register of relevant enterprises for the survey. An enterprise is defined as the smallest legally independent unit.

## Business Classification

The business classification used for the EHECS is based on the Statistical Classification of Economic Activities in the European Community (NACE Rev.2). The NACE code of each enterprise included in the survey was determined from the predominant activity of the enterprise, based on information provided in this or other CSO inquiries.

New Nace NACE Rev 2 is the new classification system for economic activities, updated from NACE Rev Classification
1.1. A major revision of NACE was conducted between 2000 and 2007, in order to ensure that the NACE classification system remained relevant for the economy. The main changes that affected the release was the reclassification of some industrial enterprises from industry to services (principally in the software and publishing sectors) and the inclusion of steam, air conditioning supply, sewerage, water management and remediation activities in industry.

Coverage The survey results relate to enterprises in the Nace Rev 2 Sections B - E (Industry), F (Construction), G (Wholesale \& retail trade: repair of motor vehicles \& motorcycles), H (Transportation \& storage), I (Accommodation \& food services activities), J (Information \& communication), K-L (Financial, insurance \& real estate activities), M (Professional, scientific \& technical activities), N (Administrative \& support services activities), O (Public administration \& defence), P (Education), Q (Human health \& social work activities) and R-S (Arts, entertainment, recreation \& other service activities) with 3 or more employees. The data was collected at the enterprise level.

From 2008 Q1 onwards all enterprises with 50 or more employees and a sample of the 3 to 49 employees were surveyed. The sample was based on the proportion of companies in each NACE 2 digit economic sectors in the 3 to 49 size classes ( 3 to 9,10 to 19 and 20 to 49). In previous quarters, all enterprises in the size class 20 to 49 were included in the survey.

The survey was conducted by post and questionnaires were issued in the last week of the relevant quarter. Some returns were received electronically. All returns were scrutinised for accuracy. Where appropriate, firms were queried by post or telephone regarding incompleteness, apparent inconsistencies, etc. Information about the survey was posted on the CSO website and all questionnaires and instructions were available electronically there.

Differences with existing sources

The EHECS is a new survey and is not directly comparable with current short-term earnings surveys such as the Quarterly Industrial Inquiry (QII), the Quarterly Services Inquiry (QSI) and the Quarterly Earnings and Hours worked in Construction (QEC). The main differences are:

- The EHECS collects data on the entire reference quarter while the QII, QSI and QEC only collect data for a reference week in the quarter.
- Data on earnings and labour costs per hour is generally presented on the basis of hours paid and worked in the EHECS. Data on earnings per hour is presented on the basis of hours paid (including paid leave) in the QII..
- The EHECS uses a standardised form for all NACE sectors with a standard occupational classification for all enterprises while the QII, QSI and QEC surveys had their own occupational classifications. However the EHECS category "Production, Craft and other Manual workers" corresponds broadly to the "Industrial" category in the QII; the EHECS category "Clerical, Sales and Service Workers" also corresponds broadly to the QII category "Clerical and other office staff"; the QII category "Managerial and technical staff" is largely equivalent to the EHECS category "Managers, Professional and Associated Professionals".
- There is an occupational breakdown for full-time and part-time staff in the EHECS that did not exist at all for the QII or QEC and was only used by some of the enterprises in the QSI.
- The EHECS collects data for enterprises while the QII collected data for local units.
- Data on hours is collected for all categories of employees in the EHECS, while such data was limited to the industrial workers in the QII, non-managerial employees in the QEC and not collected at all in the QSI.
- The earnings data collected for the EHECS includes irregular earnings, irregular bonuses etc while these items were excluded from the QII, QSI and QEC which only collected data on regular earnings (including regular bonuses) and overtime.
- Non-labour costs such as employers PRSI, other social costs, benefit in kind etc., are collected for the EHECS but were not collected for the QII, QSI and QEC surveys.
- Data on employees in the QII, QSI and QEC was collected with regard to the reference week. In the EHECS employment data is collected with regard to the first and last day of the quarter.

## Definitions Employees:

All full-time or part-time workers paid a specific wage or salary or who had a contract of employment were defined as employees. Persons not working for salary e.g. family members, directors, partners, outside pieceworker's etc., are not considered employees but other persons engaged. These workers are included separately but not used in the calculation of derived variables. All employment figures are rounded to the nearest hundred.

## Part-time Employees:

Part-time employees were defined as those who normally worked less than around 30 hours per week. These included persons who worked for some whole days per week as well as those who worked for part of the day each day.

Apprentices Apprentices are defined as those whose wages/salaries are governed by the fact that they work either under an apprenticeship contract or as part of a training program. They are included in the calculation of earnings and hours data. They were also combined with full-time and part-time employees in determining the size group to which enterprises were classified.

## Category of

Information was collected separately for three occupational groups. The three groups are:

1. Managers, Administrators, Professionals and Associate Professionals.
2. Clerical, Sales and Service workers.
3. Production, Transport workers, Craft \& Tradespersons and other Manual workers.

Wages and Salaries
All wages and salaries payments are gross (i.e. before deduction of income tax and employees' PRSI contributions and levies such as the public sector pension levy). In the analysis, the total wages and salaries are divided into:

- Regular earnings i.e. pay and allowances paid at each pay period, even if the amount may vary.
- Overtime, i.e. payments for working in excess of normal hours, usually paid at a premium.
- Irregular bonuses and premiums, pay and allowances not paid at each pay period, i.e. annual or quarterly bonuses etc.

Hours - Weekly paid hours include total contracted hours plus overtime hours.

Other Costs The following are the other categories of labour costs:

- Statutory employers' PRSI.
- Other social costs; which encompass pension fund contributions, life assurance premiums, income continuance insurance as well as other employee-related payments paid by the employer.
- Benefits in kind; which include private use of company cars, stock options \& share purchase schemes, voluntary sickness insurance, staff housing and other free or subsidised benefits (e.g. canteen facilities, childcare provision, health costs).
- Other labour costs; which include the social security contributions for apprentices, training costs, as well as other expenditure such as recruitment costs and employers' liability insurance.
- Redundancy payments

## Subsidies and Refund

## National Minimum

 WageThese are amounts received by firms under the various state schemes (IDA employment incentive scheme, grants etc.) as well as refunds from the Department of Social and Family Affairs (DFSA) for sick and maternity leave. These are deducted from the firms' labour costs in the analysis.

The National Minimum Wage Act 2000 became law on the $1^{\text {st }}$ April 2000. Enterprises were asked to indicate the number of employees in receipt of $€ 8.65$ per hour or less at the end of each quarter. A detailed guide to the Act is available from the Department of Enterprise, Trade and Employment at www.entemp.ie. Employees earning less than the minimum wage due to age or training status are also included. These rates do not apply to close relatives of the employer or apprentices other than apprentice hairdressers.

## Derived Variables Persons Employed

The sum of full-time employees and part-time employees on the last day of the quarter plus the average number of apprentices engaged during the quarter.

## Average Hourly Earnings

The sum of regular earnings, irregular earnings, overtime earnings and payment for days not worked for the quarter divided by total paid hours for the quarter.

## Average Irregular Earnings

Total irregular earnings in the quarter divided by total paid hours for the quarter.

## Average Weekly Paid Hours

Total paid hours for the quarter divided by the average number of persons employed during the quarter divided by 13 ( 13 weeks in a quarter). Unpaid hours worked (including unpaid overtime) and unpaid leave are excluded.

## Other Labour Costs

The sum of other labour costs divided by total paid hours for the quarter. Other labour costs include redundancy payments, employers' contributions to social security, other social costs, benefit in kind, training costs and other labour costs. Subsidies and refunds received were deducted.

## Hourly Labour Costs

Hourly labour costs are total labour costs divided by the total number of hours paid during the quarter.

## Earnings Per Week

Total earnings for the quarter divided by the average number of persons employed during the quarter divided by 13 ( 13 weeks in a quarter).

## Methodology for production of final results

All enterprises with 50 or more employees are surveyed as well as a sample of enterprises which had between 3 and 49 employees inclusive. The classifications by size of enterprise are based on total persons engaged on the first day of the quarter.

Weighting For enterprises with 3 to 49 employees inclusive, a weighting factor (the reciprocal of the sampling fraction) is used to weight the estimates to the total population for both employees and enterprises. The CSO Business Register forms the basis of the sampling frame used for weighting the sample data to the population. Decay factors are calculated for each size class and sector to adjust the non-sampled element of the register for the respondent non-relevant enterprises.

Imputation Imputation is carried out for non-respondents in the greater than 50 employees' categories. Where an enterprise responded in the previous quarter ratio-imputation is used to estimate figures for the current quarter while for enterprises that did not respond in the previous quarter a stratum average imputation method is used to estimate the missing variables. These estimates are based on respondent enterprises of a similar size and activity.

## Final Estimates

## Interpretation of results

After imputation, all enterprises with 50 or more employees are accounted for and included in the final dataset. For those cells where a sample survey of enterprises is used (enterprises employing between 3 and 49 employees), the results are expanded using the grossing factors to cover the entire population for the relevant industries in the quarter. Macro edits are carried out at this stage and any outliers are investigated and corrected. Coherence of the data is ensured by scrutinising quarter on quarter changes.

The series presented in this release and all estimates deriving from the EHECS survey are primarily of use as an indicator of trends in average earnings and paid hours of employees across different classifications. However, in interpreting the trends and in undertaking direct comparison of the average level of earnings of different groups of employees or sectors some caution in interpretation is warranted.

In the case of trends, changes in the composition of employees in a given sector or group has an effect on the average levels of earnings and paid hours over time. For example if the proportion of part time employees increases within a sector then it would be expected that the average weekly earnings and paid hours would fall in that sector even if hourly pay rates were unchanged.

In the case of direct comparison of earnings levels estimates are based on raw earnings levels. To get a true picture of differences in earnings levels of different employees comparisons should take account of differences in the characteristics of employees such as length of service, educational attainment level, nature of work etc., none of which are available via EHECS. The additional information available from the annual National Employment Survey (NES) allows for a more detailed analysis of differences in earnings levels and should be referred to by users seeking more detailed information on earnings determinants than is available from EHECS.
