### Average income highest in Dublin Region in 2010

Of the eight regional authority areas, the Dublin region had the highest average disposable income per person in 2010. At €21,515 the average disposable income per person in Dublin was 11.4 per cent higher than the State figure of €19,318. None of the other seven regions had an average disposable income per person higher than the State total. The Border (€17,374) and Midland (€17,133) regions fared worst among the eight regions.

The gap between the maximum and minimum value of disposable income per person per region decreased from €4,739 in 2009 to €4,382 in 2010.

The percentage premium of 11.4 per cent which Dublin had compared with the State total in 2010 was less than the 12.3 per cent in 2009 (see graph). The lowest region (i.e. the Midland region) had a decrease of 1.3 per cent relative to the State average. Dublin was the only region with higher per capita disposable income than the State average during the entire 2002-2010 period while the Midland and Border regions occupied the lowest ends of the disposable income distribution range for the most recent five years.

Viewed in a slightly longer term perspective (i.e. from 2002 onwards) the divergence between the regional authority areas has narrowed over the years (see Table 4).

See Background Notes for the definitions of the various terms used. The results presented in this release at State level are compatible with those published in "National Income and Expenditure 2011".

**Regional Disposable Income at NUTS2 level,  
2002 to 2010 (State = 100)**

## Greater uncertainty at county level

While the County figures involve added uncertainty they do nevertheless provide a useful indication of the degree of variability at that level. Dublin, Kildare, Limerick and Cork are the only counties where per capita disposable income exceeds the state average.

At the other end of the spectrum, the counties of Donegal and Kerry have had per capita disposable incomes below 90 per cent of the State level during the entire period of 2002 to 2010.

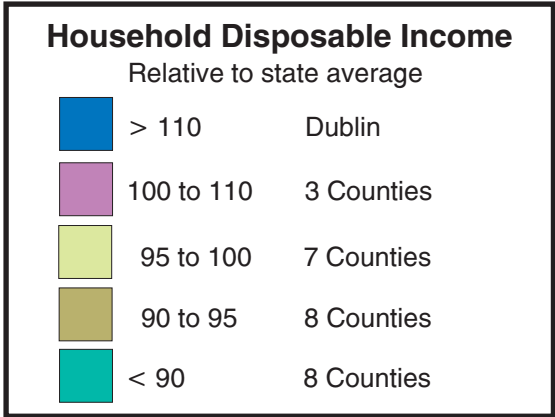

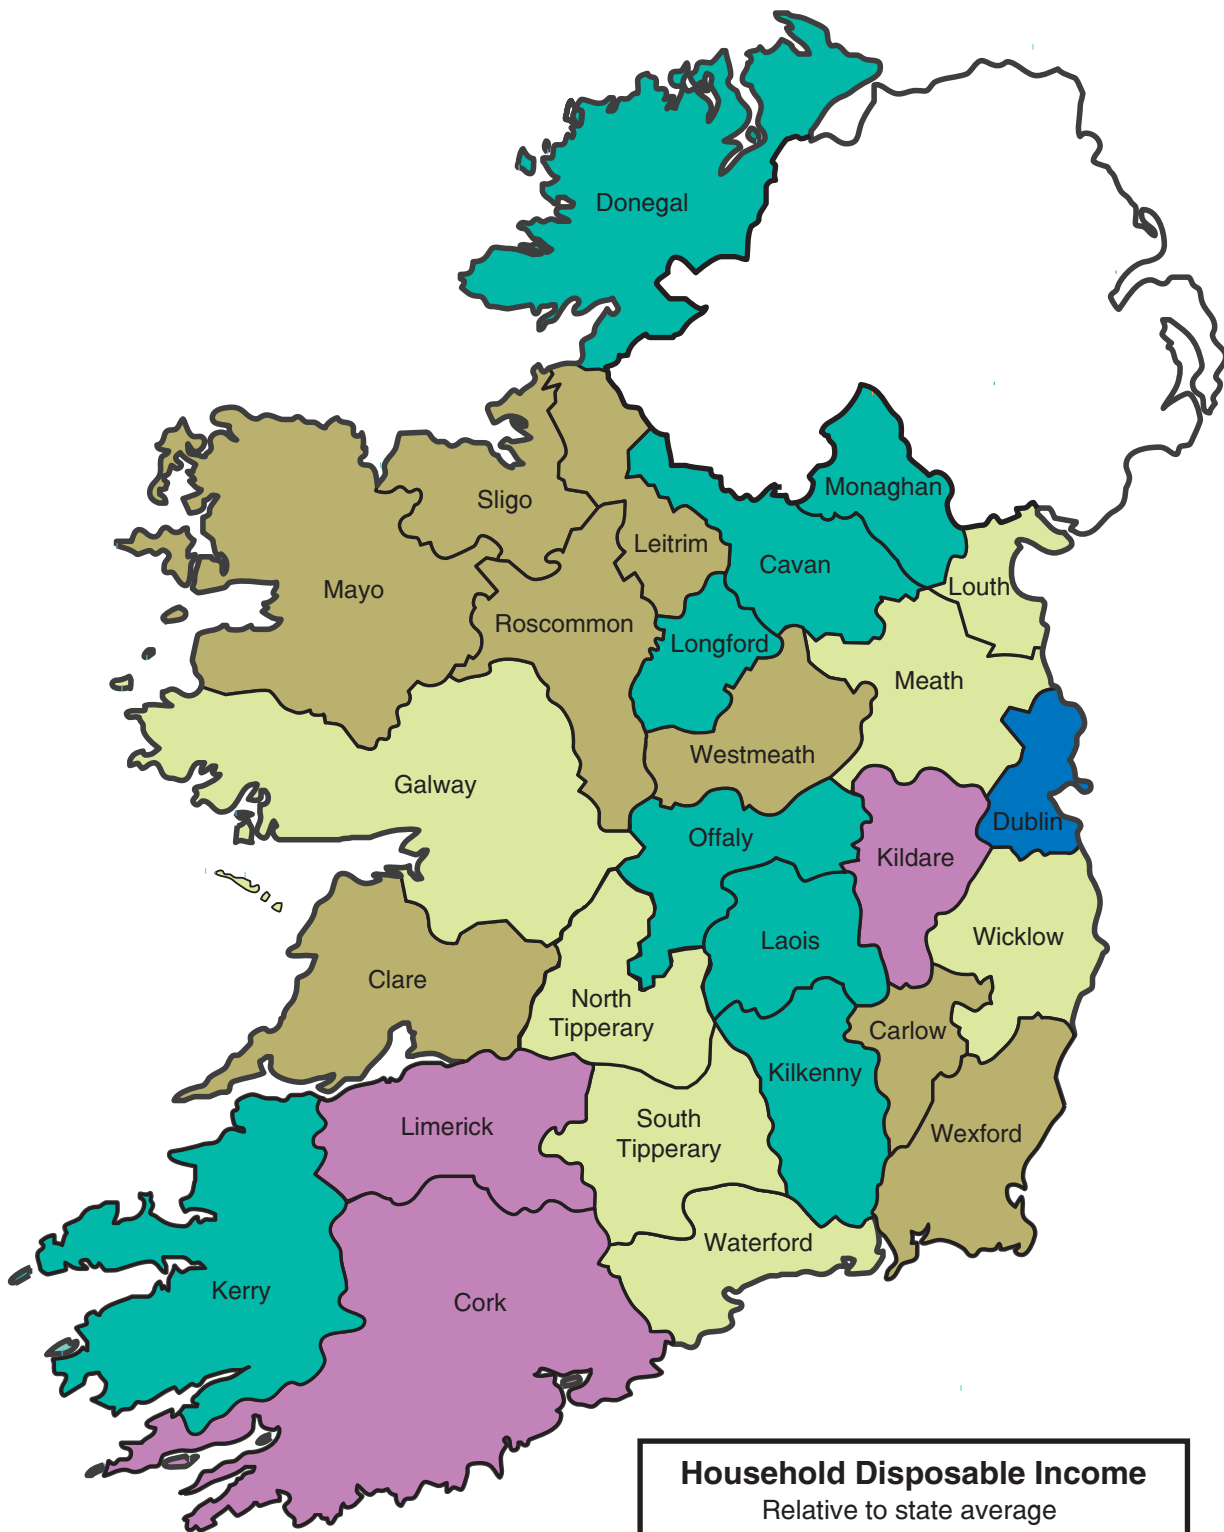

However, in line with the results at regional authority level the degree of variability between the county income figures has been steadily declining since 2002.

## Primary income plays a major role

Adding social transfers to primary income and subtracting off income taxes and social insurance contributions results in disposable income. In the counties of Dublin, Kildare, Meath and Wicklow, primary income exceeded disposable income in 2010 (see Table 1). These are the counties with the highest employment rates as indicated in the results of the 2011 census.

On the other hand, in the counties of Donegal, Carlow, Longford, Leitrim and Wexford, primary income made up less than 85 per cent of disposable income, leading to a greater reliance on social transfers to boost disposable income.

Details for the years 2010 and 2009 are shown in tables 1 and 2, respectively. Detailed tables in respect of 2002 to 2008 are available on request.

<sup>1</sup> Estimates are provided for Regional Authority areas and counties. The county estimates should be interpreted with caution because the underlying data are not always sufficiently robust. They should be regarded as indicative of relative levels rather than as accurate absolute figures.

<sup>1</sup>Estimates are provided for Regional Authority areas and counties. The county estimates should be interpreted with caution because the underlying data are not always sufficiently robust. They should be regarded as indicative of relative levels rather than as accurate absolute figures.

**Table 7 Estimates of Disposable Income Per Person (Excluding Rent) by Region and County, 2002 to 2010<sup>1</sup>**

This table excludes rent, which is mainly imputed rent of owner occupied dwellings, from disposable income.

| Disposable Income Per Person (€) (Excluding Rent) |               |               |               |               |               |               |               |               |               |

<sup>1</sup>Estimates are provided for Regional Authority areas and counties. The county estimates should be interpreted with caution because the underlying data are not always sufficiently robust. They should be regarded as indicative of relative levels rather than as accurate absolute figures.

**Table 8 Indices of Disposable Income Per Person (Excluding Rent) by Region and County, 2002 to 2010<sup>1</sup>**

This table excludes rent, which is mainly imputed rent of owner occupied dwellings, from disposable income.

|                                    | Indices of Disposable Income Per Person (Excluding Rent) |              |              |              |              | (State =100) |              |              |              |  |

<sup>1</sup>The relationship between GVA at Factor Cost, Basic Prices and Market Prices can be seen in Table 14.

<sup>2</sup>Total GVA does not equal the sum of the three sectors shown due to the effect of the Statistical Discrepancy (€1,221m in 2009 and -€581m in 2010 at State level) - see Background Notes.

<sup>1</sup>Total GVA does not equal the sum of the three sectors shown due to the effect of the Statistical Discrepancy - see Background Notes.

## Background Notes

**Introduction** Household income data were first published in 2000 (Household Incomes Regions and Counties 1991-1997 – Pn 8218) and the publication included a detailed description of the methodology used to estimate the regional values of the income components. Since then, results have been issued on an annual basis.

Regional accounts were first published in 1996 (Regional Accounts 1991 – Pn 3232). They were in respect of 1991 and a full description of the methodology used was included. A further set of accounts in respect of 1993 was published in 1997 with some additional methodological details. Results have been published annually since.

**Revisions** Revisions to national accounts data published in National Income and Expenditure 2011 have been carried through into these tables, as is the usual practice.

**NACE** Tables 15 to 18a provide GVA for the regions broken down into three main sectors of the economy. In former releases these sectors were defined as in the publication “National Income and Expenditure 2010” (NIE 2010) and corresponded with the national classification system of industries used in National Accounts at the time. The sectors have been revised in this release to correspond with the NACE Rev.2 classification system. A similar revision was implemented in the publication NIE 2011 to which the overall national figures in this release correspond. The main effect of the NACE Rev.2 classification on the three sectors distinguished in tables 15 to 18a is that the Publishing industry (including the publishing of software) has been reclassified from the *Manufacturing* sector to the *Services* sector. This results in the services sector accounting for a larger proportion of total GVA in this release compared to former releases. Similarly, the manufacturing sector accounts for a smaller proportion of GVA in this release than in former releases.

The more significant aggregates in all tables in these accounts (e.g. gross value added, compensation of employees) are compiled internally according to the NACE classification system. The NACE Rev.2 system has been used in compiling the results in this release as compared to the NACE Rev.1 system in former releases. The retrospective data for the years 2002 to 2009 have also been recalculated using NACE Rev.2. This inevitably gives rise to some revisions to the retrospective series.

## Household Income

**Primary Income** Household *Primary Income* is defined for National Income purposes as follows:

Compensation of employees (*i.e. Wages and Salaries, Benefits in kind, Employers’ social insurance contributions*)

*plus*

Income of self-employed

*plus*

Rent of dwellings (*including imputed rent of owner-occupied dwellings*)

*plus*

Net interest and dividends

The last component is a net item, which implies that payments by households of interest are deducted in deriving primary income.

**Total Income** *Total income* is defined as:

Primary income

*plus*

Social benefits

*plus*

Other current transfers

**Disposable Income** *Disposable income* is defined as follows:

Total income

*minus*

Current taxes on income (*i.e. Income taxes, other current taxes*)

*minus*

Social insurance contributions (*i.e. Employers', employees', self-employed, etc.*)

**National Income** The estimates for the State for the different components of household income have already been published in the National Income and Expenditure Report 2011 (NIE 2011). The *other current transfer payments* to and from households are included in this household income report on a net basis with *social benefits*.

**Per Capita Incomes** The CSO publishes population estimates at regional level annually but not at county level. County populations for 2002 to 2010 have been estimated in this report by applying the year to year changes at regional level, shown in the revised regional population figures which were compiled following the publication of the 2002 Census and the 2006 Census, to the counties within the regions. The population figures for 2002 and 2006 have been taken directly from the 2002 Census and the 2006 Census.

**Statistical Discrepancy** The official level of GDP is taken to be the average of the independently compiled Income and Expenditure estimates. The resulting balancing item, which is half of the difference between the two estimates is called the Statistical Discrepancy. This must be added to the income components in tables 1 and 2 to derive Total Household Income.

## GDP by Region

|                               |   |        |  |         |                                       |      |  |        |  |          |                            |          |   |            |   |            |                                  |
|-------------------------------|---|--------|--|---------|---------------------------------------|------|--|--------|--|----------|----------------------------|----------|---|------------|---|------------|----------------------------------|
| <b>Gross Value Added</b>      | <p>Gross Value Added (GVA) at <i>basic prices</i> is a measure of the value of the final goods and services produced in a region (less the materials and services used which come from outside the region) priced at the value which the producers received minus any taxes payable and plus any subsidies receivable as a consequence of their production or sale. GVA differs from household income in three main respects.</p> <ul style="list-style-type: none"> <li>• Firstly, GVA includes the total profits of companies. Company profits arising in the State, which accrue to non-residents, are considerable.</li> <li>• Secondly, the workforce that produces the GVA in a region may not live there and may bring their incomes home to a neighbouring region in which they will be included in household incomes.</li> <li>• Thirdly, personal income includes items such as social welfare benefits and factor incomes from abroad, which are not included in GVA.</li> </ul> <p><i>(Note: GDP and GVA are the same concept i.e. they measure the value of the goods and services (or part thereof) which are produced within a region or country. GDP is valued at market prices and hence includes taxes charged and excludes the value of subsidies provided. GVA at basic prices on the other hand excludes product taxes and includes product subsidies – see table 14).</i></p> |        |  |         |                                       |      |  |        |  |          |                            |          |   |            |   |            |                                  |
| <b>Valuation</b>              | <p>Value added is firstly calculated at <i>factor cost</i>, which includes all subsidies and excludes all taxes. Conversion to a valuation at <i>basic prices</i> is achieved by subtracting <i>overhead</i> subsidies and adding <i>overhead</i> taxes. Conversion to <i>market prices</i> is then obtained by subtracting <i>product</i> subsidies and adding <i>product</i> taxes (see table 14). Most of the tables in this report on GVA are based on GVA at basic prices. However tables 15a to 18a are based on GVA at factor cost. The results in this release are based on the ESA95 system of accounts which is now in use throughout the European Union. Results provided in earlier releases (up to <i>GDP by region 1997</i>) were based on the ESA79 system of accounts. GVA is one of the principal concepts used in deciding eligibility for structural funds within the EU.</p>  |        |  |         |                                       |      |  |        |  |          |                            |          |   |            |   |            |                                  |
| <b>EU Average</b>             | <p>The indices of GVA per person in relation to the EU27=100 for years 2002 to 2010, shown in table 11, are based on the relevant position of Ireland as given on the Eurostat website.</p>   |        |  |         |                                       |      |  |        |  |          |                            |          |   |            |   |            |                                  |
| <b>Regions</b>                | <p>The regional classifications in this release are based on the NUTS (Nomenclature of Territorial Units) classification used by Eurostat. The regions for which the accounts have been compiled are the eight Regional Authority NUTS3 regions. The Mid East region (Kildare, Meath and Wicklow) and the Dublin region are affected by a substantial proportion of their workforce living in one region and commuting to work in another. It is therefore more meaningful to combine these two regions. The definition of the regions is outlined below. Figures have also been shown for the two overall NUTS2 regions i.e. “Border, Midland and Western” region and “Southern and Eastern” region.</p>   |        |  |         |                                       |      |  |        |  |          |                            |          |   |            |   |            |                                  |
