

Figure 1 Numbers in employment (ILO), in the second Quarters 2009 to 2013

Quarterly National Household Survey Quarter 2 2013

Headline labour market indicators

Indicator	Quarter 2 2013	Annual change
Employed	1,869,900	+ 33,800
Unemployed	300,700	- 22,200
In labour force	2,170,700	+ 11,500
Not in labour force	1,415,600	- 16,300

Employment increases by 1.8% in year to Q2 2013

There was an annual increase in employment of 1.8% or 33,800 in the year to the second quarter of 2013, bringing total employment to 1,869,900. This compares with an annual increase in employment of 1.1% in the previous quarter and a decrease of 1.3% in the year to Q2 2012.

Summary Points for Q2 2013

- ◆ The increase in total employment of 33,800 in the year to Q2 2013 was represented by an increase in full-time employment of 21,600 (+1.5%) and an increase in part-time employment of 12,100 (+2.8%).
- ◆ On a seasonally adjusted basis, employment increased by 9,600 (+0.5%) in the quarter.
- ◆ The seasonally adjusted unemployment rate decreased from 13.8% to 13.7% over the quarter while the number of persons unemployed fell marginally by 500 persons, again on a seasonally adjusted basis.
- ◆ Unemployment decreased by 22,200 (-6.9%) in the year to Q2 2013 bringing the total number of persons unemployed to 300,700. This is the fourth quarter in succession where unemployment has declined on an annual basis.
- ◆ The long-term unemployment rate decreased from 9.2% to 8.1% over the year to Q2 2013. Long-term unemployment accounted for 58.2% of total unemployment in Q2 2013 compared with 61.8% a year earlier and 56.1% in the second quarter of 2011.
- ◆ The total number of persons in the labour force in the second quarter of 2013 was 2,170,700, representing an increase of 11,500 (+0.5%) over the year. This compares with an annual labour force decrease of 19,600 (-0.9%) in Q2 2012. The number of persons not in the labour force in Q2 2013 was 1,415,600, a decrease of 16,300 (-1.1%) over the year.

After each Census of Population the sample of households for the QNHS is updated to ensure the sample remains representative. The new sample based on the 2011 Census of Population is being introduced incrementally from Q4 2012 to Q4 2013. This change in sample can lead to some level of variability in estimates, particularly at more detailed levels and some caution is warranted in the interpretation of trends over the period of its introduction.

Note: Please see background notes for discussion on the interpretation in the volume of persons who are employed, unemployed etc.

Employment

Employment up 33,800 in year

The number of persons employed increased by 1.8% (+33,800) over the year to Q2 2013. This compares with an annual increase in employment of 1.1% in the previous quarter and a decrease of 1.3% in the year to Q2 2012. This is the third quarter in succession where employment has grown on an annual basis. See tables 1a, 1b, 7a and 7b.

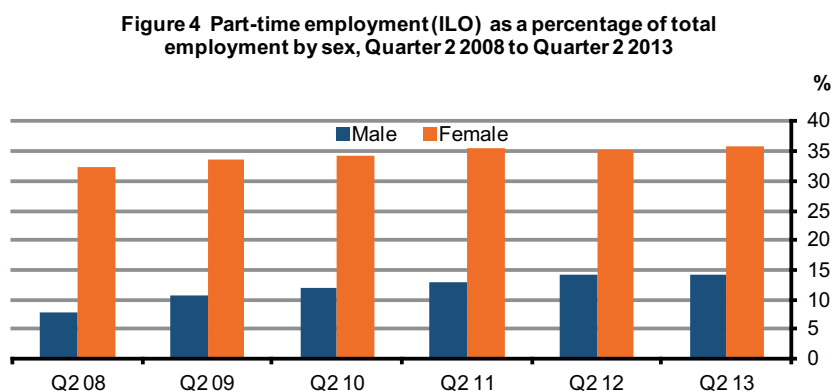

- ◆ Full-time employment increased by 21,600 or 1.5% in the year to Q2 2013 while part-time employment increased by 12,100 or 2.8% over the year. See tables 1a and 1b.
- ◆ The annual increase of 33,800 (+1.8%) in employment was male dominated as male employment increased by 28,700 (+2.9%) over the year representing 84.9% of the total increase. Female employment increased by 5,100 (+0.6%) over the period. See tables 1a, 1b, 7a and 7b.
- ◆ On a seasonally adjusted basis, employment increased by 9,600 (+0.5%) in the quarter. This follows on from a seasonally adjusted increase in employment of 9,000 (+0.5%) in Q1 2013 and a seasonally adjusted increase in employment of 12,100 (+0.7%) in Q4 2012. See tables 3a and 3b.
- ◆ Employment fell in five of the fourteen economic sectors over the year (excluding *Not stated*). The greatest rates of decline were recorded in the *Administration and support service activities* (-7.9% or -5,000), *Transportation and storage* (-5.4% or -4,900) and *Public administration and defence; compulsory social security* (-4.5% or -4,500) sectors. See tables 2a, 2b and figure 2.
- ◆ The largest rates of increase were recorded in the *Agriculture, forestry and fishing* (+18.7% or 16,300) and the *Accommodation and food service activities* (+8.0% or 9,600) sectors. In the case of the *Agriculture, forestry and fishing* sector it can be noted that estimates of employment in this sector have shown to be sensitive to sample changes over time. Given the continued introduction of the sample based on the 2011 Census of Population as outlined in the note on the front page of this release, particular caution is warranted in the interpretation of the trend in this sector at this time. See tables 2a, 2b and figure 2.

In addition:

- ◆ The largest annual increases in employment were in the 35-44 (+16,600 or +3.4%) and 45-54 (+15,800 or +4.0%) age groups. Decreases in employment were recorded in the 25-34 (-11,900 or -2.3%) and 20-24 (-2,100 or -1.7%) age groups.
- ◆ The overall employment rate among persons aged 15-64 was 60.2% in Q2 2013, an increase of 1.4 percentage points over the year. See figure 3.

- ◆ The number of employees in Q2 2013 was 1,550,800, up 19,600 (+1.3%) over the year. The number of self-employed persons increased by 11,500 or +3.9% to 303,800.
- ◆ Part-time underemployment decreased over the year, down 7,300 or -4.6% to 149,400. This is the first annual decline in part-time underemployment recorded since the third quarter of 2010. Part-time underemployment represented 33.0% of total part-time employment in Q2 2013 having been 31.3% two years earlier.
- ◆ The unemployment rate for 15-24 year olds (youth unemployment rate) decreased from 33.0% to 29.6% over the year to Q2 2013.

Public Sector Employment

Based on the higher response levels and lower levels of subjectivity associated with the Earnings, Hours and Employment Costs Survey (EHECS) the CSO believes it offers a more reliable source for public sector employment estimates over time. Table A3 in the annex shows these estimates of public sector employment.

The number of employees in the public sector declined by 5,400 (-1.4%) in the year to Q2 2013, bringing the total number of employees in the public sector to 377,300. The total reduction in employment in the public sector over the three years from Q2 2010 to Q2 2013 was 31,600 (-7.7%). See table A3.

The number of employees in the private sector showed an increase of 21,400 (+1.9%) over the year to Q2 2013, compared with an increase of 600 in the year to Q2 2012. The total number of employees in the private sector increased by 5,600 (+0.5%) over the three years from Q2 2010 to Q2 2013. See table A3.

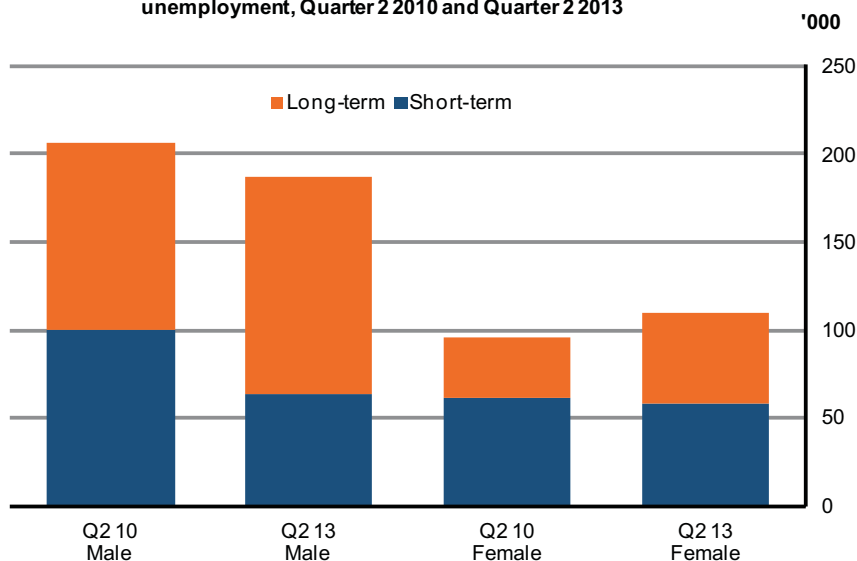

Unemployment

300,700 persons unemployed in Q2 2013

There were 300,700 persons unemployed in the second quarter of 2013. This represents a decrease of 22,200 or 6.9% in the year. This is the fourth quarter in succession in which unemployment has decreased on an annual basis having been on a continuous upward trend since 2005. Up to 2008 increases in unemployment were primarily related to significant increases in the size of the labour force. From 2008 onwards unemployment increased more rapidly as employment fell. *See tables 1a and 1b.*

- ◆ A different trend was seen for male versus female unemployment as male unemployment fell 26,800 (-12.4%) to 189,600 over the year to Q2 2013, while female unemployment increased by 4,600 (+4.3%) to 111,200. *See tables 1a and 1b.*
- ◆ The overall unadjusted unemployment rate decreased from 15.0% to 13.9% over the year to Q2 2013. The male unemployment rate was 15.9% in the quarter (down from 18.1% in Q2 2012) while the female unemployment rate was 11.4% in the quarter (up from 11.0% in Q2 2012). *See tables 1a and 1b.*
- ◆ In the year to Q2 2013, the number of persons classified as long-term unemployed decreased by 24,500 (-12.3%), bringing total long-term unemployment to 175,000. Short-term unemployment increased by 1,900 (+1.6%) over the year to 121,800. Long-term unemployed persons now account for 58.2% of all unemployed persons. *See tables 6a, 6b and figure 5.*
- ◆ The long-term unemployment rate decreased from 9.2% to 8.1% over the year to Q2 2013. The long-term unemployment rate was 8.2% in the second quarter of 2011. *See tables 6a, 6b and figure 5.*

Figure 5 Number of persons unemployed by sex and duration of unemployment, Quarter 2 2010 and Quarter 2 2013

- ◆ The seasonally adjusted unemployment rate decreased from 13.8% to 13.7% over the quarter. *See tables 3a and 3b.*
- ◆ There was a marginal quarterly decrease of 500 in the seasonally adjusted number of persons unemployed. This is the fifth quarter in succession where a seasonally adjusted decrease in unemployment has been recorded. *See tables 3a and 3b.*
- ◆ The previously published standardised unemployment rate (SUR) for May 2013 was 13.7%. This was based on the short-term trend in the Live Register since the previous QNHS seasonally adjusted unemployment rate benchmark from Q1 2013 and no revision is therefore required to this figure as it is in line with the QNHS estimate for Q2 2013. Provisional estimates for more recent months are included in table A4 in the annex and are subject to update once Live Register information becomes available for August 2013. *See table A4.*

Labour force

Labour force increases 0.5% in year

The total number of persons in the labour force in the second quarter of 2013 was 2,170,700. This represents an increase of 11,500 (+0.5%) over the year and compares with an annual labour force decrease of 19,600 (-0.9%) in the year to Q2 2012. See tables 1a, 1b and figure 6.

- ◆ As with employment, the number of persons in the labour force is also influenced by changes in the size of the working age population (demographic effect). Up to the start of 2008 this demographic effect had been adding 65,000 or more to the labour force on an annual basis, primarily driven by net inward migration. This demographic effect peaked at almost 88,000 in the second quarter of 2007. With the decline in inward migration the positive demographic effect started to fall in the second half of 2007 and continued to decline throughout 2008 and 2009 before becoming negative in Q4 2009. In Q2 2013 this negative demographic effect contributed 16,300 to the overall decline in the labour force. This negative demographic effect is almost exclusively concentrated in the 20-24 and 25-34 age groups.
- ◆ In addition to the demographic effect the change in the size of the labour force is influenced by changes in participation. Overall, there was a positive participation effect of 27,800 on the size of the labour force over the year. This is also reflected in an increase in the overall participation rate from 60.1% to 60.5% over the year to Q2 2013.

The number of persons not in the labour force in Q2 2013 was 1,415,600, a decrease of 16,300 (-1.1%) over the year. Of those persons not in the labour force, the number classified as being in the potential additional labour force was 60,000, representing an increase of 2,100 (+3.6%) in the year to the second quarter of 2013.

International Comparisons

The latest available comparable figures for all EU-27 member states are for the first quarter of 2013. Data for France for Q1 2013 were not available at the time of finalising this release and therefore it can be noted that the figures calculated for Q1 2013 for the EU27, the EU15 and the Eurozone exclude French figures.

- ◆ The employment rate in Ireland increased by 1.0 percentage points to 59.3% over the year to Q1 2013. The employment rate in the EU-27 (excluding France) in Q1 2013 was 63.4%. *See table 11.*
- ◆ The unadjusted unemployment rate among the EU-27 countries (excluding France) in the first quarter of 2013 was 11.4% while the comparable rate in Ireland was 13.7%. The highest unemployment rates among the EU-27 countries (excluding France) in Q1 2013 were recorded in Greece and Spain (27.4% and 27.2% respectively) while the lowest rate of 5.4% was recorded in both Austria and Luxembourg. *See table 11.*
- ◆ The latest figures available at the time of finalising this release indicate that the seasonally adjusted unemployment rate for the EU-27 for May 2013 was 11.0% compared to the now estimated seasonally adjusted unemployment rate of 13.7% for Ireland for Q2 of 2013.

See StatBank Table QNQ14

Note: From Q1 2011 occupational estimates are now captured and coded on the basis of the newer UK SOC2010 classification. The CSO has re-coded previous quarters to 2007 inclusive on the basis of the text string captured under the old UK SOC90 classification. As with the introduction of any new classification comparability of estimates over time can be impacted - users should bear this in mind when comparing results from quarters prior to Q1 2011 to those from Q1 2011 onwards.

Note: Trends in some member states may be affected by changes in methodology

pp refers to percentage point change

Eurozone consists of EU15 states (with the exceptions of Denmark, Sweden and United Kingdom), Slovenia, Malta, Cyprus, Estonia and Slovakia.

Results for France for Q1 2013 not available - as a result figures for Q1 2013 for the EU27, EU15 and Eurozone have been calculated excluding France

Annex

Tables A1 and A2 provide estimates of the labour force classified by nationality. The figures are considered 'broadly indicative' as the very large migration flows in recent years present a significant measurement challenge in a general purpose household survey such as the QNHS. The main concerns, which are based on international experience, centre around the extent to which the survey captures minority communities in a proportionate and representative manner.

Based on the higher response levels and lower levels of subjectivity associated with the Earnings, Hours and Employment Costs Survey (EHECS) the CSO believes it offers a more reliable source for public sector employment estimates over time. Table A3 below shows these estimates of public sector employment broken down by the different high level areas within the public sector. These estimates cannot be directly compared to the total number of employees as estimated from the QNHS as contained in table 5a of this release due to the different source and minor methodological differences.

Table A3 Number of employees in the Public Sector by sub-sector and in the Private Sector

* Data amended since last publication

Table A4 Seasonally Adjusted Standardised Unemployment Rates (SUR) by month

The Live Register is used to estimate an updated Standardised Unemployment Rate (SUR) each month. These estimates are revised following the publication of the QNHS results each quarter and these revised data are presented in table A4 below. As part of the normal Live Register release process, estimates for more recent months will be subject to update once new Live Register information is used to update the seasonally adjusted series. Any such updates will be included in future Live Register releases. Further information on the Live Register and the SUR along with a full series of data is available at www.cso.ie.

Table A4 Seasonally Adjusted Standardised Unemployment Rates (SUR) by month

Month	2010	2011	2012	2013
January	13.1	14.5	15.0	13.9
February	13.0	14.4	15.1	13.8
March	13.2	14.5	15.0	13.7
April	13.5	14.4	14.9	13.7
May	13.8	14.4	14.8	13.7

Background Notes

Purpose of Survey	The Quarterly National Household Survey (QNHS) began in September 1997, replacing the annual April Labour Force Survey (LFS). The purpose of the survey is the production of quarterly labour force estimates and occasional reports on special social topics. The survey meets the requirements of Council Regulation (EC) No. 577/98, adopted in March 1998, which requires the introduction of quarterly labour force surveys in EU member states.
Reference Period	Information is collected continuously throughout the year from households surveyed each week in each quarter. Up to and including the fourth quarter of 2008 the QNHS operated on a seasonal quarter basis since its establishment in Q4 1997. As of the first quarter of 2009 the Quarterly National Household Survey (QNHS) is now undertaken on a calendar quarter basis. The reference quarters for survey results are: Q1 - January to March, Q2 - April to June, Q3 - July to September and Q4 - October to December.
Data Collection	Information is collected on laptop computers, using computer-assisted personal interview (CAPI) software.
Sample Design	A two-stage sample design is used. A new sample was introduced in Q4 2012 as a result of the 2011 Census of Population. The sample frame of households is clustered into blocks (small areas) with each block containing 60 occupied households on the night of the 2011 Census of Population. The sample frame is stratified using administrative county and population density. In the first stage 1,300 blocks are selected using Probability Proportional to Size (PPS) sampling and in the second stage 20 households are selected using Simple Random Sampling (SRS). This ensures that each household in the sample frame has an equal probability of selection and results in a total quarterly sample of 26,000 households. The actual achieved sample varies over time depending on the level of response. The number of valid responding households in Q2 2013 was 19,596. Households are asked to take part in the survey for five consecutive quarters and are then replaced by other households in the same block. Thus, one fifth of the households in the survey are replaced each quarter and the QNHS sample involves an overlap of 80% between consecutive quarters and 20% between the same quarter in consecutive years. As the new sample based on the 2011 Census of Population will be introduced incrementally across each quarter from Q4 2012 to Q4 2013, the new sample will not be fully effective until Q4 2013. The survey results are weighted to agree with population estimates broken down by age, sex and region and are also calibrated to nationality control totals. The population estimates for April of each year are published in a separate release.
Statistical significance	All estimates based on sample surveys are subject to error, some of which is measurable. Where an estimate is statistically significantly different from another estimate it means that we can be 95% confident that differences between those two estimates are not due to sampling error.
Usual residence and de facto population concepts	Up to and including Q1 2006 the annual population estimates have been calculated using the de facto definition of population (i.e. all persons present in the state). From Q2 2006 onwards a new concept of usual residence will be used, i.e. all persons usually resident and present in the state plus absent persons who are usually resident in Ireland but are temporarily away from home and outside the state.

ILO Labour Force Classification

The primary classification used for the QNHS results is the ILO (International Labour Office) labour force classification. Labour Force Survey data on this basis have been published since 1988. The ILO classification distinguishes the following main subgroups of the population aged 15 or over:

In Employment: Persons who worked in the week before the survey for one hour or more for payment or profit, including work on the family farm or business and all persons who had a job but were not at work because of illness, holidays etc. in the week.

Unemployed: Persons who, in the week before the survey, were without work and available for work within the next two weeks, and had taken specific steps, in the preceding four weeks, to find work.

Inactive Population (not in labour force): All other persons.

The labour force comprises persons employed plus unemployed.

Participation, Employment and Unemployment Rates

The rates given in this release are based on the ILO classification. The Participation Rate is the number of persons in the labour force expressed as a percentage of the total population aged 15 or over. The Employment Rate is the number of employed aged 15 to 64 expressed as a percentage of the total population aged 15 to 64. The Unemployment Rate is the number of unemployed expressed as a percentage of the total labour force.

Duration of Unemployment

The duration of unemployment is the length of time since a person last had a job or began looking for work, whichever is more recent. The long-term unemployment rate is the number of persons unemployed for one year or more expressed as a percentage of the total labour force.

Part-time Underemployment

The calculation of part-time underemployment is based on ILO and Eurostat recommendations and uses the following criteria to derive underemployment:

1. Working part-time
2. Willing to work additional hours
3. Available to work additional hours

This indicator is only available from quarter 3 2008 onwards as estimates prior to that quarter were based on one single question which included the need for the person to be looking for additional work. From quarter 3 2008 the indicator is derived from a series of separate questions which allow this requirement to be excluded.

Potential Additional Labour Force

The Potential Additional Labour Force (PALF) is the sum of the two groups 'persons seeking work but not immediately available' and 'persons available for work but not seeking'. Persons in the PALF are not part of the standard labour force, which encompasses only employed and unemployed people but however they have a stronger attachment to the labour market than other persons not in the labour force. The new indicators have been defined by the European statistical office (Eurostat) following extensive international discussion regarding appropriate indicators to supplement the unemployment rate.

Further background information regarding the methodology and approach adopted by Eurostat in building these new indicators can be found at the link below. European wide and individual country results are also available from this link:

<http://cso.ie/shorturl.aspx/134>

Principal Economic Status Classification

Results are also available using the Principal Economic Status (PES) classification which was used in the Labour Force Survey and the Census of Population. The PES classification is based on a single question in which respondents are asked what is their usual situation with regard to employment and given the following response categories:

- At work
- Unemployed
- Student
- Engaged on home duties
- Retired
- Other.

NACE Industrial Classification

The QNHS sectoral employment figures are based on the EU NACE Rev. 2 (Nomenclature generale des activites economique dans les Communautes europeennes) classification as defined in Council Regulation (EC) no 1893/2006. Fourteen NACE sub-categories are distinguished in Table 2a of this release. From Q1 2009 NACE Rev. 2 has been adopted as the primary classification of industrial sectors for use in QNHS outputs. From Q4 1997 to Q4 2008 the NACE Rev. 1.1 classification had been in use.

NACE Rev. 2 classification is more detailed than the NACE Rev. 1.1 classification. In particular more sections are now identified for services activities with the aim of better capturing economic activity within services. In cases where there is a direct one to one correspondence (e.g. section H 'Hotels and restaurants' in NACE Rev. 1.1 directly corresponds to section I 'Accommodation and food service activities' sector in NACE Rev. 2) then the two different series can be expected to be broadly comparable.

However, the series will not be exactly the same, as the process of applying NACE Rev. 2 involved a very detailed recoding process whereby the new NACE classification was applied to each record in each quarter. The detailed nature of this process means it should be expected that even in the case of a one to one correspondence between a NACE Rev. 2 and NACE Rev. 1.1 section; minor differences in the level of the estimates may be seen.

To facilitate analysis and the running of seasonal adjustment on the time series NACE Rev. 2 estimates have been produced from Q1 2004 onwards. As of Q2 2009 only NACE Rev. 2 estimates will be published.

Occupation Classification

As a result of changes to the European regulations governing the Quarterly Labour Force Survey (implemented in Ireland using the QNHS) the CSO is obliged to report occupational coding data to Eurostat based on the new Europe wide classification ISCO-08 from Q1 2011 onwards. To allow this requirement to be met the CSO has changed to using UK SOC2010 as the primary classification used in collecting the data. ISCO-08 is then derived from UK SOC2010. This change is also being implemented for the Census 2011 results.

The previously used classification for publication purposes in Ireland was UK SOC1990 and this cannot be directly compared to the new UK SOC2010 classification as all occupations have been reclassified accordingly. This newer classification reflects the evolution over a period of time of certain occupational areas which were developing rapidly, both in terms of their scale and the complexity of work organisation. One particular example which highlights the impact of these changes on published results is the reclassifying of farmers from the major occupation grouping of 'Managers and administrators' in SOC1990 to the major occupation grouping of 'Skilled trades' in SOC2010.

Results for occupations coded to the new SOC2010 classification have now been recoded for historical quarters back to Q1 2007 to provide a longer and consistent time series for users.

Further information regarding SOC 2010 is available at the link below:

NUTS2 and NUTS3 regions

The regional classifications in this release are based on the NUTS (Nomenclature of Territorial Units) classification used by Eurostat. The NUTS3 regions correspond to the eight Regional Authorities established under the Local Government Act, 1991 (Regional Authorities) (Establishment) Order, 1993, which came into operation on 1 January 1994. The NUTS2 regions, which were proposed by Government and agreed by Eurostat in 1999, are groupings of the NUTS3 regions. The composition of the regions is set out below.

Border, Midland and Western NUTS2 Region		Southern and Eastern NUTS2 Region	
Border	Cavan Donegal Leitrim Louth Monaghan Sligo	Dublin	Dublin City Dun Laoghaire-Rathdown Fingal South Dublin
Midland	Laois Longford Offaly Westmeath	Mid-East	Kildare Meath Wicklow
West	Galway City Galway County Mayo Roscommon	Mid-West	Clare Limerick City Limerick County North Tipperary
		South-East	Carlow Kilkenny South Tipperary Waterford City Waterford County Wexford
		South-West	Cork City Cork County Kerry

Seasonal Adjustment Methodology

To correct for typical seasonal patterns, the series presented in Table 3a have been seasonally adjusted. Since Q1 2011 the seasonal adjustment of data from the QNHS is completed by applying the X-12-ARIMA model, developed by the U.S. Census Bureau. Seasonal adjustment is conducted using the direct approach, where each individual series is independently adjusted. As a result of this direct seasonal adjustment approach it should be noted that the sum of any component series may not be equal to seasonally adjusted series to which these components belong, e.g. the seasonally adjusted number of males in employment and the seasonally adjusted number of females in employment will not necessarily add up to the total employment on a seasonally adjusted basis.

The X-12-ARIMA method has the X-11 moving averages process at its core, but builds on this by providing options for pre-treating the series using a regARIMA approach for prior adjustment and series extension. In essence this methodology will estimate seasonal factors while taking account of calendar effects (e.g timing of Easter), outliers, temporary changes and level shifts.

For additional information on the use of X-12-ARIMA see detailed note in the Q1 2011 QNHS release.

Reliability of Estimates Presented	<p>Estimates for number of persons where there are less than 30 persons in a cell are too small to be considered reliable. These estimates are presented with an asterisk (*) in the relevant tables.</p> <p>Where there are 30-49 persons in a cell, estimates are considered to have a wider margin of error and should be treated with caution. These cells are presented with parentheses [].</p> <p>In the case of rates, these limits apply to the denominator used in generating the rate. In the case of annual changes, both the current year and the preceding year are taken into account when deciding whether the estimate should be suppressed or flagged as having a wider margin of error.</p>
Calculation of Rates and Estimates of Change	<p>Rates and estimates of change presented in this release are calculated from whole unrounded numbers. Due to rounding, these may differ from the rates and estimates of change calculated from the rounded volumes presented in the tables.</p>
Interpretation of volume and rate changes	<p>The overall change in the number of people employed, unemployed, in the labour force and not in the labour force is a function both of changes in the population as well as changes in the proportion of people with that status. Therefore, in interpreting changes in the volume of persons who are employed, unemployed etc, both changes in population and changes in the relevant rates should be considered.</p> <p>In recent years there has been a natural decline in the number of people in younger age groups arising from the falling number of births through the 1980's until 1994 when a low of 48,255 births was recorded (compared with 74,278 in 2009). For example there were 326,030 people born in Ireland between 1982 and 1986 and, all other things being equal, these people would have been in the 20-24 age group in 2006. However between 1986 and 1990 there were nearly 50,000 fewer births which would create a natural decrease in the 20-24 age group of close to 50,000 between 2006 and 2010.</p> <p>In addition to natural changes in population, net migration has been a significant feature of population change in Ireland in recent years and net migration has also been most heavily concentrated in younger age groups. Evidence shows that migration is also most heavily concentrated in the 20-24 and 25-34 age groups. As a result of both natural decrease and net outward migration, the population of persons in the younger age groups has fallen and this should be borne in mind when considering the changes in the number of people in these age groups who are employed, unemployed and in the labour force as discussed earlier in this release.</p>
Additional Data Series	<p>Additional data series previously included in the QNHS release can still be accessed through the CSO website and are available at the link below: http://www.cso.ie/shorturl.aspx/70</p> <p>Labour market data can also be accessed from Statbank, the CSO's main data dissemination service which can be accessed through the CSO website at the link below: http://cso.ie/shorturl.aspx/78</p>
Participating Households	<p>The Central Statistics Office wishes to thank the participating households for their co-operation in agreeing to take part in the survey and for facilitating the collection of the relevant data.</p>
