

Agricultural Price Indices December and Year 2009

Agricultural price indices Annual

Unadjusted

	Output	Input	Terms of trade
	2000 = 100		
Year 2008	122.3	155.9	78.4
Year 2009	103.4	142.2	72.7
% Change	-15.4%	-8.8%	-7.3%

Agricultural output price index down 15.4% in 2009

The agricultural output price index was 103.4 in 2009, 15.4% lower than 2008. The input price index decreased by 8.8%. Thus, the terms of trade index decreased by 7.3% in 2009. *See Tables 1, 2 and graph.*

The most significant price decreases year on year were (*see Tables 1 and 2*):

- ◆ Milk, cereals, cattle and pigs were down by 30.8%, 28.9%, 10.5% and 9.4% respectively.
- ◆ Fertilisers, energy, feeding stuffs and seeds fell by 16.2%, 13.5%, 8.8% and 7.3% respectively.

On a monthly comparison, the unadjusted agricultural output price index in December 2009 was 103.7, 0.9% higher than in November 2009. The corresponding unadjusted agricultural input price index was down 0.3% to 136.6 over the same period.

Annual changes in EU output and input price indices for selected items are shown at the back of this release.

Background Notes

- Introduction** This release presents estimates of Agricultural Input and Output Price Indices and selected prices. The indices monitor trends in prices paid to farmers for their produce and in prices paid by farmers for purchases of goods and services. The methodology is harmonised throughout the EU. The estimates are given to Eurostat, the Statistical Office of the European Communities. Preliminary annual indices, based on around nine months data, are also published each November. The most recent preliminary estimates for 2009 were published on the 20 November 2009.
- Methodology** The agricultural output price indices are intended to measure trends in the price of agricultural produce sold by farmers. The agricultural input price indices are designed to measure trends in the price of farm inputs purchased for current consumption (i.e. non-capital materials and services). The weights used to combine the changes in prices of the individual commodities relate to the value of sales off farms or to the expenditure by farmers on input purchases. The value of all sales of crop products between farms (i.e. inter-farm sales) is also included, however, the value of own produce consumed in farm households is excluded. The Laspeyres index formula, involving the use of fixed base year weights, has been used in the compilation of the monthly index numbers for all commodity groupings except vegetables. Because of the highly seasonal nature of vegetables, variable monthly baskets are used.
- Monthly price series are used except for seasonal products, such as seeds, where prices are only available at certain times during the year. In these cases, the monthly prices returned during the last selling period are continued unchanged until the product can be priced again. The monthly sub-indices are weighted by the value of sales and the expenditure on farm inputs to derive overall monthly total input and total output indices. The annual indices are obtained either as a simple or weighted arithmetic mean of the corresponding monthly indices. In line with EU recommendations, the annual input indices are calculated as simple arithmetic averages of the monthly indices. The annual output indices are calculated as the weighted averages of the monthly indices.
- The agricultural terms of trade index is the output price index expressed as a percentage of the input price index.
- Price coverage** The actual prices used for the index series are based on the market price without the deduction of levies and exclude value added tax. Standardised prices are used for milk and cereals to ensure that products of identical quality are priced in successive periods. In the case of milk for manufacturing, this means pricing at a fixed butterfat and protein content and excluding special bonuses paid in respect of some deliveries to creameries. Standardised cereal prices are based on the harvest price at 20% moisture content.
- Data sources** The indices are compiled from a wide variety of sources, including direct CSO surveys and administrative data from the Department of Agriculture, Fisheries and Food. The actual sources are described more fully in the Agricultural Price Indices 1995-2003 release published on the 30 April 2004.
- Livestock auction mart prices and export factory slaughterings prices are used for both cattle and sheep. Representative licensed export premises prices are used for pigs. Poultry prices are obtained from approved processing premises. For milk, the CSO collects prices from creameries and processors. Feeding stuffs and fertilizers prices are collected through a CSO survey of merchants and co-operatives.
- Seasonal adjustment** As many agricultural products follow a seasonal production pattern, seasonally adjusted monthly series for the total indices and selected sub-indices are also published. The use of standardised prices for some commodities reduces the seasonality of these prices.
- Rebasing** These input and output price indices series are normally rebased every five years. This release shows monthly indices from January 2008 with base year 2000=100. A rebased series covering the period 1995-2003, published on 30 April 2004, contains a full note on methodology.
