

# Chapter 4

## Infant Mortality, Stillbirths and Maternal Mortality 2011

### Infant mortality

During the year 2011 there were 262 deaths of infants under one year, compared to 271 in 2010. The infant mortality rate, which was 3.6 per 1,000 births in 2010, decreased to 3.5 in 2011. See tables 4.1, 4.2 and 4.3.

**Table I Infant mortality rates in Ireland\* and neighbouring countries, 1941-2011**

Period	Deaths of infants under 1 year per 1,000 live births

## Infant mortality rates in the EU-27

Ireland, together with Denmark and France, had the middle infant mortality rate of the EU-27 (3.5 per 1,000 live births). Romania had the highest rate at 9.4 infant deaths per 1,000 live births. Sweden had the lowest rate, 2.1 per 1,000 live births. See *table II*.

**Table II Infant mortality rates in per 1,000 live births in the European Union, 2011**

Area of residence	Infant mortality rate per 1,000	Area of residence	Infant mortality rate per 1,000
Belgium	3.3	Luxembourg	4.3
Bulgaria	8.5	Hungary	4.9
Czech Republic	2.7	Malta	6.3

## Infant Mortality by detailed age

Just over a third (33.6%) of all infant deaths occurred within the first day of birth and over 56% occurred within the first week.

There were 188 neonatal deaths (deaths of infants under 4 weeks) in 2011, an decrease of 7 on the 2010 figure. The neonatal mortality rate of 2.5 per 1,000 live births was 0.1 less than the 2010 figure. See *tables 4.2, 4.3 and 4.6*.

Table III shows infant deaths by detailed age.

## Infant Mortality by cause

Certain conditions originating in the perinatal period accounted for 38.9% of infant deaths in 2011. Congenital malformations, deformations and chromosomal abnormalities accounted for a further 44.3%, sudden infant death syndrome accounted for 7.6%. Diseases of the nervous system and sense organs accounted for 1.9%, and all other causes at 7.3% accounted for the remainder. See *table 4.6*.

For infant deaths occurring in the first day of life, the causes of death were split between certain conditions originating in the perinatal period (58%) and congenital malformations, deformations and chromosomal abnormalities (41%) with sudden infant death syndrome accounting for the remainder. See *table 4.6*.

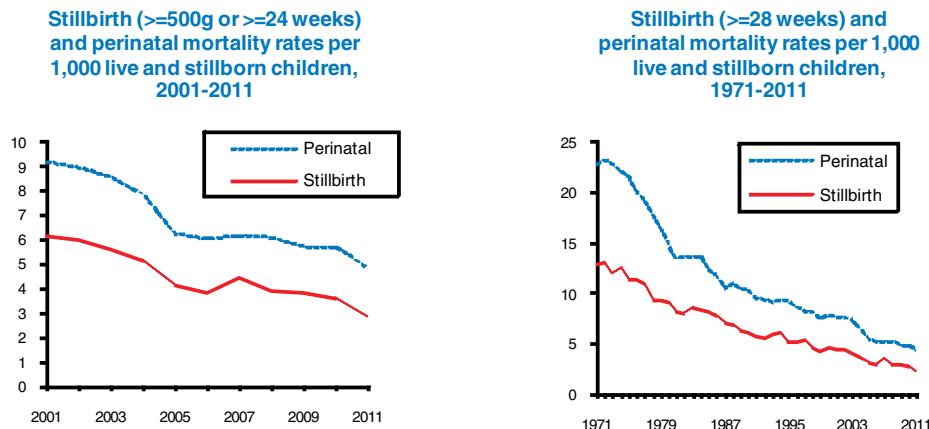

Limerick City had the highest rate for infant mortality in 2011 with a rate of 7.9 per 1,000 births. The lowest rate occurred in Longford with a rate of 1.6. See *table 4.3*.

## Stillbirths

The number of stillbirths in 2011 was 211, a decrease of 62 on 2010 total of 273. The corresponding rate decrease was from 3.6 in 2010 to 2.8 in 2011.

For stillbirths, the highest rate per 1,000 live births was in Waterford County (7.1) and the lowest was in Cork City with a rate of 0.0 reflecting no registered stillbirths in 2011. See table 4.3.

In 2011, stillbirths classified as being due to certain conditions originating in the perinatal period accounted for 84.8% of the stillbirths and 15.2% were due to congenital malformations, deformations and chromosomal abnormalities. See table 4.10a.

While statistics of infant mortality are obtained in the course of the usual procedure for registration of deaths, which has been in operation since 1863, particulars of late foetal mortality have been obtained through a scheme of notification to the Directors of Community Care. The scheme of notifying late foetal deaths was introduced in 1957, but comparisons between different areas of the country showed marked differences in the coverage of the scheme in the early years. Consequently, the number of late foetal deaths in the early years of the scheme is believed to be understated.

In 1995 stillbirths were registered in Ireland for the first time under the Stillbirths Registration Act, 1994. The definition of a stillbirth under the Act is broader than the definition used for late foetal deaths in previous Vital Statistics Reports. Care should be taken in comparing statistics on stillbirths and late foetal deaths in consideration of the changes between the notification and registration systems.

The National Perinatal Reporting System (NPRS) ([http://www.esri.ie/health\\_information/nprs/](http://www.esri.ie/health_information/nprs/)) also produces statistics on stillbirths, which can be compared to the numbers in these reports. The NPRS figures are derived from birth notification forms, rather than from stillbirths registered. In recent years, the numbers of stillbirths according to NPRS reports have been higher than the numbers published in these reports. This suggests that there is some non-registration of stillbirths and that caution should be taken in interpreting the statistics on stillbirths in these reports.

## Pregnancy, childbirth and puerperium

There were 2 maternal deaths in 2011. Table IV compares Ireland and the neighbouring countries for the years 1993-2011.

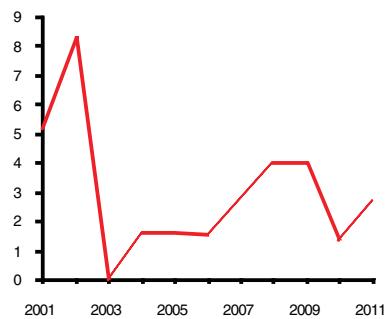

**Table IV Maternal deaths per 100,000 total live and stillbirths in Ireland<sup>1</sup> and neighbouring countries, 1993-2011**

<sup>1</sup> Exclusive of Northern Ireland.

\* One maternal death which occurred in 1993 was registered in 1995.

**Maternal death rates per 100,000 live births, 2001-2011**

**Maternal death rates per 100,000 live births, 1941-2011**

## **Stillbirths, Infant Mortality and Maternal Mortality**

The terms used in relation to stillbirths and infant mortality are defined as follows:

**Stillbirth:** Stillbirth weighing 500 grams or more or at gestational age of 24 weeks or more. This definition applies to stillbirth figures from 1995 onwards.

**Late foetal death:** Foetal death at or over 28 weeks gestation. This definition was applied up to 1994 inclusive.

**Early neonatal death:** Death at ages under 1 week of live born infant.

**Perinatal deaths:** Stillbirths or late foetal deaths plus early neonatal deaths.

**Late neonatal death:** Death between the ages of 1 week and 4 weeks of live born infant.

**Neonatal death:** Death at ages under 4 weeks of live born infant.

**Post neonatal death:** Death between the ages of 4 weeks and 1 year of live born infant.

**Infant death:** Death at ages under 1 year of live born infant.

**Maternal Death:** A maternal death is the death of a woman while pregnant or within 42 days of termination of pregnancy, irrespective of the duration and the site of the pregnancy, from any cause related to or aggravated by the pregnancy or its management, but not from accidental or incidental causes.

**Stillbirth rate:** Stillbirths divided by total live births plus stillbirths, multiplied by 1,000.

**Late foetal mortality rate:** late foetal deaths divided by total live births plus late foetal deaths, multiplied by 1,000.

**Early neonatal mortality rate:** Early neonatal deaths divided by total live births, multiplied by 1,000.

**Perinatal mortality rate:** perinatal deaths divided by total live births plus stillbirths, multiplied by 1,000.

**Late neonatal mortality rate:** Late neonatal deaths divided by total live births, multiplied by 1,000.

**Neonatal mortality rate:** Neonatal deaths divided by total live births, multiplied by 1,000.

**Post neonatal mortality rate:** Post neonatal deaths divided by total live births, multiplied by 1,000.

**Infant mortality rate:** Infant deaths divided by total live births, multiplied by 1,000.

**Maternal death rate:** Maternal deaths divided by total live and stillbirths multiplied by 100,000

<sup>1</sup> 4 year average.

<sup>2</sup> Decennial average.

<sup>3</sup> 5 year average, 1966-1970.

<sup>4</sup> The population estimates for year ending April 2007 and later periods are based on the usual residences concept.

<sup>5</sup> Figures on stillbirths up to 1994 inclusive refer to the definition of late foetal deaths at or over 28 weeks gestation. From 1995 the figures relate to the new broader definition of stillbirths at or over 500g or at a gestational age of 24 weeks or more. For comparison purposes, figures according to the old definition are given in brackets from 1995 onwards.

<sup>1</sup> 4 year average

<sup>2</sup> Decennial average

<sup>3</sup> 5 year average, 1966-1970

<sup>4</sup> The population estimates for year ending April 2007 and later periods are based on the usual residences concept.

<sup>5</sup> Figures on stillbirths up to 1994 inclusive refer to the definition of late foetal deaths at or over 28 weeks gestation. From 1995 the figures relate

to the new broader definition of stillbirths at or over 500g or at a gestational age of 24 weeks or more. For comparison purposes, figures according to the old definition are given in brackets from 1995 onwards.

\* For definition see glossary at end of commentary, page 100.

The stillbirth and infant mortality rates in some areas based on small numbers are subject to considerable fluctuation and caution should be exercised in their interpretation, see reference on page 98.

**Table 4.4 Infant mortality rates per 1,000 live births by detailed age, 1941 to 2011**

Period	Under 24 hours	1-6 days	7-13 days	14-20 days	21 days and under 4 weeks	4 weeks and under 2 months	2 months and under 3 months	3 months and under 6 months	6 months and under 12 months	Total 4 weeks to 1 year
